AS

T, pl reply that Mr Bennett, give
him Mr A's name and say we will be pleased
to see him when he wants to come.

2. Did the letter come I think
the circulating mail in the same
way as other 1/0 letters do?

11/1

(5)

A.S.

R100 is now to dev. I,
Have an action 3000 wats as to take?

3/4

(6)

C.S.

I have spoken to S.M.O.

P100 is principally for information. Dr Ashmore pointed out, however, that previous medical surveys in the colony (i.e. in connection with T.B. and the ophthalmic survey) were authorized in Ex. Dec., and that if Ex. Dec. were to agree now that a survey in connection with syphilitic disease should be carried in the colony during 1974, he could start setting the wheels in motion during his forthcoming leave to Britain (which is what he intended to convey by p. 100 also).

§

4.4.73.

(7)

A.S.

Good. For mention in Ex. Dec. pt.
Please note sure I don't forget.

5/4

(8)

10 16/4

Extract from Ex. Dec. meeting 3/73 now filed at -p. 101.

(9)

RSC

Your views on R102 pt.

(10)

Q.E.

Before proceeding with the amendments I would point out for your consideration that the maximum penalty for the most serious offences under the Diseases of Animals Act has in recent years been increased from £50 to not exceeding £200. 28.8.73.

7/8

(11)

RSC

Your (10) noted. I assume your point to be that you consider §(iii) should be reduced to £500.

Z. E.

(12)

Draft amending Order attached pl.

I consider the penalty of not less than £250 too high when compared with the highest penalty to be imposed under the Diseases of Animals Act. The law, without exception to my knowledge, provides a maximum penalty not a minimum one.

I have altered the wording which should cover the same points.

J. B.

15. VIII. 73.

(13)

Peter

Al show R102 and draft at face to O of Agric & ask for his views.

27/8

Reg. ~~28~~

(14)

There is another letter for
Filing I think.

27/8

Peter

(15)

R102 I have no comments on the draft Order but think it would be a good idea if it was shown to Mr. Miles before it goes to Council

for J.O./c As Dept.

(16)

C.S.

Are we now going to take R103 to Exco in Oct?

(17)

10/9

Y/E

The sooner the amendment is made the sooner control measures can be enforced.

May I place on the Agenda pl?

11.9.73

(18)

C.S. Yes pl. The file to RSC to see subsequent correspondence.

(19)

11/9

Clark Exco

Pl add to Agenda R103

Hg. C.S.

The process of amending the Dogs Order, to take account of recommendations made by the S.O.A., has now been completed.

2. There is still the question of a survey of the population in connexion with the control of hydatid disease (pp 100 & 101A and minutes 5-7 refer) running on this file. I am not sure of the present position regarding this.

§

" Dec 73

BU 15/1/74

yes

will have seen p. 121 in the float.

I think both you and Inspector Beck intend referring to the hydatid eradication campaign during meetings with the S.O.A. later this week, and the subject is on the Agenda for discussion by the Association.

The proposed amended circular would best issue after the meetings when any further amendments recommended by the Association could also be incorporated?

§

8. 7. 74.

b. b.

I intend to refer to this in general and the b. p. o. will I hope go into more detail.

Order signed & advised.

Order signed & advised.
Action is now required to appoint inspector
(para. 2) ?
Attn: 22/7

22/7

Now that the Order No.2 of 1975 for the control of dogs has been made and promulgated you should look urgently into the question of compiling a complete list of all inspectors in accordance with para 2 of the Order.

p. 50 in AGR/10/4

2. There is already in existence a list of such inspectors but it may be as well to reappoint them.

3. Will you also prepare for my consideration a backup pamphlet to send to all managers and inspectors in accordance with the last paragraph of minute 3 of Executive Council Meeting 5/75. (It is at folio 466 on AGR/10/4)

4. By copy of this minute AS is please to arrange for publication of the Order.

5. I shall be grateful, too, if AS can arrange to have AGR/7/12 C and AGR/10/4 sorted out. There is considerable confusion between the two files.

CS
24.7.75

44

AG: Mr S. Miller, Chairman of the Hydatids Committee has been asked by that committee to give publicity to the new Dogs Order, by e.g. a broadcast talk.

45

AS
(122). No copy of attachment to (119) was retained on file. M. draw attention of staff to appropriate section in 'Manual'.

AG 10/8/75

Dr Gemmell

He will be met and accommodated by Mr Miller as Upland Goose Hotel is full.

Monday pm See H.E.

Monday evening Hydatids Committee meeting in Secretariat

Tuesday Fly to Darwin with Mr S Miller

Wednesday Fly to Port Howard with Mr Miller

Thursday Fly to Port San Carlos with Mr Miller

Friday Return to Stanley

Friday evening Public meeting in Town Hall. Dr Gemmell has slides he could show

Saturday Interviewed by Mr S Miller and Dr Cox

Saturday See H.E.

Sunday Free

Monday Depart.

Y.E.

Above is Mr Miller's provisional programme for Dr Gemmell.

Mr Miller has inserted ~~two~~ visits to Y.E., one when Dr Gemmell arrives and one before he departs. Would this be convenient to Your Excellency please?

Mr Miller who is something of a pioneer in the campaign to eradicate this scourge, thinks he should accompany Dr Gemmell on his Camp visits, rather than just putting him on the 'plane and leaving him to it.

(Pass booked, with P.W.D.)

Yes.
I agree
28/11

27.11.75

Yes Thank you As
proposed. We have
spoken about the possibility
that Dr Gemmell's departure
may be delayed until Tuesday
= 2 December. All things 28/11

49

✓ 50

Pl see (128) for Dr Gemmell's programme
Don 1/12

50

Don 1/12. I shd like to see him if possible.
Who is paying for him. Did he get a sponsor?

Don 1/12

51

AS

This file was removed from my office,
but I remembered that the Monk
wished to see Dr Gemmell and I checked
this with you, and you said that the CS
had attended a Hydatids Meeting.

2. Do you know (as Sec of the Cmtee) the
answers to the CS's other questions?

Don 10/12

52

C.S.

I have spoken to Mr Miller. He thinks that
Dr Gemmell's focus CR/Sunday/ etc and around the
camp will be government commitments.

8
11.12.75

53
Des

Pl. ex (29) for possible action in future or A. H.

5/12/12

54

Noted. 22/12

55

AS
Do you need this for anything?
How about para 5 of 44?
22/12/12

56

Carolyn

Please see para 5 of minute 44.

Do you as Registry Clerk deal with this, or
is it within Peter's province? To be attended
to by the appropriate officer pl.

22.12.75

57

AS -

We spoke about 44 - there are
so many files in this subject. You
said you'd talk with CS-
12/1/76

58

R/ This file and FIS/2/A should pl. be
amalgamated soon. They deal with the same
subject. Papers should be transferred in date
order.
5.7/4/76.

1.

Bdy 25.11.75

(15.12.75 - new
list of inspectors
to be prepared)

C.S.,

The appointments of the dog inspectors lapsed when the new Dogs Order was made earlier this year.

2. The former list of inspectors has now been up-dated and agreed by the C i/C Agric. Dept. and those listed (except in the case of Mr E Goss - pl. see p. 8 in this regard. I understand that Mr Goss is to move to Goose Green replacing Mr R Lee, and as he is a useful chap to have as an inspector recommend that he remains on the list).

Please see pages 36, 36A, and 37 for the up-dated list which is submitted for approval.

3. After the list has been approved I will have prepared a Notice similar to that at p. 445.

[Signature]

15.12.75

2.

A.S.

Your 1. The list of inspectors at centre may be published. Will you please proceed accordingly.

Do you consider it necessary that we should follow-up publication with individual lettst to each inspector setting out his conditions of appointment and powers?

[Signature]
C.S.
16.12.75

3.

C.S.,

Gazette Notice at centre for signature pl.

2. While almost all those now being gazetted as inspectors have already served as such under the previous Order and individual letters are probably therefore unnecessary, I think that as this is all a "spring-cleaning" exercise it would be a good idea to issue them.

[Signature]
23.12.75

4.

AS.
Enlight.
5/3/12
5/3/12
Should you revoke the previous Order?
Notice 2

C.S.,

- 1/ I am advised that the previous appointments lapsed on the revocation of the 1970 Order pl.
2. The matter of the 'prescribed' method of treating dogs has yet to be settled. The relevant file - Eradication of Hydatid Disease - is with you I think?

5bis

§

5.1.76

Since writing the above minute, the Registry has produced to me the two files attached. Please see para 3 of (3) in FIS/1/13 with regard to the instructions to be issued to dog inspectors. I think Mr Miller came to see you after he received the letter and discussed it with you.

§

12.1.76

6

AS

5 Thank you. I agree with A/Sut has the 1970 Order been revoked?

Pl. proceed to Sydney (38).

