Stanley. 6.6.1923.

Sir.

I beg to attabh herewith the Report on, the Whaling Season 1922-1923 at South Shetlands, and Grahams Land. (3copies) Mr Hardys' Report. Two copies.

Returns of catch. Analysis of catch. Diary.Etc.

I am,

Sir.

Your obedient servant.

To The Honcurable the Colonial Secretary.

Whaling Officer.

PARAM

Stanley.

#### REPORT.

On the Whaling Season1922-1923, at South Shetlands, and

Graham Land

The following vessels operated in the waters of this Dependency during the Season:-

2. Leaving Stanley por SS Renald on the 4th November 1922 with Tr A.G. Nardy as Assistant Officer, re preceeded South through a rough sea until close to land, where, the snow was so thick in generally bad seather that an entrance was dangerous, and difficult to find. We arrived at Deception Island on the 9th to find conditions that indicated a past wild winter. Except for a few bergs, no ice whatever was seen on the passage, and beyond a few Bottle-nose, and Pike whales no other whales were seen after S7'S or in the Bransfield Straits. Thick weather prevented a distant view.

3. On arrival at Deception Tad, one third of the large harbour was free of ice, and water ran freely on the land under the snow.

4. In the early part of the season the weather was very changeable, dull, fog, calm with bad visibility, and daily snowing.

0

(2). Whaling was very poor, and became worse, Whaleswere found to

be present in great numbers to the West, and North of Smith Island. This area sam later the point of capture for the boats of S.Queen, whose gunners faced almost any weather and meas in their capture, a method that the remainder did not follow, either from want of skill, inferiority of boats, or a combination of both. Of these caught at this early time in the calm periods, most were of a lean kind, also it as in this direction that the sporm whales were killed. One gummer stating that he had seen about 40 Sporms, and thought that they were protected.

5. A Westerly type of weather set in accompanied with more or less wind from the N.MV.V. this lasted until March.The usual NE.and SV. gales were almost absont, bad visibility, duliness, and want of sunshine combined to make things unpleasant.Whales did not come into hand, and the inland waters in sufficient numbers. Those that did were reported as wild, and many that were captured were thin.
6. Early January produced a good number of the large and

fat type of Blue-shale, the type that is locked for in the first part of the season, but was far from common this year. Mid January the shaling became quite good for a short time, but the Blue-shales were mostly of the small sort. January 17th the Fin-backs appeared, most miserable specimens containing but little oil.

7. In February the Weather Was worse, also the shaling. Many whales, both Blue, and Pin were very thin, I found these thin ones frequently infested with tape worms in the smaller intestine. Specimens of these worms have been sent to the British Museum.

8. March brought much colder, but more settled weather, with intervening ME. SV. gales. Although the days rapidly grew shorter, whaling greatly improved when the long dark nights and consequently restricted bunting time is considered. This hunting time, for the first part of the season is 24 hours per day.

9. The conditions in April were remarkably good from a weather point of view to what might be expected, although these good conditions would be considered violently had elsewhere. Whaling was good for the time of year, and whales fatter. The whale boats often returnedwore resembling icebergs than steamers, from being incruster with anow, and ice from freezing spray.

10. In the latter part of the season a number of icebergs passed along from the South, these bergs appeared to attract whales. Otherwise there was no ice in Bransfield Straits the whole season. There was a good number of icebergs in Bellica Straits most, if not all of the season, but beloom whales.

11. Pike, and Killed whales were numerous, and notwithstanding the Governments' offer of payment for the capture of a specimen of each for scientific purposes.none were caught.

12. The seasons catch was declared as 243,196 barrels of **idl** from 4151 Whales, an increase of 40,000 barrels, and 576 Whales over the previous season. Table 1, and 2 attached show the catch A study of these figures are interesting, and show what is being done. There was an increase of 1.8 brls per Whale, bringing the average up to 58.1. The total Whales caught included 198 Humpbacks. There was 4 new factories employed. None had a full catch, and it was not until March was well advanced that the line between profit and loss, was crossed, for most of them. All factories arrived early, and nearly all stayed some time longer than anything tried before. This resulted in a very long season, the longest so far at South Shetlands. Most years this could not be repeated.

13. "Roald Amundsen" was permitted to finish the season at South Georgia as he had done so badly. One cause of his bad catch as that one of his gunners suffered from severe rental trouble. This factory had installed 2 press boilers to deal with blubber

(3)

residues. As I cutlined something like this as being desirable in my 1618-1919 Report, and was considerably interested in what the results would be, but I did not meet the Manager at the finish.Mr Mardy informed me that he learned this ship claimed a higher percentage of oil as a result, A study of the declared figures do not appear very impressive, although of those factories who did not operate at any time from Deception. Isd,-4 in number, the last 4 on the list, (Table 1) Reald Amundson has the best average, but the least whales.

14. There never was a rush of whales, and very rarely had a factory sufficient material for a full days work. Such seasons are perhaps the most desirable, for every effort must then be made to obtain the most from the material at hand, further as the shale is used up as seen as brought in, more cil, and of a better quality is the result, whereas if there is an accumulation of whales as a result of abundance, there must ensue a loss to all concerned , except the junner. The ideal season would be some -thing like the one under review, but faster, a perfect condition we can seldom hope for in such a susiness.

