(Foxes)

C.S.

1926.

No. 278/26

Mr. J. Hamilton.

SUBJECT.

1926.

6th April.

PROPOSED IMPORTATION OF THE PAMPA FOX INTO THE FALKLAND ISLANDS.

Previous Paper.

834/22

Applications from Mr J. Hamilton, Coeddoe Is., and R.C. Pole Evans, Port Howard.

MINUTES.

1. Letter from Mr. J. Hamilton of 6. April. 1926.

Chief Inspector of Stock.

Referred to you for your observations.

C.R. [Signature] 29 May 1926

C. Ich. Sect.

I understand that the pampa fox is quite a small animal which lives mostly on small birds, lizards eggs & carapace

I have spoken to Mr Slaughter (Camp manager for F.I.C.) who has spent 12 years on the coast & he is very much in favour of the importation of this small fox. Both Mr Slaughter & Mr Hamilton have told me that on the coast the pampa fox does little or no damage to sheep

Subsequent Paper.

but they destroy large numbers of
young geese & geese eggs. Farmers
in Patagonia have I understand
asked the Govt there to protect
the pampa fox.

On the other hand I
have it on good authority that
small birds & penguin rookeries
also suffer considerably.

The pampa fox is I believe
a slow breeder & would therefore
be easily exterminated if necessary.

From the farming point
of view only I am of the opinion
that if Mr Hamilton would
guarantee to hold himself
responsible for all the foxes on
his islands or any that might
be brought off the islands I can
see no reason why the importation
to Stants & Lee Islands should be
disallowed, also providing of course
that the Government could at any
time if it thought necessary call
upon Mr Hamilton to destroy all the
foxes for which he was responsible.

I should like to suggest that
the Farmers Assⁿ be called upon for
its views before further action is taken
in the matter.

The Carter

P. S. S.

1/6/26

C.E.
Submitted

2. I have spoken to Mr Carter on this matter and attach N.P. 834/22 relating to the importation of fowls by Mr Slaughter of Darwin in 1922, which Mr Carter has seen.

3. Proclamation No 2 of 1921 which prohibited the importation of all animals except horses and dogs was repealed by Proclamation No 1 of 1922 which was in turn repealed by Proclamation No 5 of 1923. Under the Live Stock (Constitution) Regs. 1923 any animal may be imported provided due notification of the importation is given.

4. The importation of fowls to a single island would not seem to be open to grave objection but there is the question of the possibility of their ultimate introduction into the main islands to be considered. It might be found difficult to 'turn down' any similar applications of permission were granted in this case. The Shepherd's views of the Sheep Breeders Association would be of assistance in ascertaining

No - only those animals enumerated in the Schedule to the Regulations of V.

J.

the opinions of the farmers generally on the question. The only disease communicable by foxes is, I understand, rabies.

5. Foxes might prove very useful in destroying the eggs of quail and birds of prey. On the other hand as Mr Carter points out they would be liable to do considerable damage to the protected birds. Subject to your Excellency's approval I propose to refer this aspect of the question to the Acting Government Naturalist before further action is taken in the matter.

W.H.L.

D/Secy

4 June 1926

O/c Sect.: Yes, I should be glad to have the views of the Actg. Government Naturalist

2. As to getting the opinions of the members of the Sheep Breeders' Assn., useful as these would be, it would probably be months and months before we heard anything?

D.

4.11.26

Acting Government Naturalist.

Referred accordingly.

W.H.L.

D/Secy

4 June 1926

In C Sect.

Mr J. S. Hamilton (Discovery) & I have talked this matter over long ago.

One never knows what to expect from the introduction of any fresh thing into a country new to the species, The laws of natural selection operate severely.

Speaking generally an introduced species either dies out at once (not likely in this case) or multiplies most rapidly. always providing there is an abundance of food.

Two being dogs, should have two litters per year - up to 8 at a birth. The species may differ, due to long generations under different conditions than normal.

Unless hand fed on carrion they will punish the birds.

The proposed islands are remote ones & before expressing an opinion on the probable results to bird life, I should like to see these islands about the end of December & spend some time on them. in order to determine the bird tenants. Being remote they may & possibly do contain the breeding places for some of the oceanic scarcely known birds. These would be missed by the casual observer, being generally nocturnal

in their habits.