N. v. E. 5 bis / do not recall Mr. Miller speaking to the query in 93 of FIS/1/13(3). Perhaps you will enquire?

2 5.3.76

C.S.,

I spoke to Mr Miller. He thinks he did mention the matter to you. The question of 'prescribing' sedation under the Order and the instructions to be given to inspectors should go to the next pl? § 20.1.76

Yes. pl. see para 13 of Order 2/75
Arranged

18.2.76

~~PS~~ I Thank you. I have sent on A.R./10/4.

11th Jan 1971

Dear Sir,

Enclose the Dec 31st certificate.

For the future, would you please include as 'inspections'
on this station; W. Goodwin and T McEhie, both of
whom are subside shepherds, and are willing to
undertake the title of inspector for Hydatids.

Yours faithfully

David Miller

C.S.

While I agree it is an excellent idea to have two inspectors on each farm, to cover leave etc. (Goodwin was appointed for his purpose) I would not recommend the appointment of additional inspectors. If we are not careful we could find ourselves with the ridiculous situation where all outside depend on inspectors!

J.P.
8.2.71.

M. Agree.

I agree. But we have an appropriate draft reply.

[2 On its way back to me P/C should have a new jacket put on this file.]

12th February

71.

Dear Sir,

353

I refer to your letter dated 11th January 1971, regarding the appointment of additional inspectors for the control of Hydatid Disease.

2. The appointment of two inspectors to each farm, is at present considered adequate.
3. At your request Mr W. Goodwin was appointed to the Roy Cove area on 30th June 1970 - Gazette Notice No. 25 refers.

Yours faithfully,

(H. L. Bound)
COLONIAL SECRETARY.

Mr. S. R. Miller,
Roy Cove,
Falkland Islands.

STANLEY.

Tapeworm Eradication (Dogs) Order 1970.

357
With reference to your memorandum 160/43/III of 23rd April 1971, you are aware as I am that the law can be enforced provided evidence is forthcoming. Do you have evidence enabling you to prosecute anyone?

2. However, it has been recognised, from the start of the hydatid campaign, that the annual mass slaughterings would present an almost insoluble problem and I think one needs to distinguish between that, once annual, occurrence and the situation represented by continual breaches of the law.

LEGISLATIVE COUNCIL 17th MAY 1971

QUESTIONS FOR ANSWER

Question No. 2/71

Is Government satisfied that the Hydatid Eradication Programme is operating satisfactorily and that the control measures required by law are being adequately met in all areas?

Answer

I have no specific evidence to the contrary. However, particular complaints based on evidence can be investigated.

17/1 Agne

Dosing of Dogs

The arrangements for this have, as we intended, become automatic, & broadcast notices & quarterly dosing arrangements continue to be made as a routine? I fear I have not personally checked recently.

When is the next quarterly dosing due?

C.S.

Quarterly Dosing and relative broadcasts are now automatic.

2. The next dosing period is 1st October. Scolaban Tablets for this exercise will be delivered by the mail-drop after Darwin's return on the 12th inst.

SK. 7/9

T. G.

? Schoolbag supplies are adequate. You will need to bear in mind that next year you can only expect to receive supplies occasionally by "AHS", though no doubt arrangements could be made for lifts by B.A.S. ships. It would be worth your while considering whether you should not, in the circumstances, place a whole 12 months order as a single bulk indent in advance. This might need H's agreement in the imminent absence of an S.F.C. but I would be prepared to make the necessary recommendation to him if, after consideration, you decide to go ahead with it & pass it up to me with the necessary financial & other relevant detail.

2 Let this paper be put in appropriate file & matters dealt with there.

STANLEY

Dear Sir,

TAPEWORM ERADICATION (DOGS) ORDER 1970

The following Company Inspectors have now retired and left the Colony and we should be obliged if you would kindly delete their names from your list of Inspectors:

Mr. R.G. Vinson
Mr. J.T. Clement

We would propose the following as Inspectors in their place:

Mr. B. Hardcastle Goose Green
Mr. J.R.S. Felton Fitzroy

During the absence of Mr. K.J. McPhee, Manager, Green Patch, we would propose the name of Mr. E. Reive as a temporary Inspector in his absence.

Yours faithfully,

Hydatid Disease Control Campaign

You will recall, from your visit here earlier this year, that we use the drug Scolaban in connection with our Hydatid disease control campaign. It is understood that in New Zealand now a new drug Yoemasen is widely used in place of Scolaban.

2. I should be grateful for your advice and, if you consider it appropriate, advice from the New Zealand authorities, as to whether we should seriously consider replacing the use of Scolaban in our campaign with Yoemasen. Apart from any question of effectiveness of the newer drug we shall need to take into account the fact that, because of the paucity of our communications, we have built up our stocks of Scolaban so that they are now adequate to carry us up to at least the end of 1972. In these circumstances there is no great urgency over the question of the possibility of switching to the new drug.

Hydatid Disease Control: Informative LiteratureThank you for your ⁷⁹letter of the 22nd October.

2. I think our Campaign Committee will find it difficult to specify the leaflets and posters, other than those which we have already received. Owing to the distance which we are from New Zealand, and to the slowness of our communications with that country which are inevitably routed through third countries, we are really very much in the hands of outside experts. I would therefore be grateful if supplies of informative material which you and the New Zealand High Commission consider suitable for our circumstances could be sent to us. My general impression so far is that, provided such material is not too sophisticated, it is both of use and interest.

STANLEY.

Dear Sir,

Hydatid Serum

I noticed an interesting article recently on the subject of Hydatid disease in a copy of a New Zealand magazine. The magazine is the New Zealand Meat Producer of February, 1970. The article deals with a cure for Hydatid disease by means of a two part vaccine, copy of this article is enclosed for your information.

Apparently this was mentioned at this year's S.O.A. meeting and Mr. Hardcastle was asked to write to New Zealand for further information. This Mr. Hardcastle has done, but to date no reply has been received. In the circumstances it might be worthwhile to make an official approach either to the National Hydatids Research Unit at Dunedin or to the Medical Research Council of New Zealand.

The editor of the magazine is Mr. A. K. G. Riddell and the address of the magazine is :-

The New Zealand Meat Producer Publishing Co. Ltd.,
P. O. Box 2711, Wellington.

Dear Sir,

Hydatid Disease

Thank you for your letter of the 23rd of December 1971. We will certainly make enquiries about this matter.

2. Meanwhile you will no doubt have particularly noted paragraph 3 of the extract you sent me. The vaccine is unlikely to be perfected for field use for several years.

3. You are also no doubt aware that no research in depth into the Islands form of infection and manifestation has been made so that it is not necessarily the fact that the vaccine being developed in New Zealand would be effective here. It must certainly be assumed that extensive trials would be necessary, and trials without basic research could be inconclusive.

Hydatid Disease

I enclose a ⁸⁶copy of an extract from the 'New Zealand Meat Producer' issue of February 1970 and would appreciate being advised:

- (1) Whether it can be stated as of now that the vaccine being developed in New Zealand would be effective against the manifestations of hydatid disease in the Colony;
- (2) whether it could normally be expected that properly conducted trials (i.e. by qualified veterinarians) in the Islands could be expected to establish the efficiency of the ~~accine~~ ^{drug} in Colony conditions; or
- (3) whether in-depth basic research into the disease in the Islands, including the compilation of accurate statistics, is a pre-requisite for any firmly based scientific assessment.

2. This letter is sent to you in triplicate to enable two copies to be passed to the Principal Veterinary Adviser in the Overseas Development Administration who may perhaps wish to consider whether it is worth sending a copy, even if only for information, to Mr. T. McCrea who was the veterinary member of the O.D.A.-sponsored Agricultural Advisory Team which visited the Colony in 1969/70, who has the best first-hand knowledge of the disease and its manifestations in the

/Falkland Islands

Reply at 88

Falkland Islands and who materially assisted in the establishment of our current (though to my mind by no means 100% watertight) control campaign.

Extract from the "New Zealand Meat Producer" of Feb. 1970.

New Hydatid Serum Discovered

The complete eradication of hydatids in New Zealand has become a possibility with the development of a new vaccine by the scientists at the National Hydatids Research Unit at Dunedin.

The serum when administered to a three-month-old dog followed by a booster threemonths later, will immunise against the three major hydatids species.

All the applied work on the vaccine has now been completed but it is likely to be several years before the laboratory vaccine is perfected for field use.

Mr. M. A. Gemmell, the director of the research unit, which functions under the Medical Research Council of New Zealand and the University of Otago at Taieri and the Otago Medical School, said further research would require cooperation with several Australian universities.

The revolutionary aspect of the vaccine was that it attacked the hydatids life cycle at two points, whereas drugs used up to now had only been able to eliminate the tape-worm from the gut of the dog.

The new serum immunised the dog and sheep against infection as well as killing any existing cysts in the sheep.

Bu. 18.2.72.

Hydatid Disease

I received in yesterday's mail a personal letter from Terry McCrea, the veterinary member of the five-man agricultural team led by Davies. Among other things he mentioned to me that he had recently seen in the British Veterinary Journal an article on hydatid disease in camels. Reading it jogged his elbow and he would like to write something for the Journal on hydatids in Falkland Islands sheep and cattle. On the supposition that he does so he asks if he can have our permission to publish provided he clears it with Thorne, the PVO in ODA. I propose to reply that he can do so.