15. It is worthy of note that the first seven factories on the list (Table 1) started the season at Deception Isd, Pythia alone soon leaving for Nancen Isd, where this ship remained the season, The average per shale for these factories is very fine, shile the last four, although good, are far below the others. I would draw special attention to the fact that both "Pythia" and "Ne ko", the two lowest factories last year, are under different managers this, the results justify the change in a very marked improvement. Also "Sevilla" and "S Queen" the two lowest ships this season, were captained by the two same men who filled the same capacity last season in the "Neko" and "Pythia". Capt T. Sinclair and "NEko" 1921-2, and "Sevilla" 1922-3. The sole British Master there. Capt Andersen had "Pythia"1921-2, and "5 Queen" 1922-3, not the actual manager in either case, but on whom the duties of running the working of the ship fell, owing to the actual manager being more, or less otherwise

engaged. The two ships they have this season are a vast improve-

(5)

16. The results obtained by "Renald" and the land station do not seem to justify the energous expense of the latter. Here the entire whale is used up, jet the average per whale is less than three floating factories, although the press oil ratio is very much greater. This factory was in the same position last season. More eil could not be extracted from the "hales caught, for the entire animal is used in this case. 17. There is no question but that some factories are fortunate in securing more of the fatter whales, This is an important plant when considering figures.

18. In addition to whales actually brought in, a number are lost from various causes, besides a number wounded and escape. The unproductive less of these must be considerable, but unavoidable. I think that it would not be possible to get figures, for the reason that none will admit lesses, even where the loss is after capture.

In all 76 permits were issued for the taking of 29. Hump-back-whales, all issued during periods of slackness, and lasted for one week. This resulted in the capture of 198. 20. Mr Hardys' views on the dissatisfaction of managers over the issue of these permits I do not agree with. This dissatisfied grumble is nothing more than unadulterated snvy of the other man, and is part of their life. These grumbles of greed cannot be entertained for one moment. The permits issued, filled the purpose for which they ware intended, namely keeping the crews partly at work in slack periods. The envy of one manager towards another is an insignificant matter to a strike by the whole crea, Uneasy feelings, owing to the want of work, were evident among the crew of the shore station at Deception Isd, These appeared to cease immediately they knew Hump-backs could be taken, to quote one instance in which I feel that the permits answered

their purpose.

21. Mr Hardy informed me by code that "Neke" had taken Hump-backs without a permit, and contrary to the conditions of his licence, in consequence I caused this vessel to have no wors permits for the remainder of the season. 22. The Whaling Regulations, and the conditions imposed in the licences, are having a good effect on the production per shale, and are being carefully observed except by Mesurs Salvesens ships, - "Neko", and "Sevilla" Such fine results per shale, as obtained this season, could not be expected in a season of greater abundance. I understand that both "S Queen". **dyd** "Solstreif" anticipate considerable improvements in their reduction plant for the coming season.

23. The Manager of "S Queen" a Mr Lars Andersen acted as gunner, (not to be confused with Captain T. Andersen of the same ship, and already brought under notice.) Mr Mardy reports to be an energetic man, I too had formed this opinion previously, who desires to employ a fourth whaler next season in survey work. This should be encouraged.

24. It might be pointed out that "S Queen", owned by the Southern Whaling and Scaling Co of Liv rpool, is Registered in Norway. The whole crew also belong to that country. Thus this good factory is, for all purposes Norwegian. Mr Hardys' comment on the absence of British labour is significant. 25. Mr mardy also informed me that Messrs Salvesens' ships "Savilla", and "Meke", each have a small number of British workers on board, These are both British ships, yet the British workers in common with the gratter Norwegian element are to be paid, for the share per barrel at least, in Norwegian currency, converted into sterling at the current rate of exchange, Thus British workers on a British ship, in a British Possession will be paid in a foreign currency, liable to an unknown fluctuation. The difference in exchange will not affect the Norwegian members. I think there is little wonder that more British workers

(6).

are to t attracted, especially in the present state of depression, and no twithstanding the evidence Mr Salvesen gave before the Interdepartmental Committee.

26. The past unsatisfactory methods of Messre Salvesens! ships made it desirable that an officer should be placed on at least one of them. I therefore put Mr Hardy, the temperary Assistant Officer, on board"Sevilla". He was remote from me a matter of 90 to 120 miles at different times. It was soon evident that this Officer was in Capt Sinclairs' way, and life was made so intolerable that it was necessary for me to remove him to another vessel, and make a special journey for the purpose. Things happened which called for immediate action These matters have been specially, and separ -rately reported upon, and call for drastic action, if it is the shaling Officers of this Covernment fto have intended Sea the slightest authority over these British Vessels. The fact that with, or without the knowledge of Capt 37 Sinclair, from past experiences undoubstedly at his instigat -tion, a British Dector, -aDr Lornie threatened to punch the

officers nose, and volunteered the information that the Captain contemplated placing him in irons, is not a matter that can be tolerated , even presuming that the officer was in the wrong, in this case he was not.

22. The past defiant attitude, and actions that I have experienced from Capt Sinclair, and duly reported, are in keeping with the experiences of Mr Hardy. Now that an Officer has been placed there for enforcing the Whaling Regulations and receives such treatment, will, unless effectually stamped

cut, lead to a state where Officers have no control at all, especially with the Norwegian Companies, who do at present observe the Regulations. This Strongly emphasises the justice of my past complaints.

29. Mr Hardy draws attention to the excessive filth of these boats.My visit to "Sevilla" confirms this, and it should be

(7).

remembered that this ship was being used for the first time. It is a ship of good size as compared with "Neke". 30. It is suggested by Mr Hardy that Nekes' whele beats might be reduced to two. This view I support, for taking her capacity into consideration, two boats would bring this vessel to a more equal state with the remainder. That is the ship at present known by that name.