Anything that will increase the income of the Colony is to be welcomed, Fur is a valuable item in many cold climates

They are not likely to prey upon the nests of "Hawks" the reverse is to be expected. I also doubt their chances with a goose, for a domestic goose, certainly a larger bird, always wins in a fight with a good sized pig.

The two islands are but, ^{some} of many others in similar positions, & it might not be good for birds to occupy all with foxes. The question is are the birds even though protected, of more value to man than the animals proposed.

The Foxes might with great advantage be introduced to places like rat ridden New Island, there are millions there, still ground breeding birds (Petrels) are holding their own against these pests & I can scarcely think that the fox could do more damage.

W. H. P.
O. J. C. S.
7 June 1926.

O. J. C. S. The question of introducing foxes into South Georgia was considered by the Inter-Departmental Committee (vide p. 46 of Report). It is true that the animal contemplated in that connection was the Arctic Fox - blue variety.

but as I have been unable to trace any detailed description of the "Painpa" fox, it is not possible to say whether their habits etc. differ very much.

2. At any rate the Committee in its Report states :-

"The question of fox farms is a highly problematical one. x x x x x Of course, foxes and penguins could not live side by side. The penguins would need to be sacrificed in part or the whole of the island. The economic objections are two: firstly, the spread of foxes might injure any fur seal workings established on the coast; secondly, the disturbance of the balance of life might, in ways not obvious, react on the whale fisheries. The problem, therefore, would need to be most carefully ~~thought~~ weighed, and a decision could not be reached without further study on the spot of the life habits of the animals of South Georgia and surrounding seas x x x"

3. Although the two economic objections instanced in the case of South Georgia do not apply to the case under review, considerations of a like nature in connection with the animal life existing on St. Paul, St. George, and surrounding neighbouring islands cannot be ignored.

4. Incidentally, the fox has been known in the Falkland before, and on page 215 et seq. of Boyson's "The Falkland Islands" will be found an interesting account of the now extinct "Canis antarcticus". According to Miss Boyson the Falkland Island fox was figured in Darwin's "Voyage of H.M.S. Beagle" which W. Hamilton refers to for the

Zoological name of the pampa fox. I have not been able to get hold of a copy of the book yet.

5. The Falkland fox was a biggish type, and a terror to Sheep, but Mr. Hamilton refers to the pampa fox as a small animal which does comparatively little harm to Sheep. Mr. Slaughter tells me that it is no larger than a small fox terrier, and that to the best of his knowledge it will not attack Sheep.

6. Since writing above I have found a copy of Darwin's book, but the sole reference to the Patagonian fox I can trace is very brief and does not give the scientific name. He refers to it as a small and delicately-shaped fox which is abundant and probably deserves its entire support from a peculiar species of mice.

7. You are making enquiries as to whether Mr. John Hamilton is likely to be in Stanley in the near future. If he is I will take the opportunity of discussing the matter further with him then.

D.
10.VI.26

V.C.

A telegram has been received from Mr. Robertson, Post Stephens, stating that Mr. Hamilton will not be in Stanley for some time.

C.H. 13

Difesut.

15 June 1926.

Of Sec.

From the information at our disposal so far it appears extremely unlikely that there would be any danger, in allowing an Experimental importation and the Experiment might prove of great future value.

2. To be absolutely on the safe side however, it might be as well to accept the suggestion of the Chief Inspector of Stock and Cattle the Sheep Breeders Assn.

3. Will you please write to the Secretary and state ^{that an} application has been received for permission to introduce the Pampa Patagonian Fox to stacks and Islands of the Heaver Farm and ^{say} ~~state~~ that I would be glad to have any observations the Association may care to offer as to the advisability or other view of allowing such an importation. It should be explained that as far as is known this small type of fox will not attack Sheep, whilst as a means of keeping down geese it has proved of the greatest use in Patagonia.

4. In the meantime Mr. Hamilton's letter should be acknowledged. He should be informed that I am in full sympathy with the object of his application, but that ~~the~~ the question of the introduction of a new species of animal requires careful consideration from all points of view, and that before any decision can be arrived at, it has been considered advisable

to make ~~comprehensive~~ ^{some} inquiries. Had
that a further communication will be sent
to him in due course.

C. J. S. Mr. Hamilton is expected at Stanley
by the s.s. "Falkland" on her return from
her present trip to the West Falkland.
D. J. C. S.
20th Sept.

D
9 Sept. 1926

Letter from Mr. R. L. Pollock Post Howard. 5.
22nd Sept 1926.