J.A.J.

Dear John

HYDATID Disease

1 Please refer to your letter of 3 January asking for information in regard to the new vaccine which is being developed in New Zealand to combat Hydatids.

2 Your request has been referred to our Agricultural Adviser who is obtaining information about this new development in Hydatid disease control from New Zealand. Meanwhile he confirms that, if the vaccine is found to be satisfactory in New Zealand, it would probably be effective in Falkland Islands as well, but this can finally be established by relatively simple field trials. He points out however that the press release which you quote indicates that the vaccine may not be perfected for field trials for several years and in the meantime the campaign to control Hydatid disease in the Falklands will have to continue along present lines.

3 I will pass onto you any further information which is received following the enquiries being made in New Zealand.

Yours ever
George.

(G F Kinnear)

Dear Mr Jones

HYDATID DISEASE

Further to your letter of 3 January, I have now received a number of reprints concerning vaccination against hydatid disease which indicate that the vaccines so far produced are of experimental value only. The Director of the New Zealand Hydatid Research Unit confirms this opinion, and says that the development of a practical vaccine will take some years.

With kindest regards,

Yours sincerely

John Davie

The Colonial Secretary,
Stanley.

Dear Sir,

DCG DOSING INSPECTORS.

Mr.R.Morrison, inspector at Goose Green, is retiring to Stanley in May and Mr.S.Morrison is being transferred to Walker Creek.

I would recommend therefore that two new inspectors be appointed for Goose Green. I put forward for your consideration Mr.A.T.Blake manager designate and Mr.H.L.Whitney head shepherd. Mr.Whitney is at the moment on leave in the U.K. Both parties have however indicated to me verbally that they are willing to take the job on.

Yours faithfully,

B. Hardless M.

HYDATIDS COMMITTEE

(66) 93

Minutes of the seventh meeting of the Committee held on Tuesday, 25th July 1972, in the Conference Room, Secretariat, Stanley.

Present: Mr. S. Miller, J.P. - Chairman

Mr. L. G. Blake, J.P.
Mr. L. J. Butler
Mr. H. T. Luxton

Dr. J. H. Ashmore, J.P.
Mr. D. M. Pole-Evans, J.P.
Mr. R. M. Pitaluga

Clerk: Mr. R. Browning

1. The minutes of the sixth meeting of the Committee held on the 22nd July 1971 were confirmed.
2. Matters arising from the minutes of the previous meeting -
 - a) The Committee noted that there had been complaints from dog owners that on occasions Scolaban had proved fatal when administered to bitches heavily in pup. It was understood that the Sheep Owners Association were dealing with the matter.
 - b) The Secretary was asked to write to Mr. B. Hardcastle at Darwin, and enquire whether he had yet to hand any further information regarding the drug YOBENASAM which is said now to be largely used in New Zealand instead of Scolaban.
3. It had been reported that the offal disposal pit at Fox Bay West was leaking. Effectual repairs had now been made to the pit and the position was regarded as satisfactory.
4. The presence of cysts on the livers of upland geese had been noticed. Such veterinary opinion as had been available had indicated that the cysts could not be hydatid cysts. It was agreed that specimens could be sent to the Senior Medical Officer for investigation.
5. The Committee then discussed the general situation with regard to the hydatid eradication campaign in the Colony. Information was given to the Committee showing that on at least one farm the incidence of the disease among sheep had not lessened (it was in fact reported to be about 90%), it also showed that cattle were seriously affected.

Members expressed themselves reasonably satisfied with the present position. The Senior Medical Officer was, however, somewhat disappointed with the latest trends and wondered whether the Scheme was being operated satisfactorily.
6. In order to re-inforce the eradication campaign the Committee directed that the information leaflets recently received from overseas should be distributed throughout the Colony; and further, recommended that Government should arrange for inspectors to make periodic visits to farms, more particularly when the dosing of dogs is in progress, in order to ensure that all requirements are being fulfilled.
7. It was felt that the public should be advised that they were free to address the Senior Medical Officer on any matter dealing with hydatidosis, and the measures being taken to combat it; and that any questions or complaints would be dealt with by the Senior Medical Officer in strict confidence. The Secretary was asked to arrange for a suitable news item to be prepared and broadcast on Friday, 28th July.

The Colonial Secretary,
Stanley.

Dear Sir, ⁷⁴
Thank you for your letter dated 21st September.

I wrote to New Zealand almost exactly twelve months ago, asking for information about Yoemasan, but have received no reply.

I would suggest that an official letter be written from your office to the Hydatids Reserch Unit, Taieri, Dunedin, asking for information.

This could be coupled with a query about the latest developments of the hydatids vaccine as suggested in the Colonial Managers letter to you dated 23rd. December 1971.

I regret that I have been unable to produce any further information about Yoemasan, but I am certain that an official letter will bring a prompt reply. I suggest that my original letter may have gone astray,

Yours faithfully,

B. Hardcastle

A Justice of the Peace.

16th October

72.

Dear Sir,

For some time now concern has been felt here at the relatively high incidence of hydatid disease among the people of these Islands. In an effort to combat the disease an Hydatids Eradication Campaign was mounted some two years ago, and a committee was formed at the same time to give stimulus to the campaign and to attempt to educate public opinion on the subject.

2. Among the anti-hydatid measures adopted was a regulation to forbid the feeding of offal to dogs and to require all dogs in the Colony to be dosed every three months with Scolaban.

3. It has been reported to the Hydatids Committee that a more effective drug, namely, Yoemason is now largely used in New Zealand instead of Scolaban for dosing dogs.

4. I should be grateful for any information you can give me regarding this new drug. I would also welcome the latest information on developments in the field of anti-hydatid vaccine.

5. Whatever information and advice you can give on these matters will be greatly appreciated.

Yours faithfully,

R. Browning, Esq.,
Colonial Secretary,
Colonial Secretary's Office,
Stanley,
FALKLAND ISLANDS

Dear Sir,

Your letter AGR/7/12 retreatment for hydatidosis

The drug of choice at the present time is Scoloban (Bunamidine hydrochloride - Burroughs Wellcome). The recommended dose rate is 50 mg. base/kg. given on at least two occasions.

Yomesan (Niclosamide - Bayer Fabriken) has very limited hydatid activity and is being used in New Zealand for the treatment of cysticercosis (Taenia hydatigena and T. ovis) in dogs. At this stage, it is not recommended for the treatment of dogs with Echinococcus granulosus.

There are a number of new drugs being developed for the treatment of E. granulosus in dogs and some of these are likely to be marketed within 2 years.

Immunization as a practical technique is unlikely to be developed for at least another 5 years. It follows that regular treatment of the dog with drugs together with a strong educational programme remains the primary method for control.

It may interest you to know that pilot control schemes have been initiated in the Department of Flores in Uruguay and in the Province of Neuquen, Argentina. The former uses an educational approach with a test of the dogs with arecoline hydrobromide once a year and the latter uses a 6-weekly dosing programme as the main weapon of control. Both are being watched quite closely to see whether they can reduce the prevalence of hydatidosis in man. Other schemes include Bulgaria, Cyprus and Peru. The first two use dog control with massive reduction of numbers as the main control measure and the last named will follow the Uruguayan or Argentinian models.

I have recently revisited Latin America as a short-term consultant for the Pan American Health Organization and am hoping to return to Peru next year. I would very much like to examine the Falkland scheme next time I am in the region, since this is one scheme which has not been brought to the notice of the World Health Organization. I would appreciate it, if you could put me in touch with the Chairman of the Control Committee.

Yours faithfully,

The Senior Medical Officer,

Stanley, Falkland Islands.

SUBJECT :-

Hydatid disease in humans

In view of the forthcoming meeting of Ex. Co. I felt I would like to put my thoughts to you, on paper.

The earlier tests were, in my opinion and in the opinion of Dr. Liston and Prof. Nelson, prematurely and inefficiently carried out. My report of 1970 refers.

I consider a full Casoni and Serological test should be instigated next year - probably following my talks whilst on leave and the visit of Dr. Evans in September - in which Dr. Cox, who is so interested in the subject, could help in the investigations.

HYDATIDS COMMITTEE

Minutes of the eighth meeting of the Committee held on Friday,
3rd August 1973, in the Conference Room, Secretariat, Stanley.