31. I am satisfied that one can have no confidence in the returns supplied by these ships, either in the number of thalescaught, or the quantities, and classes of oil produced I is ht suggest that if no improvement is fortheoming in this respect, that Managers are compelled to either enter into bond, or be licensed to return a correct account. It might be found beneficial to treat the gummers in the same light.

32. At least two Companies have tried, as an experiment this year, to classify their oil as it was made by a chamical means. The cil is sold by such a test, but up to now it has selden been tried, the cil being classed by the rule of thusb means, colour, and smell. Some years ago, the then Manager of the "Normanna" used such a test, and informed mo that by its means he had made £15000 above what he would have gained by the old method with the same cargo. The general extension of this method is desirable. 33. In March "Falk" reported to me by Radio that one of his boats had caught a Right whale by accident, in the dusk. This accident could occur to anyone, for it is not unknown for a whale to be shot in the actual dark. A very risky business, but still it is sometimes done. Reyond a varning, I considered no action was necessary, as this Company is most careful in the observation of the Regulations. 34. The two lighthouses were erected on Deception Isd by the Hektor Co"Fish Pdint, the outside one, was completed on

(8).

December 16th 1922. Penguin Point, - the Harbour leading light on 11th January 1923. The former was a difficult article to drag over glacier, and meuntain top. Both lights act splendidly and fill a long felt want.

35. The want of means of transit for the shaling Officer has now become a serious problem with so many Factories, sorking at times in a more,or less compact mass in Deception Isd, and at others coattered far, and wide, with probable extensions in the near future. The extreme bases at present are about 210 miles apart. It is therefore of possible to even know what most of them are doing, and supervision is impossible. It is the fugitive members who require the greatest attention for the checking of waste among other reasons. The figures on Table 1 indicate this.

56. A suitable vessel, not inferior to a first class whaler is required to get about with from point to point, as may be found necessary. A man with long experience in these waters would be necessary as the Captain, there is no reason shy the remainder should not be British.

37. During the season, whaling problems occupied a large amount of the conversation. Among the salient points raised was, whaling in the Ross Sea, and at St Helena. The former is rather alarming for the S Shetlands should it be found that the Blue-whale passes there from the Ross Sea, on its may Mast to the Weddell Sea, and beyond. It is proposed, I understand to try pelagic whaling, and they will thus be free from supervision, at least this seems the desired point.

38. St Helena has long occupied my mind as a possible base for a small whaling industry, only to be proved by actual trial. I submit it would be unfortunate to grant whaling facilities to a foreign Nation in respect to this Island. I understand the inhabitants have but a poor means of existance, and this would be a fine opportunity to start these people up as British whalers, for, after all there is nothing very difficult to learn

(9)

39. I also understand that the whale cil sold last year to the U.S.A. paid an import duty of about 10/- per barrel on landing in that country.

40. I would like to express my thanks to Mr A.C.Hardy the Assistant Whaling Officer with me for the season, for the whole hearted way in which he carried out his duties, under bad, and trying circumstances, made worse by the obstinate people he came in contact with. Especially well were his duties carried out when it is remembered that he was engaged for the season with a temporary appointment only.

Denne

Whaling Officer.

TAELE.

#### WHALING REPORT,

SCUTH SHETLANDS.

### SEASON 1922-23.

#### Sir,

I beg to submit the following report for your consideration. As you are already aware I left Deception Island on the 3rd December last to take up my duties on Messrs Salversens'steamer Sevilla at Admiralty Eay, and on arriving there, I also found the Roald Amundsen and the Neko- the latter being of the same company as Sevilla. Whales did not appear in any numbers till about the 13th of December and even then they were considered by no means plentiful; the best catches, however, were made during the first fortnight in January and it was at this time that I had occasion to speak to the Neko about the number of whales alongside. Under your instructions, permission was given in the beginning of December to catch humpbacks, but only two were caught, these being for the Neko, in fact very few of these whales were reported to me as having been seen around there this season.

Soon after arriving at Admiralty Bay I anticipated that the Sevilla and Neko, being of the same Company, would wish to work together; so when the question arose, bearing in mind my instructions to use every discretion with the whalers, I saw and raised no objections to this procedure but rather approved of it; for in the event of one factory being more fortunate than the other, carcasses could then be shared, I should not, however, have allowed any of the Neko's whalers to catch for the Sevilla in the event of the Neko being full, but I felt that there would be no objections to the Neko transferring oil to the Sevilla under the above circumstances.

In dwelling on the appearance of a whaling factory at the whaling grounds one has to make great allowances for the nature of the work and to remember, under normal conditions, that there is little time to spare during the short season for cleaning up, but it seems to me regretable that, as an English factory, the Nekc will not bear the slightest comparison with the Norwegian ships, for she is not only most unsatisfactory in the using up of the carcasses, but she is disgustingly dirty from stem to stern, and how a crew of at least 20men, manage to live for so long in so much filth, without suckness breaking out, is, to say the least, remarkable.

Unless this ship is constantly under supervision, was tefulness will take place; for with three catchers and a fair run of whales, a great amount of the carcasses will be cast adrift to make room for frasher material; therefore, if the saving of material is as seriously desired as I am led to believe, it appears to me that as this factory is absolutely unable to comply with the regulations, she should no longer be allowed to operate s as a floating factory. Even though an officer were placed on board throughout the season - it would be unsatisfactory, for under ordinary conditions it would mean that either one or two of the catchers were being continually laid up, which, after having arrived at the whaling grounds, would cause the greatest amount of dissatisfaction. This season, however, the Neko has done better with the press oil; which fact I can only account for, by having either got a change of managers, or else, owing to the scarcity of whales, more time has been given to the using up of the carcasses. Messrs Salversen's have, I am told, a steamer which would be suitable to convert into a floating factory; in which case the Neko might be suitably employed as a transport from South Georgia.

