CIVIL ESTABLISHMENT

OF

~~THE HALKLAND ISLANDS~~

FOR THE YEAR

1941.

Insert the several Establishments of Government, arranged according to the classification in the Estimates, including every individual employed, with all the particulars specified in the several columns of the Return relative to the nature of their Duties, their Emoluments, Length of Service, &c. It is important that the full Christian Names should in every case be given.

The table should be followed by an Alphabetical List of all the Officers, showing the Page in which their Office is described.

Under "Remarks" should be explained the nature of the duties performed by those Officers the designation of whose Office does not sufficiently explain the functions attached to them.

The names of permanent holders of Offices alone are to be inserted in the columns. If an office has been filled during the year, or any portion of it, by an acting officer, the fact may be noted in the space for "Remarks".

PORT AND HARBOURS.

STANLEY HARBOUR.

Port William, which includes Stanley Harbour, is entered between William Point on the north and Cape Pembroke on the south, both of which are marked by lights. A further smaller light bearing 89 degrees west (true) leads up Port William.

The entrance to the inner harbour in the south-west of Port William is a little more than 250 yards wide between Engineer Point on the east and Navy Point on the west. The minimum navigable depth at the entrance (L.W.C.S.T.) is 26 feet.

Two beacons on the south shore when in line bearing 185 degrees, 30 minutes (true) lead through the narrows with a depth of 34 feet. Harbour lights are established now on Navy and Engineer Points.

Berthing Accommodation. Inside the inner harbour vessels draw up to 20 feet have plenty of room to anchor in mid-channel in about $4\frac{1}{2}$ to 5 fathoms water. There are four jetties with a depth of 10 to 12 feet at which vessels up to 150 feet in length can berth.

Tides. The rise and fall of tides is very much effected by wind and weather. The difference varies from 7 feet at ordinary spring tides to $5\frac{1}{2}$ feet at ordinary neaps.

There are no dry docks. A floating dock with a lifting capacity of 750 tons and capable of taking vessels 200 feet in length and drawing 15 feet, was completed and launched in 1932. No operations are in progress to increase the depth of water within the harbour limits.

SOUTH GEORGIA.

Two floating docks are maintained at South Georgia, one at Grytviken and the other at Stromness.

The Grytviken dock has an overall measurement of 133 feet $9\frac{1}{2}$ inches and a breadth of 34 feet $8\frac{1}{2}$ inches, and has a lifting capacity of 600 tons. The dock is capable of taking vessels up to 140 feet in length and drawing 15 feet 6 inches.

The Stromness dock has an overall measurement of 150 feet 6 inches and a breadth of 34 feet 6 inches, and has a lifting capacity of 700 tons. The dock is capable of taking vessels up to 160 feet in length and drawing 15 feet.