Present: Mr S. Miller, J.P. - Chairman

Mr L. R. Anderson
Dr F. C. Cox
Mr L. J. Halliday
Mr W. R. Luxton

Mr L. J. Butler
Mr J. R. S. Felton
Mr R. W. Hills
Mr J. Robertson

Clerk: Mr R. Browning

1. The minutes of the seventh meeting of the Committee held on the 25th July 1972 were confirmed.
2. Matters arising from the minutes of the previous meeting -
 - a) The Committee noted that the practice of feeding dogs on upland geese continued notwithstanding that the presence of cysts on the livers of geese had been noticed. While veterinary opinion suggested that such cysts could not be hydatid cysts, it was recommended that specimens should be sent to the Senior Medical Officer for analysis.
 - b) It was felt that any questions or complaints regarding the measures being taken to combat hydatid disease could more properly be addressed to the Chief Police Officer rather than to the Senior Medical Officer.
3. The Chairman told the meeting that the hydatids eradication campaign had been discussed at the recent meeting of the Sheep Owners' Association and that the present meeting of the Committee had been called to consider, amongst other things, certain proposals made by the Association, namely,
 - i) that Government should arrange periodic visits to farms by inspectors who would report to Government regarding the observance of anti-hydatid measures. The object of such visits would be primarily to encourage the strict enforcement of the regulations introduced to combat hydatid disease. The Committee discussed the suggestion and endorsed it.

In this context, it was felt that the Chief Police Officer could with advantage be appointed an inspector with clearly defined powers to enter upon farms and inspect and report, and where necessary take appropriate action;
 - ii) that the law relating to hydatid control measures should be tightened up and amended in the following respects:

In the Tapeworm Eradication (Dogs) Order 1970:

 - a) Paragraph 4. Delete the words "free of charge" and substitute "at cost, except in Stanley where the purchase of a dog licence is required".
 - b) Paragraph 9. Delete and replace with the following -

"Any police officer may, for the purposes of ascertaining that the provisions of this Order are complied with, at all reasonable times, enter on any land or premises for that purpose".
 - c) Add the following new paragraphs -

"No person shall knowingly leave within the actual confines of any farm settlement or within one mile of any human habitation any animal carcass from which all viscera has not been removed beyond the reach of dogs.

Any person who contravenes or fails to comply with the provisions of this Order shall be liable to a fine of not less than £250".

After fully discussing the matter the Committee recommended the adoption of the proposals.

The Chairman/

The Chairman then undertook to report to the Sheep Owners' Association that the Committee supported their recommendations.

4. The Committee noted the figures relating to the incidence of hydatid cysts in sheep killed at the Stanley Butchery during the previous three years, which were:

Year/ended	30. 6. 71	36% (10-month period only)
Year/ended	30. 6. 72	40%
Year/ended	30. 6. 73	42.6%

Members felt that a falling-off in the incidence of hydatid cysts found in sheep could not be expected for several years yet.

Mr Miller told the meeting that while he had been around the Camp recently in connexion with the export of sheep to Argentina he had found time to make several brief visits ashore in his capacity as Chairman of the Hydatids Committee but had not seen anything untoward as far as hydatid control measures were concerned.

5. The Chairman informed members of a letter dated 8th December 1972 which had been received from Dr Michael A. Gennell of the University of Otago Medical School, Dunedin, New Zealand, and which gave information regarding Yomesan and other drugs used in the treatment of dogs with Echinococcus granulosus and also indicated that the writer of the letter might visit the Colony during 1973 to examine the hydatids eradication scheme which had been mounted here. The Chairman said that he had replied to the letter extending a welcome to Dr Gennell. Nothing further had, however, been heard from him.
6. The Committee discussed the question of hydatid serum. During the discussion it was learned that immunization as a practical technique was unlikely to be developed for some years, and it followed therefore that regular treatment of dogs with drugs together with a strong publicity programme remain the primary method of controlling hydatidosis.
6. Dr Cox said that it was expected that a series of skin tests and blood tests would be carried out in the Colony towards the end of the year. He also planned exploratory studies on hydatid disease in the Islands.

Hydatids Eradication
Committee.
Stanley.

Aug. 6th, 1973.

The Chief Secretary,
Secretariat.
Stanley.

Sir,

The 8th meeting of this committee was held in the Conference Room at the Secretariat, at 5 pm on August 3rd.

The main part of the agenda was on account of a request from the annual general meeting of the Sheepowners Association Ltd. that Government would cause very much more strict inspection on properties, from time to time, to ensure that proper disposal of animal carcasses was being carried out.

I am to say therefore that the suggested frame of ~~two~~ new paragraphs quoted below have the full approval and support of the Sheepowners Association. Because of this farming support, out of a total attendance of 11, six were fully representative of the sheep farming industry.

The following amendments are recommended to the Dogs Ordinance No.1. of 1970, dated 28th January 1970.

Section. 4. Delete "free of charge" and replace with "at cost" except where in Stanley the purchase of a dog licence is required".

Section 8. After the word "from", insert "or secured".

The following new sections inserted, the ~~second~~ ^{third} of which will take the place of the present section 9.

- On file
to me
- i) Any police officer shall have the authority at any time, with or without previous notification to the owner or manager, to visit any property in order to ascertain that all sections of this Ordinance are being correctly applied and observed.
 - ii) No ~~sheep or carcasses~~ animal carcass, sheep, cattle or horse from which all viscera has not been fully removed beyond the reach of dogs shall be permitted to be left within the actual confines of any farm settlement nor within one mile of any human habitation.
 - iii) Any person who contravenes or fails to comply with any provision of this Order shall commit an offence and shall be liable to a fine of not less than \$250.

Yours faithfully,

A handwritten signature in dark ink, appearing to read "L. M. Miller".

Chairman.
Hydatids Eradication
Committee.

104
(103)

San Carlos,
East Falkland Island.

24th August 1973

The Hon. Ch Secretary,
Secretariat,
Stanley.

Dear Sir,

With reference to The Dogs Ordinance No. 1 of 1970. The ~~H~~^Vdatid Eradication Committee, Chairman the Hon. S. Miller, have recently proposed amendments to this Ordinance; I expect you will have a copy of their proposals.

With regard to Clauses (11) and (111): Clause (11) as proposed reads, "No animal carcass, sheep, cattle or horse from which all viscera has not been fully removed beyond the reach of dogs shall be permitted to be left within the actual confines of any Farm Settlement nor within 1 mile of any Human habitation",

Apart from the vagueness of the wording in the first part of this sentence, for instance what are the confines of a settlement? are they 1 mile from the furthest building, or what? Apart from that, it is the last part of the sentence which is so absurd. I refer to "--- within 1 mile of any human habitation".

Do the Dog Committee realise that a 1 mile radius area around, say an outside Shepherds house, is near enough 2011.5 Acres? Do they seriously suggest that anyone man living in an outside House can, no matter how diligently he searched and how often, at all times find all carcasses and remove the Viscera from 2011.5 Acres of ground? What utter nonsense. If he spent all his working hours at it he could not be certain. Nor could any Manager in any Farm settlement be certain that there was nothing within a mile. Not even if he employed 2 Men fulltime on it, unless of course in every case of Human Habitation no animal was ever allowed within a mile.

What happens around a Shepherds House when he is in shearing? Does his wife cover this 2011.5 Acres? Just suppose a Policeman finds a carcass in a ditch $\frac{1}{2}$ mile from a house, or I do, as a Dog Inspector, who will pay the fine, the Shepherd, me as Manager, or the Farm? Some Shepherds are good, I have 2 who keep their Camps very clean but none of them can ever find 100% of Carcasses. The same applies to the most conscientious Manager, around a Settlement. I never thought I would read such utter balderdash and to think it was proposed by Stockmen.

With regard to Clause (110): This suggests raising the Penalty to £250 for any Contravention of the Ordinance, there is nothing wrong with this provided the Ordinance is reasonable: if Clause (11) were inserted it would not be. The first Outside Shepherd that was fined £250 under Clause (11) would signal the complete Exodus of all of them. The first Manager who was

efined because some person found a Carcass $\frac{3}{4}$ of a mile from the Settlement would be the leader in a general exodus of Farm Managers.

Instead of
 this absurdly ~~IMPRACTICABLE~~ ^{inpracticable} proposal why not make it ~~IMPRAX~~ obligatory
 for ALL Dogs to be confined or chained at all times unless the Handler
 was actively exercising them or working them : this would be reasonable
 and the law could be enforced. All Farms and Dog owners should be given
 a deadline after which they would have to have provision for confining
 all Dogs.

Clause (11) as it is proposed is ⁺totally unreasonable: if it
 were inforced it would end the Sheepfarming Industry in this Country.
 The Law has been called an Ass before: if the Dogs Ordinance is
 amended by the insertion of Clause (11) as proposed, by Legislative
 Councillors, it will be an Ass again. I shall oppose the Insertion of this
 Clause, I only hope for the Comony's sake other members of Legislative
 Council will do so also.

Yours faithfully

(A.B.Monk)

HYDATIDS COMMITTEE.

Sir,

I refer to the letter to you dated 24th August from the Hon. A.B. Monk.

In his letter Mr Monk pours scorn upon the thoughts and deliberations of the Hydatid Committee in connection with their efforts to reduce, if not entirely eradicate, the menace within this Colony of hydatid disease.

The suggestions put forward by the Hydatids Committee were contained in my letter to you of August 6th 1973.

What Mr Monk does not seem to know are the circumstances which prompted my letter to you of August 6th.

The annual general meeting of the Sheepowners Association commenced on Monday July 30th and Mr Monk was present during the forenoon of that day but was not again present as he returned to San Carlos on July 31st.