The Neko, on her way to South Georgia this season, called at St.Vincient for coal; and on leaving that port, found that she had about 50 negro stowaways onboard, so was obliged to return to get rid of them; on arriving at South Georgia she had still fourteen, and seven of these were transhipped to the Sevilla which brought them on to the Seuth Shetlands.

2.

Of these seven egroes on the Sevilla I have de a special detailed report as difficulties arose which I considred called for immediate attention; and, as a result of my actions, a great deal of bad feeling has arisen. I have also collected what I consider sufficient evidence to prove that the Neko was, this season, catching humpbacked whales without a permit - and of this also I have made a special detailed report.

It seems strange that both ships of Messrs Salvesens Company should be the cause of so much trouble; particularly so is this surprising, when one recalls Mr Salversen's remarks in the I.D.Report on relying on the loyalty and good faith of the whalers; for it has been my experience to find that his managers - men presumably of his own choice- are men, in whom, with regard to their observance of the whaling regulations I can have no confidence.

My observations lead me to suppose that the managers of these two factories consider Mr Salversen's influence sufficient to overcome all obstacles, and, as a resulk, they have developed and shown a contempt for authority, which, if not checked, now that an opportunity has arisen, will only be further believed in in the future, and thereby unnecessary trouble will be given to the whaling officers, and a bad moral effect will be produced on the rest of the whaling fleet.

Captain Poulsen showed me a certificate which he holds from the Lords'Commissioners of the Admiralty, entitling him to command a British ship - this certificate having been awarded for valuable services rendered during war time. This was, no doubt, a farsighted move on Mr Salversen's part, for the Captain was unable to state the valuable services, except that, during the war, he Captained a British transport steamer for two voyages, between South Georgia and the United Kingdom.

On Saturday, the 27th January, I arrived in the Sevilla at the Melchion Islands, Schollaert Channel, where I found the Southern Queen and Roald Amundsen-the latter having left Admiralty Bay on the 30th December. Within a few days of reaching the Melchion Islands the negro incident occured after which I left the Sevilla for the Southern Queen. The Southern Queen, to my idea, is a factory that

4

will be found to do good work in the South Shetlands, for there is a 'go'and spirit of enterprize about this ship, that I had not previously encountered in any other factory. I would also take this opportunity to state that I am not in sympathy with the wild rumors that you have heard regarding the Southern Queen catching humpbacks without a permit; in fact, I am impressed with the straightforward policy of this ship, and the desire of its manager to make and retain a good name. I learnt, from the manager Mr Larra Andersen, that an application will probably be made for a fourth boat for next season - this extra boat, I understand, is desired for survey work, so that at certain times during the season this whater can be used for finding cut any or all suitable harbours in the South Shatlands. Should this application be made and sanctioned, efforts will most likely be made to find out the possibilities of Joinville Land and thereabouts, and land to the south of Wiencke Island. It appears to me that if this firm is gilling to do such work, then encouragement should be given; for the more the whaling factories are spread out over the South Shetlands, the better are the results likely to be obtained. At the same time if Messrs Lever Prothers have been encouraged to have a whaling licence with the Object of introducing and fostering British labour, it would seem that one sensor at South Shetlands alone, has been lost by making not the slightest effort in that direction.

A STRAM

With reference to the humpback licences, it was explained, many times, under what conditions these would be, and were granted; but these arrangements did not meet with the approval of the whalers, for if one factory had a licence then it was felt that the same should be extended, at the same time, throughout the fleet. As they are so thoroughly disestisfied with these arrangements, then the humpback, perhaps, could be protected year by year, until such times as it was thought fit to allow of it being caught for either a whole or a part of any given season. In my opinion, when there were a number of these whales about, and a scarcity of others, this was a most satisfactory way of dealing with the situation, and, as intended, it certainly gave any factories that were having a run of bad luck, an opportunity to keep things on the move.

This season would seem to emphazise the need of larger catchers; for owing to the whales not coming in to the land, as formerly, the gunners have been obliged to go out to sea in search of them. In this respect the Southern Queen was fortunate in having having boats of a larger type than any of the factories with which I came in contact, and, this, coupled with the fact of her having really first-class gunners, no doubt accounted for her excellent catch of whales.

I am,

Sir,

Your obedient servant,

Awany Marchy.

Asst.Whaling Officer.

# WHALES CAUGHT PER CATCHER.

| NAME OF CATCHER. | BLUE. FIN. |  | H'BACK. SPERM. |  | OTHER. | TOTAL. |  |
|------------------|------------|--|----------------|--|--------|--------|--|
|                  |            |  |                |  |        |        |  |

On the Report on the Season 1922/23 in South Shetland. by Mr.A.G.Benn ett, Whaling Officer.

NOTE. The figures spaced out in the left hand margin refer to the paragraphs of the Report.

During this season the number of factories and whale catchers was greater than had ever been reached before:there were 11 factories and 35 catchers.

The amount of oil produced is also a record **xn**d as well as the number of Blue Whales taken.

A total of 4151 whales produced 243,195 barrels of oil. 2. Of the eleven factories the following had not operate ed in South Shetland before, but were newly fitted out:Southern Queen, Maudie, Sevilla and Roald Amundsen. Pythia, replacing Guvernøren, worked under Odd Co.'s licence.

3. The most noticeable physical conditions during the season were the prevalence of Hull foggy weather with **xw** N,NW and W winds and the great scarcity of ice. Towards the endp of the season (March) the weather improved and the catch which had been distinctly poor improved somewhat.

4. Arrangements were made by the owners of the factories for the extension of the insurance period to the end of April, and all the factories except Roald Amundsen took advantage of this. Roald Amundsen, with special permission went to South Georgia in order to finish the season there. She left on the inverse.

5. The system of issuing short period permits for the hunting of Humpbacks was pursued: in all 70 permits were issues granted and 196 Humpbacks were brought in. From Mr. Sennetts comments in his reports and from his verbal statements it is clear that the system justified its adoption.

o. Aithough The whales throughout the season, besides bein rather scarce were on the whole in rather poor condition, this is largely responsible for the average number of barrels being less than has been attained in at least one season in the past

12.

1.

2-10.

12.

An examination of the figures in Table I shows that there has been **ansistering** improvement on the figures of the season 1921/22, as it was an improvement on its predecessor.

In accordance with the practise in the two reports on the seasons preceding that under consideration I propose to define deal with the oil from the Blue and Fin Whales only.

7. The grand total of 243,196 barrels includes oil from 198 Humpbacks,4 Sperm and 1 Right Whale. Mr Bennett infoms me that the oil from the Bottlenose and the Killer was probably used in Neko's engineroom.

The Humpbacks are estimated to produce 20 barrels each each, and the Right Whale 50; three of the Sperm Whales actually produced 160 barrels while they fourth which was falloly large may be estimated at 60 brazels.

| Tne | tota | 1 deductions will therefore be - b | ls.       |    |
|-----|------|------------------------------------|-----------|----|
|     | 198  | Humpbacks at 20 barrels each3      | ,960      |    |
|     | 4    | Sperm Whales                       | 220       | 21 |
|     | 1    | Right Whale                        | <u>50</u> |    |
|     |      | Toto]4                             | . 230     |    |

6d The Blue and Fin oil will therefore be 243,196 less 4,230 barrels or 238,966 barrels which were derived from 3978 <sup>n</sup> whales (1993 Blue and 1985 Fin)-an average of o0 barrels per whale. This shows a marked improvement of the figures for the two previous seasons,-1921/22250-3 or 3-7 barrels less, and 1920/21 44.73 or 15-27 barrels less.

9. Taking now the proportions of blu-bber and press oils in the three seasons. In the 1922/23 season the ratio of <sup>1</sup>y plubber to press oil was 1.44:1 for the whole fleether. The entire reliability of the figures returned afrom Neko and Sevalla has been questione but even if they are ommitted it will be found that the ratio is 1.47:1 which is well below the com- g pulsory figure of 2.5:1 In the two preceding seasons the figures werg,'21/22-2.1 and '20/21-2.47.(the last season under the old regulations.).

10. So far as the different companies are concerned they range from anaverage per whale of 65.4 (Ørn II) to 50.19 (South-

ern

(Southern Queen) and as regards the oil ratio, from 1.66:1(Falk) to 1.16:1(Ronald). Southern Queen has over 100 whales more than any other factory with three catchers.

rough to present put will

This year again Captains Thomas Sinclair and Thorstein Andersen were managers of the factories with the lowest average production per whale, although each of them was in command of a new further, and therefore theoretically efficient factory.

16.

15

There can be little doubt that Hektor Co's.good oil ratio is in part at any rate attributable to the land station with is large press boiler plant.

11. It appears from the **p**esults of the last two seasons that the limit of the oil ratio (2.5:1) is too high and I would submit that it should be lowered at the first opportunity

I fear that it is too late to alter it for the coming seas season, but for the season 1923/24 there will be results of thref seasons from which to arrive at a reasonable figure.

12. E he 3005 Blue and Fin Whales caught in '21/22 produced 203,123 barrels of oil so that the results of the '22/23 show an increase of 376 Blue and Fin Whales but an ancrease of in oil of 30,113 barrels, the whales having increased by 10.48% and the oil by 17.76%.

> 13. Commenting on my report on the Whaling in South Shet-<sup>n</sup> land in '20/21,Sir Sidney Harmer in a letter dated the 28th. September 1921,assumes an average production for Blue and Fin Whales at 70 and 42.5 barrels espectively, on this basis the 1993 Blue and 1985 Fin Whales should have produced 233,837 bls. which is over 5,000 barrels less than the amount actually produced, although it seems that many of the whales were in poor

14. The opinion expressed in paragraph 7 of my comments on the Report on the 1921/22 season in South Shetland that the present Regulations appear to be based on sound principals is strengthened by the results of this season's operations i.e.1922/23. But it is well to remember that there was no time during 1922/23 when there was a great pressure of work sothat the fectories were able to use up there materials to

good

good advantage, with reference to freshness and economy of material.. In a year when whales were more plentiful there would be temptation to waste some of the lens productive parts.

15. With reference to Mr.Bennett's comment on the loss of whales during and after huming, it may be stated that the among the causes of this are the parting of the harpoon rope before the death of the whale and the breaking adrift of the carcasses when being towed in in heavy weather; I believe that the usual cause of this is the parting of the tissues where the securing chains are passed round just in front of the flukes.

16. Roald Amundsen) It is interesting to note that G this factory has onkern board press boilers for the purpose of further reduction of blubber residues; I have seen such an arrangement on a land station but believe that this is the first trial in a floating factory.