During the Association's deliberations later that week there was raised the question of disposal of sheep carcasses upon sheep farms because it was reported that there was evidence of lack of proper disposal of these carcasses and in fact that many were being left about close to and actually within a settlement without even the viscera being removed and disposed of.

The Association therefore requested the Hydatids Committee and myself in particular as its chairman to hold a meeting to discuss this matter and to suggest remedies.

Accordingly such a meeting was arranged and as my letter to you reports out of a total attendance of 11, six were fully representative of the sheep farming industry.

The paragraphs to which Mr Monk raises objections and upon the authors of which he pours such undiluted scorn were conveyed back to the Sheepowners Association as a working basis to control this reported failure to dispose of infected carcasses.

The term used "within one mile of any human habitation" referred of course in general terms to the area in which a carcass might be left not disposed of and to which dogs could have access.

For Mr Monk to rant about the impossibility of disposing of any carcass over various given areas of about 2000 acres is plainly stupid; if, of course, instead of quitting the Association's meeting Mr Monk had been ~~present~~ present he would have been able to put his agile brain at the disposal of the Association and discussed the pros and cons of the Hydatid Committee's suggestions, and no doubt

some proposal might have been arrived at and forwarded to yourself that would have suited even Mr Monk.

In his penultimate paragraph, Mr Monk suggests that instead of the "absurdly impracticable" proposal, all that ~~is~~ necessary is to keep all dogs confined or chained at all times except when the handler was actually exercising them or working them.

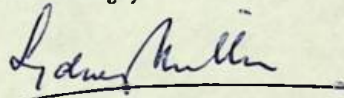

By this suggestion it would appear that it will not matter how many infected carcasses are left lying about the settlement (or within one mile of it) ; presumably then when the dogs so ~~used~~ used for work travel past these carcasses or can have access to them in the course of being worked around the settlement, such dogs will be put on their honour not to touch such carcasses.

The Hydatids Committee are determined that unless people take the trouble to dispose of every carcass that can be reasonably so disposed of, then severe penalties must be imposed, otherwise both the Committee and anyone else might as well give up any attempt to rid the Colony of hydatid disease.

In fact, Sir, if in para ii) Section 8 of the Dogs Ordinance as conveyed in my letter to you of August 6th, we insert the word 'reasonably' in the last line between the words 'nor' and 'within', *this might meet the objection.*

After 50 years of sheep farming I have yet to find a dog that can pull a carcass out of a ditch or a hole.

Yours faithfully,

Chairman,
Hydatids Committee.

Copy to A.B. Monk Esq. J.P.

Ross House

The Hon.,
The Chief Secretary.
STANLEY.

HYDATIDS COMMITTEE.

Sir,

In my letter to you dated Sept. 2nd, I have this morning discovered an incomplete sentence in my penultimate paragraph.

In this paragraph there should be a comma after the word 'within' and then the following remainder of the correct sentence - "this might meet the objection".

Yours faithfully,

A handwritten signature in dark ink, which appears to read "Lyndey Miller". The signature is written in a cursive style and is underlined with a single horizontal stroke.

DRAFT

DOGS ORDINANCE (CAP. 21)

TAPEWORM ERADICATION (DOGS) (AMENDMENT) ORDER 1973

No. of 1973

Governor

In exercise of the powers conferred by section 12A of the Dogs Ordinance, the Governor has made the following order -

1. This Order may be cited as the Tapeworm (Dogs) (Amendment) Order 1973.

2. Paragraph 4 of the Tapeworm Eradication (Dogs) Order 1970 (hereinafter referred to as the principal Order) is amended by inserting at the end thereof the following -

"in Stanley and at cost outside of Stanley".

3. Paragraph 9 of the principal Order is deleted and replaced by the following new paragraphs -

"9. Any police officer may, for the purpose of ascertaining that the provisions of this Order are complied with, at all reasonable times, enter on any land or premises for that purpose.

10. No person shall knowingly and without reasonable excuse permit the carcass of any domestic animal belonging to him or under his control from which all viscera has not been removed, to remain in any place to which dogs can gain access.

11. Any person who obstructs or impedes any police officer in the execution of his duty or who contravenes or fails to comply with the provisions of this Order shall commit an offence and shall be liable on summary conviction, to a fine not exceeding £200."

4. The principal Order is amended by renumbering paragraph 10 as paragraph 12.

Dogs Ordinance (Cap. 21)

ORDER

(Under section 12A of the Ordinance)

C. HASKARD,
Governor.

No. 1 of 1970.

In exercise of the powers conferred by section 12A of the Dogs Ordinance, the Governor has made the following Order —

1. This Order may be cited as the Tapeworm Eradication (Dogs) Order 1970.
2. The Governor may appoint any fit persons to be inspectors for the purposes of this Order.
3. An inspector shall require the owner or other person in charge of any dog in his area, to dose the dog with the tapeworm remedy "Scolaban" under the personal supervision of the inspector in such manner and at such intervals as the inspector shall direct.
4. An inspector shall supply the owner or other person in charge of any dog with such doses of "Scolaban" as the inspector shall consider essential, free of charge.
5. Every dog shall be kept under observation by the inspector for at least three minutes after dosing to ensure that the dose has been retained.
6. Every inspector shall have power to inspect any dog at any time.
7. Livers, lungs and hearts shall not be fed to any dog, nor shall dogs be allowed access to livers, lungs and hearts which are less than 28 days old.
8. Dogs must be removed from, and remain out of, the immediate area when the actual process of slaughtering cattle, sheep, horses and pigs is taking place.
9. Any person who contravenes or fails to comply with any provision of this Order, shall commit an offence and shall be liable, on summary conviction, to a fine not exceeding £25 or to imprisonment for a term not exceeding one month.
10. The Tapeworm Eradication (Dogs) Order 1965, is cancelled.

By Command,

H. L. BOUND,
Clerk of the Executive Council.

28th January 1970.

ROSS HOUSE

PORT STANLEY

FALKLAND ISLANDS

Jan. 14th, 1974.

The Hon.,
The Chief Secretary.
STANLEY.

Sir, //

You will be well aware of the considerable losses of newly sheared sheep which were suffered by many farms on a night of savage rain & gales a few days before Christmas.

Although Government as well as other people would naturally sympathise ~~isem~~ with farmers in those serious losses, it has been brought to my knowledge that on some farms insufficient care has been taken in disposing of the carcasses of those dead sheep, with a view to preventing the further spread of hydatid disease.

As chairman of Government's hydatid Committee I am a little bit concerned after receiving this information and I would ask Government to circularise all farms as early as possible, reminding managers and owners of the very recent Regulation under Tape ~~worm~~ Eradication (Dogs) (Amendment) Order 1973, dated 24th October 1973.

Under this Amendment, police officers may visit any farm without prior notice to ascertain that the provisions of the Order are being complied with.

I am well aware that during the normal stresses and ~~strain~~ strains of the shearing season it may have been difficult suitably to dispose of carcasses, nevertheless no effort must be spared if we are to overcome our current hydatid infection. //

Yours faithfully,

A handwritten signature in dark ink, appearing to read "L. J. Miller", written over a horizontal line.

Chairman,
Hydatids Committee.

Ref: AGR/10/

Chief Police Officer.

To: Ag. Chief Secretary,
Secretariat,
Stanley.

cc. Chairman, Hydatids
Committee.

Subject: Proposed amended Circular

In consultation with Mr S. Miller, Chairman of the appointed Hydatids Committee, it was agreed to circularise a minute to all farms on the correct method of disposing of animal carcasses during mass killings, and the need for improvements on a number of farms. I would propose something on the following lines:

2. In the past few months, visits have been made by the police to a number of farms in the Islands. They have carried out enquiries, and have observed that the requirements of the law relating to the spread of infectious and contagious diseases in dogs, is not being fully complied with. It shall as of now, be strictly enforced. Police will make unannounced visits at all farms throughout the Colony, and farms who are not complying with the law will be prosecuted.

3. Mass killing of animals appears to be the period when the least care is taken. As of now, disposal of all carcasses during mass killings will be carried out in the following manner:

- i) The viscera shall not be removed.
- ii) Sheep carcasses shall be stacked in piles of 50. The legs in and backs out. The top carcasses should be so placed to lock the carcasses in pyramid form.
- iii) The carcasses shall remain stacked for a minimum period of 28 days. They may then be spread over the fields.
- iv) Carcasses may also be disposed off by tipping into the open sea, providing there is no risk of them being washed ashore on beaches near to any farm or settlement.

4. It has also been observed that offal disposal drums are being left open to the air. The following methods are to be used;

i)/

- i) Burning.
- ii) Cooking.
- iii) Buried in deep pits.
- iv) Placed in covered receptacles for a minimum of 28 days.

5. It must be emphasised that only by concerted effort of everyone will we rid ourselves of this disease.

6. It is requested that a circular should be made available for the forthcoming S.O.A. Meeting. A dozen copies handed out to this Meeting would provide them with an opportunity for discussion, and perhaps other suggestions from their members would be worthwhile before circulating to all farms. It is requested that copies of all future minutes be made available to the police who have in the past been overlooked.