Southern Queen has installed two machine saws which for cutting up heads, and they are reported to work satisfactor ily. I understand that the improvements to Solstreif's plant will take the form of increasing the press boiler capacity.

17. Mr.Bennett again draws attention to the fact that hardly any British labour is employed even in the British ownfactories. Southern Queen is actually registered in Christiania and is for all purposes except receipt of profit by the shareholders in no way different from the Norwegian owned floating factories.

28-30

18. The actions of Captain Sinclair and Dr.Lornie in their intercourse with Mr.A.G.Hardy are dealt with separately in M.Ps.315,316 and 317 of 1923.

32.

Reference has been made to the subject of oil grading Confidential M.P.3 of 1923.

There is no reason to doubt that the killing of the RigWhale was an accident.

It is satisfactory to note that the beacons were erecte and brought into action in good time in spite of the difficulties which must have attended the work at Fish Point.

37.

18.

13.

24.

52.

33.

19. The roumoured whaling initial expedition to the Ross Sea is of course that of Captain C.A.Larsen and Mr.Johan Rasmussen who intend to work next season with a large floating factory and five eatchers and eventually with two factories and ten catchers. On the assumption that the hypothesis of circumpolar migration is correct with regard to either of the two principal species, it is difficult to avoid sharing in the apprehensions of the whalers that there may be deleterious effects on the whaling in the Dependencies.

20. A most important point is raised by Mr.Bennett in his paragraph no.35 namely the matter of the transport of Whaling Officers within the Dependency. This question as well as that of the necessary size of staff is one which affects efficient administration.

21. So far as suitable harbours at present in use are concerned the whaling ground extends from Admiralty Bay in King George Island to Port Lockroy in Wiencke Island. The distance is about 205 nautical miles miles between the entrances, rather more than the extreme length of Tasmania, which is about 186 miles.

| Other dis           | Phood and -                         | approx. |  |  |
|---------------------|-------------------------------------|---------|--|--|
| Deception Island to | Admiralty Bay (entrance)            | 75      |  |  |
| d <b>p.</b>         | Mikkelsen Harbour(Trinity Island)   | 70      |  |  |
| do.                 | Svend Foyn Harbour (Nansen Island)- | 120     |  |  |
| do.                 | Melchion Islands or Fort Lockroy    | 140     |  |  |

22. These distances with some South Georgia, the total length of which is about 90 miles while the distance from Prine Prince Olaf Harbour to Godthul (the most widely separated bays where factories work) is only 30 miles and that from New Fortune Bay to Allaräyce Harbour (the most widely separated sites of whaling lease, which are however not used) is 50 miles.

23. Further, there is talk of the possible discovery of him bours in the Weddell Sea side of Graham (Joinville)Land, and far south towards is the Biscoe Islands; attempts have been and e in the latter direction in the past, but without success, but it is apprent that the present distribution of the factor-ies cannot sadfly be regarded as final.

24. Up to the beginning of the '22/23 season the whole: of

35,30

this area was under the jurisdiction of one man whose movements were entirely dependent on the courtesy of the whalers. In the season recently ended there were indeed two officers and in the Dependency but there was no special means of transport, in the consequently found impossible to visit Mikkelsen or Svend Foyn Harbours, although both of them are of some importance.

25. Having regard to the distances of the various harbour from Decpetion and from one another and to the great desirabili ty of someone being at Deception firitized during the whole season I would submit that a single officer cannot hope to exercis proper supervision over the whole district and still less so when the his movements are dependent on the whalers themselves and therfore cannot but be known to the entire fleet from which in turn it follows that surpise visits are all but impossible. 26. In order to ensure greater efficiency I would suggest that the following alterations be made in the administration of South Shetland: - A. A permanent increase in the size of the surstaff

B. Provision of means of transport in the

Dependency.

27. This a guestion of providing assistants for the Whaling Officer: this was done as a temporary measure in the 1922/23 season.

Deception Island is not only one of the principal whaling harbours, but also the Port of Entry, the recognised Government Headquarters, the site of the land station (Hektor Co.), the hospital and the cemetery, in effect, the "capital" of the Dependency. It is therefore eminently desirable that an officer be present there the whole time.

27. During the earlier part of the season Admiralty Bay is much used and since as many as three factorises may be: present there in a officer might well be stationed there for the time when it is being used.

Towards the height of summer a tendency developes to move the factories to Bedgica Strikith Straits (Mikkelsen Harbour, Svend Foyn Harbour, Scollaert Channel, Melchion Islands or Port Lockroy.). The first and last of these harbours are 70 males apart, Svend Foyn Harbour is 50 miles from Mikkel.

sen

Mikkelsen Harbour and at least 20 from Schollaert Channel br Port Lockroy.

29. It is clear that an officer should be stationed in the the Straits during the later part of the season, and also that througnout the season visits of inspection should be made to all harbours where factories are porking.

This last should be the particular duty of the Whaling Officer.

permanent 30. I would submit that the \*employment of two assistants and heressary zers in order that one may always be at Deception the other in Admiralty Bay or the Straits; while the Whaling Officer would then be able to tour in and generally supervise the whole district.

31. The entire supervising staff would consist of 3 persons and may be compared with that of South Georgia where there are four in addition to a police constable and only six stations with a greatest separation of 30 miles: at present South Shetland has one officer, seven possible harbours which may possibly be used and an extreme separation of over 200 miles between them.

B. 32. The provision of adequate means of transport for the sole use of the whaling staff may next be considered.

As previously stated the Whaling Officer is dependent for his transport on the goodwill of the whalers, and whether he can move or not depends on what arrangement can be made with one: or another manager; for example when Mr.Bennett was summoned to Melchion Islands he arranged with Captain B.Hansen for the use of Bjerk and for the favour Mr.Bennett granted a week's permit for Humpback for the favour Mr.Bennett granted a week's permit time on the trip as possible:

33. Having regard to the duty of the Whaling Officer in the matter of supervision I would submit that the present system is not satisfactory, especially since nothing could be easier than to obstruct his movements on the grounds of loss of time or money, the latter affects the crews of factory and whale catcher alike by entailing loss of bonuses, while in addition to the expenditure of about £15 for each days cost of the catcher if the company may be estimated very reasonably to lose one Fin Whale each day while the catcher is engaged on • /

on other work. The value of a Fin Whale may be estimated at £175 so that the loss on each day may amount to nearly £200.

It may therefore be suggested that except in urgent circum stances a Whaling Officer could scarcely be justified in insist ing on the use of a catcher.

33. I would therefore beg very strongly to urge that a suitable vessel should be provided and would further suggest as a suitable type a whale catcher of the largest and latest class, such as the best of Southern Queen's which appear to be able to face any weather.

The catcher type has been tested in South Shetland for many many years and has proved satisfactory and in the event of repairs being necessary it would be an advantage to have a vessel of sortwith which the engineers of the factories are already familiar and for which there would be some degree of liklihood of securing spare parts if they were required.

To build such a vessel would probably cost about 350,000 kroner, which at the present rate of exchange is about £14,000.

34. With reference to the locality where such a vessel could be built, Ørnen Co.had several built in England and they are still running and afford satisfaction to the gunners who use them: Lunderstand that a particularly marked shear of the bow and stern xxx is one of their characteristics.

I am not aware of any more recent catchers having been built in the United Kingdom but there are several yards in the neighbourhood of the whaling towns in Norway which are accusts omed to this sort of work..

35. A vessel of this sort would not only immensly faciliate the administration of the Dependency but could also undertained take a considerable amount of scientific work in connection with research on whaling. In the event however of such word being undertaken in connection with that of **D**iscovery I would venture to emphasise the necessity of the vessel's administrat ive duties taking first place and of her being under the sole control of the Whaling Officer, since divided control in these such matters would almost certainly diminish the total amount of work done, whatever might be its character.

36. In addition to other work it should be found possible for the vessel to make two trips to Stanley during the season for miles mails.

> 37. The annual cost of this scheme in addition to the: present cost of local administration in South Shetland may be estimated at £5,000, distributed as follows:-

> > 2 Assistant Whaling Officers at £180 each £ per annum----- 360

Maintenance of the Assistants for 6 months at £11 per month---- 132

Cost of running vessel, say 7 months at £15 per day, £450 per month, including coal--- 3, 150

Cost of overhaul and laying up at Monte

Video---- 1,000

# <u>Unforseen</u> \_\_\_\_\_ 258 Total\_\_\_\_\_ 5,000

38. The provision of a supply of coal is the most serious practical obstacle. A catcher when steaming continuously may be estimated to consume 5 tons per day, and for six months of continuous running would require 1125 tons but in the case of the vessel under consideration a good deal of time would be spent in harbour and there would not be the same calls for full est power as when whales are being tower. I would therefore submit that 750 would be a reasonable supply for the first season:after that there would be definite statistics on which to base estimates. Coal would cost say 30/\_ pertonin England delivered in bulk but me exclusive of trimming.

39. Transport for the coal might be found by arrangement with the Hektor-Hvalen Cos. I understand that Maudie can carry about 2000 more than she requires.

Ronald has always to land a considerable amount of coal for the land station and in order to save handling it might be possible to bunker the Government vessel direct and for Maudie to land the equivalent of that supplied for the land station.

It would probably be advantageous to arrange for a coal dump of perhaps 50 tons to be made in the Straits, at Svend Foyn Harbour. Surplus coal at the end of the season should prenution ferably be sold to one of the factories wather than leave it to endure the deteriorating effects of winter.

It

It is unfortunately not possible to estimate what charges might be suggested by Hektor Company either for freight or handling the coal.

40. Provisioning could probably be done through one of the whaling companies, which would I submit be found a satisfactory arrangement.

41. The grew of a cationer normally consists of 10 persons-master, mate, first and second engineers, 3 deckhands, 2 fire men and one steward and cook.

The master need not be a gunner, but he should have had at least two seasons' experience of mavigating a catcher in South Shetland including work in the Belgica Straits in both of them

The inadequacy of the charts, are, I submit, sufficient  $e\pi$ planation of these desiderata. It inevitably follows that the master would have to be a Norwegian.

42. The xreminater With regard to the remainder of the crew, it might be gonsidered desirable to train British seamen for the work although in the first place the majority of the crew would have to be Norwegians since they **xre** only are accust omed to the use of the catcher type of vessel.

42. The objection to attempting to train a British crew lies in the matter of additigal expense. It should be posible to engage a crew for each season in Norway and for them to terminate their agreements on arrival at their home port, so that they would draw pay for perhaps seven or eight montabut if British seamen were in course of training it appears almost certain that it would be necessary to pay them for the whole year in order to be sure of their services for the subsequent season, otherwise **iiiiis** the attempt to train them might prove completely abortive: and it is difficult to see what work could be done by these men while their ship was hid up.

In any case for those regularly engaged in work in South Shetland a return to a climate more genial than that of the Falklands may be regarded as necessary in order to maintain their health and spirits.

The government vessel should be fitted with wireless, it seems possible that an operator could be found locally.