Reference

Date ... 18th July, 1974.....

From Officer-in-Charge,
Agricultural Department

To Ag, Chief Secretary,

2457

In September, 1970, approval was given for the payment of 50p per hour (56 herein) to Mr. P. McGill for the inspection of offal at the Stanley Butchery in connection with the Hydatid Cyst campaign.

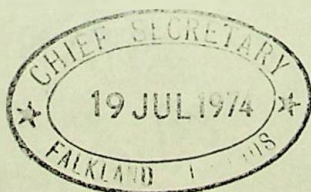

On the 1st April, 1971, this work was transferred to the Agricultural Department and is now undertaken by Messrs Anderson and McKay. Whilst doing this inspection their normal pay ceases and they are paid at the rate of 50p per hour. This inspection takes up to 3 hours weekly.

In view of the increase in cost of living since 1971 the hourly rate of pay has risen to more or less the same level as that paid for the inspection of offal.

In view of the above and the special nature and care needed for this inspection I should like to recommend that the rate of pay for the inspection of offal at the Stanley Butchery undertaken by Messrs Anderson and McKay be increased from 50p to 65p per hour with effect from the 1st July, 1974, and thereafter be increased with any future cost of living awards that are made.

Sufficient funds are available under II. AGRICULTURE, 2 Animal Diseases Control, for the increase to 65p per hour if approved.

L. Ballendy
Officer-in-Charge.

EXTRACTS FROM THE MINUTES OF A MEETING OF THE DIRECTORS OF THE FALKLAND ISLANDS SHEEP OWNERS ASSOCIATION LTD., HELD IN THE FORMER HAIR DRESSING SALON NOW CONVERTED INTO OFFICES. THE MEETING WAS HELD AT 0900 ON WEDNESDAY, 16TH OCTOBER, 1974.

125
136

Minute 18. Hydatid Disease Eradication:- Mr. Miller, Chairman of the Hydatids Committee informed the meeting of the present positions with regard to the tightening of Legislation to eradicate Hydatid disease. The Board approved all that had been done by the Committee. Mr. Cockwell's letter of the 19th September was read but it was felt that the Legislation, existing and proposed, had gone as far as it could go to accommodate the special problems peculiar to certain areas. One or two points such as the length of time offal must be cooked to make it safe and whether human consumption of livers will be accepted as a safe means of disposal, remain to be settled. In future, at Mr. Millers suggestion, all members of the S.O.A. Board will automatically be members of the Hydatids Committee.

(137)

HYDATID DISEASE Again I think the presence of a veterinary surgeon will act as a stimulus of this eradication scheme. Misconceptions have built up over the last few years which I hope I have straightened out during my stay but with a strong medical department we can really make a great headway with this. The Falklands have a few unique problems with respect to this disease (ie the large cull) which should be looked into and studied with a view of helping the scheme.

R. M. Pitaluga, Esq.,
Chairman,
Sheep Owners' Association, Ltd.,
Stanley.

Dear

Thank you for your letter of 22nd February 1975.

2 As regards the Livestock Ordinance we have inevitably run into considerable difficulties. Both I and Harold Bennett have had a shot at revising the Ordinance completely but, to be frank, there is such conflict within it and with other legislation that the only answer is to have it redrafted by an expert.

3. I did obtain some legislation from Australia which I sent to Sidney Miller. He has now returned it, and told me he thinks it not really relevant, so I have asked our legal adviser in U.K. to frame a completely new draft Ordinance. In my letter to him my main point has been that we want a law which will enable us to place the burden of proof for the reduction of keds on to the farmer and, to incorporate automatic penalties if his sheep are infested. There may be some problem about this. As you will know, it is a normal precept of British law that the burden of proof is on the prosecution.

4. I hope we shall have some useful news during the next couple of months.

--- 5. I enclose a copy of the missing minutes as requested.

6. As regards INTA I can see no objection to granting a rebate to the two representatives but will write to you again very soon about this.

Veterinary Officer/Agricultural Officer Applications

Thank you for your letter Ref: HWP/7 of 3rd February 1975. I think it would be well if I try to draw together the various aspects of recruitment for the Veterinary and Agricultural officers, and the Grassland Trials Unit.

2. You are quite right that at one time we thought we could dispense with an Agricultural Officer and that the Veterinary Officer would be able to combine veterinary and agricultural duties. From the start I believed this was misconceived, for reasons set out in Layng's letter of 12th June 1974 and mine of 16th November 1974.

3. However in the upshot the matter was discussed recently by Councillors and your view has prevailed. We shall now go ahead with: Postelmann returning here later this year (we hope); the Grasslands Trials Unit chaps arriving sometime this year, and Harrodine already at work. These will form a team lead by Mr Kerr, co-ordinating the work of all.

4. It is important that we should now give urgent attention to the basis of this co-ordination and I look forward to hearing from you on this aspect after your discussion with Mr T H Davies. He will, I am sure, be aware that the programme and terms of reference should not be left unclear.

5. Should he require it, I shall be only too happy to let him have any advice on detailed matters. He probably already has copies of our Agricultural Livestock and Veterinary legislation but if he hasn't may I suggest that he gets these from your office to be read by the team so that they don't have to waste valuable time with homework before they get started.

6. They may also be able to identify where our law is deficient. This is particularly important in regard to the Livestock Ordinance (Cap. 41) and the Dogs Ordinance

both/

both of which need urgent and extensive revision. Also a study of these laws may help the team to decide how they should allocate responsibility for administering them for, inevitably they will be drawn into executive functions once they are here (as was Hostelman last year).

Dogs Ordinance (Cap. 21)

ORDER

(under section 12A of the Ordinance)

No. 2 of 1975.

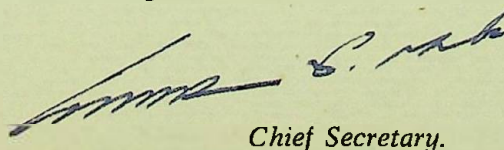

Governor.

In exercise of the powers conferred by section 12A of the Dogs Ordinance, the Governor has made the following Order—

1. This Order may be cited as the Hydatid Eradication (Dogs) Order 1975.
2. The Governor may appoint any fit persons to be inspectors for the purpose of this Order.
3. An inspector shall require the owner or other person in charge of any dog in his area to dose the dog with an approved preparation under the personal supervision of an inspector in such manner and at such intervals as shall be directed by the Governor in Council.
4. An inspector shall supply the owner or other person in charge of any dog with such doses of the approved preparation as the inspector shall consider essential, free of charge in Stanley and at cost outside Stanley.
5. Every inspector shall have power to inspect any dog at any time.
6. The owner or other person in charge of a dog shall ensure that the animal is confined or chained unless being worked or exercised.
7. No person shall feed or cause or allow to be fed livers and lungs of cattle, sheep, horses, or pigs to any dog, nor shall any person allow any dogs access to such livers and lungs.
8. No person shall allow any dog to remain in the immediate area where slaughtering of cattle, sheep, horses, or pigs is taking place.
9. No person shall knowingly and without reasonable excuse permit the carcass of any cattle, sheep, horse, or pig belonging to him or under his control from which the liver and lungs have not been removed, to remain in any place to which dogs can gain access.
10. An owner shall remove or cause to be removed the livers and lungs from all carcasses of cattle, sheep, horses, or pigs, and shall dispose of them by one of the following methods:
 - (i) through burning to ash;
 - (ii) burying to a depth of at least three feet in a covered dog-proof pit;
 - (iii) placing in a covered dog-proof receptacle for a minimum of 28 days;
 - (iv) boiling for a minimum of 2 hours.
11. Any police officer may, for the purpose of ascertaining that the provisions of this Order are being complied with, at all reasonable times enter on any land or premises.
12. Any person who obstructs or impedes any police officer or inspector in the execution of his duty or who contravenes or fails to comply with the provisions of this Order shall commit an offence and shall be liable on summary conviction to a fine not exceeding £200 for the first offence or £500 for the second or each subsequent offence.
13. The Tapeworm Eradication (Dogs) Order 1970, and the Tapeworm (Dogs) (Amendment) Order 1973 are cancelled.

By Command,

22nd May 1975.

Chief Secretary.

Dear

Hydatid Eradication Order

As promised, I attach a hastily composed draft for distribution to farm managers.

I should be most grateful if you will cast a critical eye over it, adding and amending as you see fit. We could then get it run off and circulated. Alternatively, if you thought it worth while, we could produce it at the next ExCo.

A J P Monk
Chief Secretary

HYDATID DISEASE CONTROL 1964-74

A report on ten years of effort to control hydatid disease in Tasmania.

by A. J. BRAMBLE,
Senior Hydatids Inspector

The slaughter of sheep for rations on farms has been a common practice in Tasmania since the arrival of the first white settlers.

Until fairly recently, it was the custom to feed the offal from farm-killed sheep to

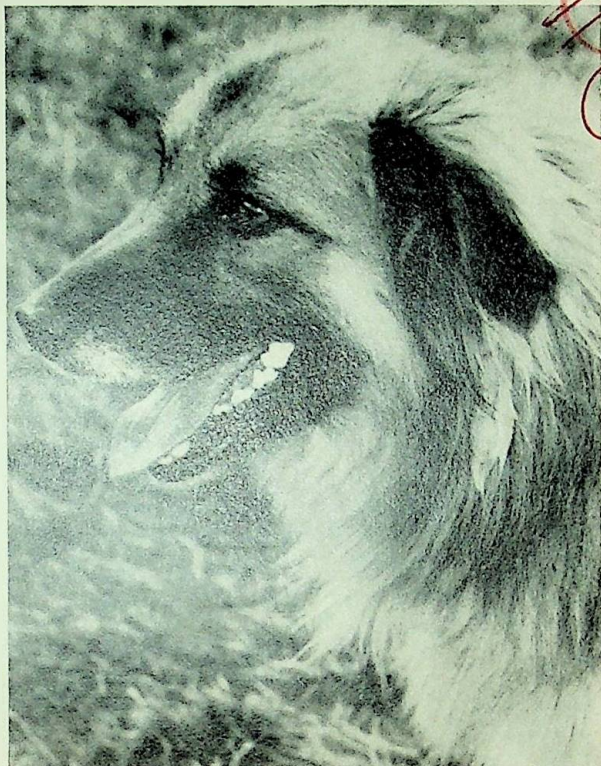

dogs. The result: a high incidence of hydatid disease.

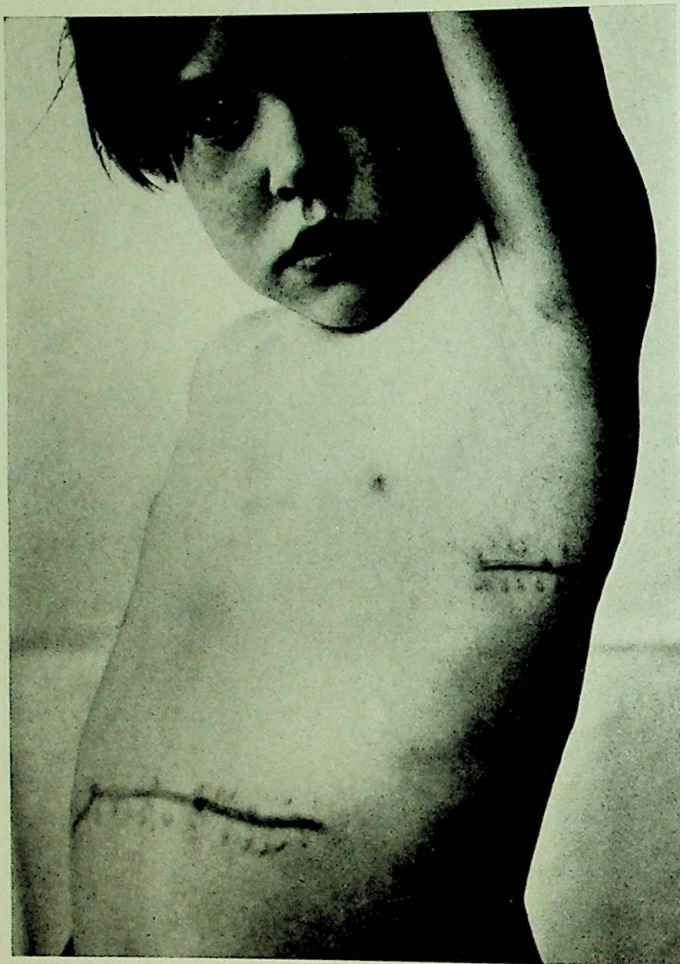

In the decade 1950-1959, the number of human cases of hydatid disease in Tasmania was the highest in the English speaking world and one of the highest in all the world (see Table 1).

TABLE 1

Hydatids in Humans per 100 000 per annum—Decade 1950-59

(1) Dalmatia	27.1 (whole of Yugoslavia 3.37)
(2) Uruguay	17.5
(3) Sardinia	14.2 (whole of Italy 1.6)
(4) Cyprus	12.9
(5) Tasmania	9.3 (whole of Australia 1.6)
(6) Greece	8.3

A victim of hydatid disease.

Reports obtained by the Chief Veterinary Officer from Tasmanian surgeons indicated that 537 people had to undergo surgery during this ten year period for the removal of hydatid cysts—an average of one case a week.

Concerned at the seriousness of the situation, the Chief Veterinary Officer proposed in 1960 that Tasmania should begin a control programme. His proposal was eventually accepted and an official Government programme to control hydatid disease was begun with a pilot scheme in 1964.

Volunteer Educators

In the meantime, the Tasmanian Hydatids Eradication Council was formed in 1962 with

the amalgamation of sub-committees from two Tasmanian farmers' organisations and the Junior Farmers' Federation. Local hydatids committees were formed in rural areas and committee members embarked on a farm-visiting programme to alert neighbours about the problem of hydatid disease. Farmers, municipal officers, housewives, doctors and veterinarians all helped in this initial programme of education.

As a result, when the official pilot scheme for hydatids control began in 1964, the Department's field officers found that many rural dog owners were aware of the problem and of the need to do something about it.

Dog being tested for hydatid worms.

Dog Testing

As was expected, the first tests of dogs for hydatid worms showed the prevalence was much higher in sheep-raising areas than in areas of mixed farming, orcharding or dairying. In fact, during the ten year period 1964-1974, as many as 65 per cent of dog owners in some sheep-raising municipalities were found to have at least one infected dog.

This meant that although many of these dog owners were already aware of the prob-

lem and were taking what they believed to be adequate precautions, the control measures, in many cases, were not effective.

Between July 1964 and July 1974, 1 734 dog owners in Tasmania had an infected dog on at least one occasion.

Table 2 shows how the prevalence of hydatid disease in dogs has been reduced since the control programme began ten years ago.