44

44. Mr.Lars Andersen, catch manager of Southern Queen stat ed that he wished to bring down next season a fouth catcher in order to carry on survey work especially with a view to the discovery of new harbours suitable for use by a factory.

11

The suggestion may be made that this vessel might be used by the Whaling Officer for his official journeys, but if it can be avoided by the building or hiring of a special **xxix** catcher I would deprecate such an arrangement since even then the Offic er would not be assured of independence of movement.

#### ANY MINARXEXPANNIA XXX

45. There is clearly not time the have a cathcher built for next season but there is little doubt that one could be chartered.

If this be done it wothid be advisable to secure as large a vessel as possible and not one of the small type such as Scapa(Chr.Salvesen & Co.), and whether built or chartered should have a deck cabin for the use of the Whaling Officer.

40. Arrangements would have to be made to transport the crew annually between Europe and Monte Video, where I have assumed that the vessel would to laid up annually, since there are there factilities for the overhaul and repair of this type of vessel, and an annual overhaul would be necessary after a sea son in the waters of South Shetland and in preparation for the next.

19. Hamilton. Gov. Naturalist. 28. June 1/23.

There is little in Mr.Harny's Report which calls for comment here; a considerable part of it deals with the shortcomp ings of messrs.Salvesens' managers and factories and they are being dealt with separately.

2. It is however to be noted that Neko is reported as being exceptionally dirty even for a floating factory, and this was the case when she was cammanded by Captain Sinclair.

This person is now master of Sevilla and I am informed that this ship also is very dirty.

3. Mr.Hardy considers that the Humpback permits achieved their object, namely the the continuation of employment in the factories when there would otherwise be no work to be done.

io. 86.

GOVERNMENT HOUSE, STANLEY, 4th July, 1923.

My Lord Duke,

I have the honour to transmit herewith the report of Mr. A. G. Bennott, Whaling Officer, on the 1922-1925 South Shetlands Whaling Season, together with the consents of the Government Naturalist thereon.

2. It is satisfactory that the fears of failure entertained in the early part of the season proved to be unfounded. In order to make up their catch, however, the factorios continued operations to a much later date than usual. In Mr. Lonnett's diary he made a note on the 15th of April that the whole floot might be frozen in at any time, and added that he considered that if any factories were staying on they wore taking great liberties with the lives of their crews, "for they have but little coal and less food. at the outside ons month's supply." He himself left in the "goneld" on the 26th of April. Although I do not consider that the risks taken were so great as Fr. Bennett feared at the time it is, I submit, a matter for consideration, whether the season should not be reduced by a fortnight and all whaling in the South Shetlands stopped on the 14th of April. This is I am informed the date to which the vessels are

covered/

HIS GRACE THE DUKE OF DEVOLSHIRE,

P.C., K.H., G.C.M.G., G.C.V.O.,

SECRETARY OF STATE FOR THE COLONIES.

covered by insurance. Reinsurance was effected this year.

3. The permission to kill humphacks by a system of temperary permits appears to have been justified. It may, I trust, be continued in the 1925-24 season.

4. The average production of oil par whale is considerably higher than might have been expected in view of the poor condition of the whales. It is worthy of remark that the seven vessels operating, from Deception Island, Where P. Lennett was stationed, had the highest average production. The propertion of blue whales to the total eatch of blue and fin whales was 48.5 per cent in these ships as against 62.13 per cent among the your working elsewhere. Three of the latter factories were newly fitted out. The s.s. "Maudie" stationed at Deception Island, being the only other newly equipped factory, had the third highest proportional average in the fleet. It is not uproasonable to assume that the presence of an experienced whaling officer at Deception had a good offect. Tho average production of the s.s. "Southorn Cucon" does not reflect favourably on the management, and the owners will be addressed on the subject.

5. The Assistant Thaling Officer reports that the manAgement of the "Southern Queen" intend to apply for permission to use a fourth catcher in the following season, partly for survey work. Such an application should not, I submit, receive approval unless effect can be given to the suggestion contained in paragraph 69 of the Report of the Inter Departmental Committee on Research,

and/

and the vessel menned by a British crew with a Norwegian instructor.

6. It is a matter for regret that there should have been a considerable amount of friction between the master and doctor of the s.s. "Sevilla" and the Assistant Thaling Officer. I am addressing Your Grace by separate despatch on the subject. It is sufficient to point out here that the whaling officers are, under present conditions, dependent on the goodwill and teleration of the officers of the vessels in which they are staticned.

7. It is, I think, necessary in the interests of the administration of the Dependencies generally that the Government should own a vessel for inspection and transport services, instead of being compalled to rely entirely upon the goodwill of masters of vessels. I am at present of the opinion that the considerable cost entailed would not be justified for the South Shetlands alone, and that any vessel obtained should be available for visits to South Georgia and if necessary to the South Origins.

8. Mr. Hemilton considers that the largest and latest type of whale catcher should be obtained. I understand that the registered tennage of these vessels is 74, or about one half as large again as the Colonial vessel "Afterglow". They are built for a speed which would be unnecessary for patrol and transport duties. If the vessel to be obtained is for general service she should in the opinion of Tr. Hemilton be considerably larger than if required for the South Shetlands only.

3.

I/

I do not think that the original cost of a suitable vessel of 200 tons gross, should exceed £14,000 or that the running and maintenance charges should be higher than he estimates for the catcher type. The question appears however to be one which can best be dealt with by the Governor on his present visit to England.

> I have the honour to be, My Lord Duke, Nour Grace's most obedient, humblo servant,

> > H. Henniker-Heaton.