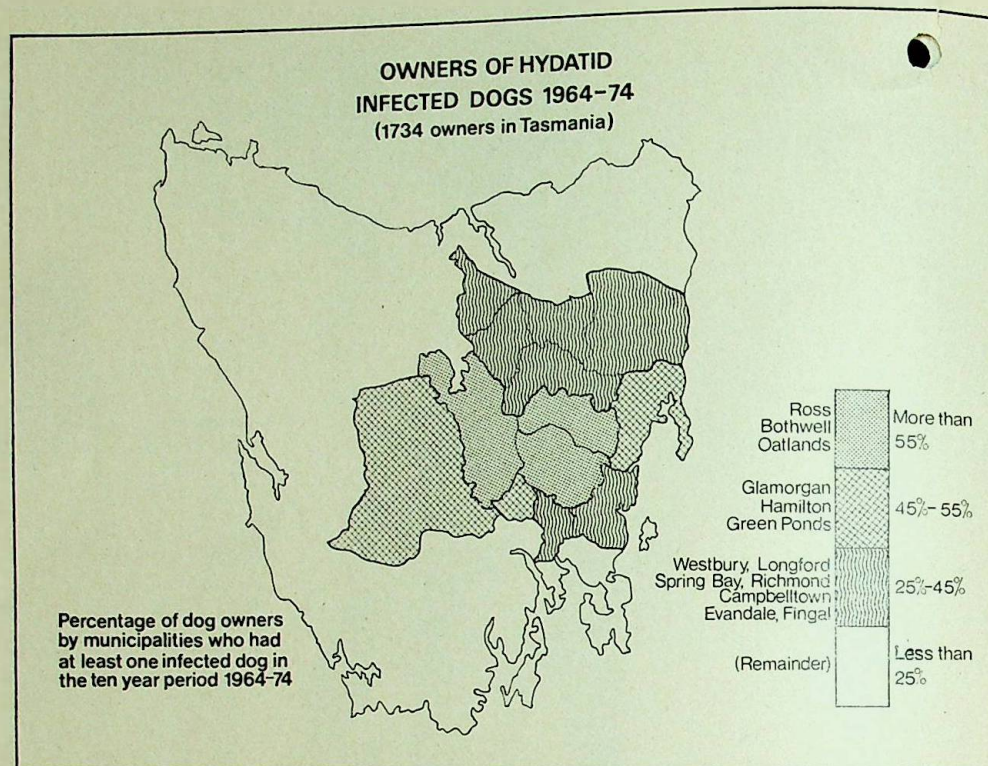

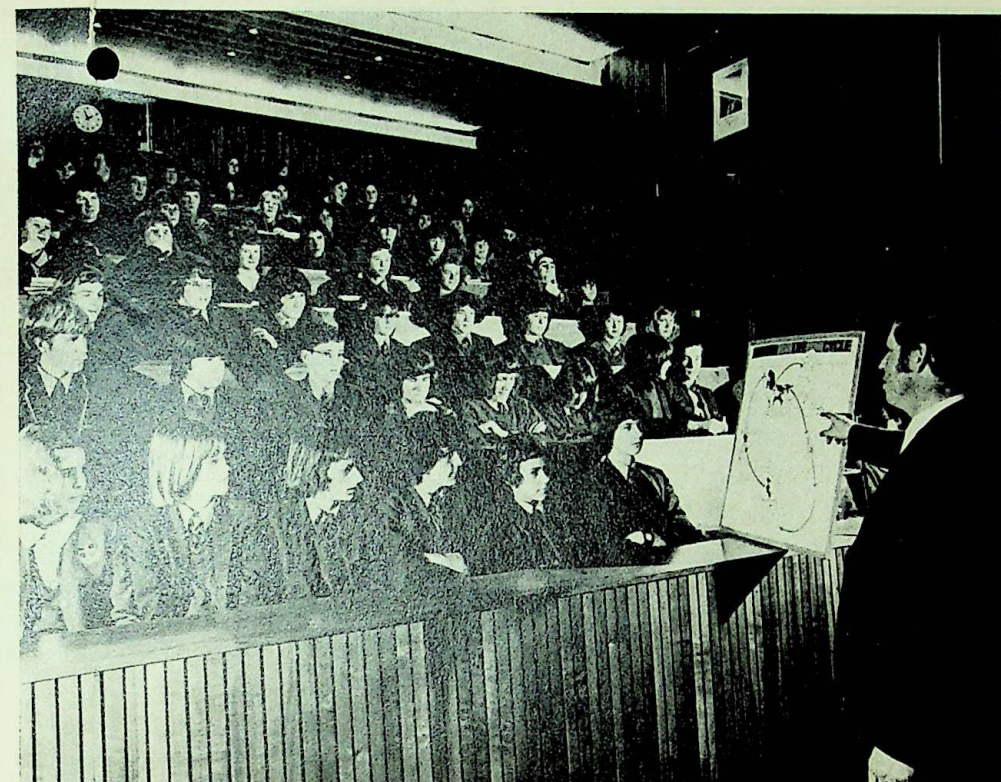

TABLE 2
Prevalence of E. Granulosus in Dogs—Tasmania 1964-74

1973-74	11 217	75	0.67	6 397	66	1.03

Regional Hydatids Inspector lecturing to school children.

Education

As the campaign progressed, it became obvious that the key word was to be 'education'. District Hydatids Inspectors became more active in farm visiting to explain the life cycle of the hydatid worm and to demonstrate how to control the disease on the farm.

At the same time, the programme of education was extended to the schools. Since 1966, most school leavers in Tasmania have been given an illustrated lecture and shown a film about hydatid disease. About 7 500 pupils receive some form of instruction about hydatids control every year.

Already the benefit of these school lessons is apparent in the influence that young people are having on their parents.

Progress

Initially the control programme relied on voluntary co-operation, but eventually the testing of dogs was made compulsory. It has been necessary, at times, to serve legal notices under the Stock Act to ensure that dogs are presented for testing.

One of the surprising features of the campaign has been that even some of the most progressive farmers have failed to adopt effective control measures until positive dogs have been detected on their own properties.

Until now dogs have been good indicators of progress in hydatids control. In particular, the detection of a positive dog indicates that it probably became infected within a period of twelve months before the test. With sheep, particularly old sheep, there

A Hydatids Inspector using an automatic counter to record cystic lesions in offal at Derwent Park abattoir.

can often be a time lag of six or seven years between the time an animal swallows hydatid eggs on the pasture and the time it is slaughtered and the offal inspected.

However, from now on, information about the prevalence of hydatids in sheep will also be used in the control programme.

The offal from large numbers of sheep is now being examined at the major abattoirs and in July this year a system was introduced

that enables infected sheep to be traced back to the properties they came from. This means that sheep owners can be advised about the prevalence of hydatid disease in their flocks.

Figures illustrating a progressive reduction in the prevalence of hydatids in sheep are given in Table 3. The reduction would be even more marked if the figures for about twenty heavily infected properties could be excluded.

TABLE 3
Prevalence of Hydatids in Full-Mouth Slaughter Sheep—Tasmania 1967-74

Year	No. Inspected	% Infection

1973	6

(From a survey conducted by the Tasmanian Hydatids Eradication Council)

New and Proposed Measures

The campaign has been strengthened by recent measures and will be made even stronger by other measures to be introduced in 1975.

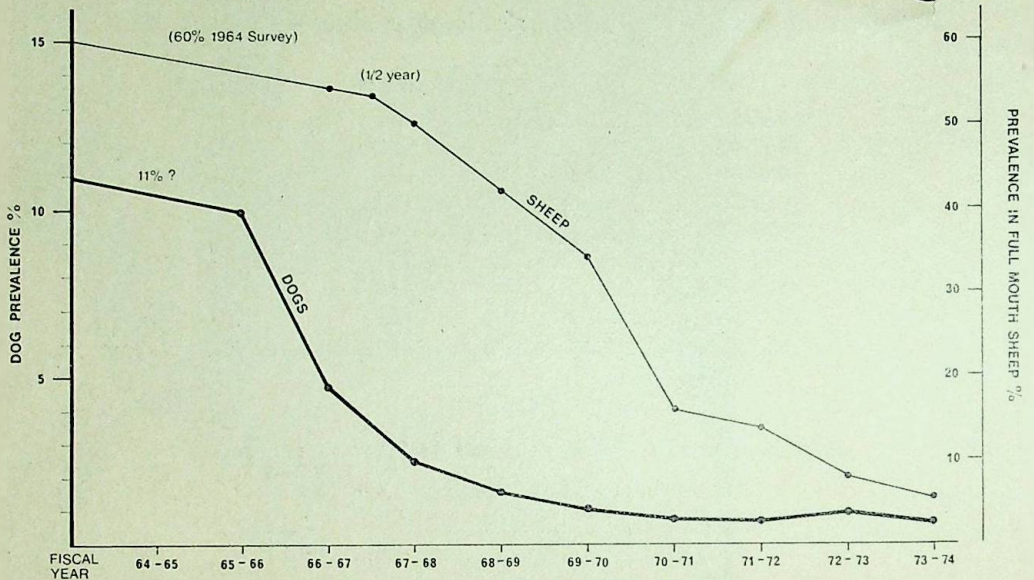

Recent measures include:—

1. An extended period of quarantine for infected dogs. The minimum period of quarantine is now six months and dogs under quarantine must be tested before release.
2. More frequent testing for certain dogs. Dog owners who repeatedly have infected dogs are to have their animals tested every six months.

In 1975:—

1. Restrictions will be imposed on the sale of sheep from properties assessed as having a hydatid infection level higher than 20 per cent. These properties will be allowed to sell sheep only for slaughter until it is clear that the rate of infection has dropped to a less dangerous level.
2. Dogs entering Tasmania from other States and overseas, with the exception of pups and greyhounds in training, will be treated for hydatid worms before arrival. All dogs will be required to have certificates to enter Tasmania.

TRENDS OF PREVALENCE OF HYDATIDS IN DOGS & SHEEP TASMANIA 1964-74

SOURCE: Animal Health Service—Department of Agriculture, Tasmania July 1974

Present Situation

The campaign has progressed well so far and much of the credit for this must go to the vast majority of rural dog owners who have heeded the advice given to them about control methods.

Only a 'hard core' of dog owners still appears to be feeding offal. Many of these people are in older age groups and are difficult to educate.

During the last full year of dog testing, fifty-nine of the sixty-six owners of infected dogs had apparently allowed their dogs to have access to offal either at farm slaughtering or in a local slaughterhouse.

The two main reasons for the accidental infection of rural dogs appears to be the

inadequate disposal of offal and careless slaughtering.

The campaign is now entering a difficult stage. Every remaining loophole in the control procedures must be found and closed. Some farmers and rural workers will have to be compelled by law to play their part in the scheme.

The reduced prevalence of hydatid disease in dogs and sheep is most encouraging and indications that the number of human cases is being reduced are heartening.

If the new control measures are successful, and the disease prevalence in dogs and sheep continues to fall, the time should come when hydatids is no longer a human health problem in Tasmania.®

Agricultural Department,
Stanley,
FALKLAND ISLANDS.

Dear Mr. Bostlemann:

Hydatid Disease Control

I have attached a reprint of an article from the latest edition of the Tasmanian Journal of Agriculture, showing the results of our programme for the 10 year period up to the end of June 1974.

Yours sincerely,

R.J. Green
(R.J. Green)

The Hon.

The Chief Secretary.
Stanley.

Dear Arthur,

Hydatid Eradication Order.

Thank you for the draft copy of the circular for all farm managers.

I have read your draft carefully two or three times and I think that it is complete as it stands and says in short paragraphs all that is necessary to be said.

With regard to the last sentence in your accompanying letter of 6th August I do not think it would be at all useful to produce it at the next Ex.Co. as your item No.1 could quite easily become the subject of further argument !

With reference to your note of 4th August under your ref: TRE/7/6, yes I have submitted a paper to His Excellency on Agriculture; this paper may or may not require modification or improvement and perhaps H.E. will again refer to the whole subject next Thursday at Ex.Co.

Yours sincerely

Rodney Miller