Note. Mr. J. Hamilton arrived in Stanley by
's.s. Falkland' on 16th Nov. D. J. C. S.

H. C. S. ~~Notwithstanding the fact that the~~
~~introduction of these animals is prohibited by the~~
~~provisions of the regulations of 1923.~~

As far as I can ascertain the only
authority under which the introduction of these
animals could be prohibited is that contained
in Sect. 9 (1) of the Live Stock Regulations (Consolidation)
1923 which give the Inspector of Stock power
to prohibit the landing of any animal which

Inside Minute Paper.

in his opinion would be a source of danger to other animals in the Colony.

2. In their letter of 4th Sept. (4) the Sheep Breeders Association see no objection to the introduction of the Patagonian Pampa Fox provided that an Ordinance is passed to prevent any being let loose on the main island under the penalty of a heavy fine. I hardly see any necessity to introduce new legislation to meet this case, particularly in the present purely Experimental stage of the venture. The animals are to be kept on ^{small} isolated islands, and the danger of their getting on to the main island is extremely remote. Both Mr. Hamilton and Mr. Slaughter have informed me that if necessity should arise these animals are easily exterminated.

3. Permission may be granted to Mr. Hamilton and to Mr. Pole Evans to introduce not more than 3 pairs of Patagonian Pampa Fox on to the islands mentioned on the district understanding that they will take every precaution to prevent the animals from reaching the main island. At the same time they should be requested to prepare a report say in 12 months time as to the result of the Experiment.

Chief Inspector of Stocks.

Do you see any objection
to the carrying out the proposed
experiment in fox farming at South
Georgia?

W. J. H.
10.4.28 for C.S.

The Hon
Col Sec

I inspected the two
foxes when on board the "Celia" at
Beaver Island & was informed
by W. J. Hamilton that he wished
to present them to the Government
for experimental purposes at South
Georgia.

I discussed the
matter with W. J. Hamilton
who was of the opinion that

if pampa foxes could be
successfully established
at South Georgia they would
produce a very valuable
fur. I quite agree with Mr
Hamilton & Fullinwider &
I believe that at some future
time experiments could be
carried out by crossing the
pampa fox with the valuable
black fox such as have
recently been introduced into
Lanai.

3 From my recent observations
upon the Slatts Island I do
not think the pampa fox
there are molesting the penguin
rookeries. I observed many
fox tracks all about the
rookeries but could obtain
no evidence of the foxes having
interfered with the penguins
in any way.

I understand from Mr
Hamilton that the pampa fox lives
mostly on old carcases of mutton
& shell fish & small animals
(such as rats.) On Slatts Island
they appear to have been living
on old carcases of mutton which
were placed there for them & I believe
they would do equally well on
whale meat. I also observed on
Slatts the remains of several
geese & 2 broken luggards but
I do not know if the foxes cause
the death of these birds or not
although there were numbers
of fox tracks near the carcases.

Hon. Secy.

Mr Hamilton & myself went to Staats Island on Monday
25th March and released the 4 foxes mentioned in Red. 26.
they were allowed a run in an old shanty and we left
food & water for them. Mr Hamilton intended to give one
pair to the Government, but as two of the foxes had
been slightly affected in the legs during their captivity he
decided not to do so. We had a good search around
and saw numerous tracks but of course did not
actually see any of the foxes that had been released
previously. On Wednesday 27th March we returned to
Staats Island; one of the ^{two} foxes mentioned above was
much improved, we took with us carcasses of mutton
& plenty geese. During both visits we saw only
1 pair of geese, but I do not think that the foxes are
molesting the Penguins. "I think the foxes are breeding
because on our second visit we discovered small
impressions, which we concluded were made by cubs.

Sam I have you.

This experiment of Mr. Hamilton's should be interesting.

As the Foxes will be introduced to a comparatively small island, and should they become a danger to the sheep their numbers could be controlled.

I do not expect trouble will arise, Mr. Hamilton has had experience of these animals in South America, and would not import any animal that would decrease dipping percentages.

foxes being introduced on Weddell Island.
I presume that the foxes will be
taken from sea or Statts Island.

John

3. 4. 35.

Hon. Col. Secy:

Mr John Hamilton has had a life
experience with the smaller fox in Patagonia,
in a wild state, and on his own farms. It
seems clear that if this animal was
of the slightest danger to stock he would
not desire to place them on Weddell Is.

(Red 35+36) does not state if the
foxes are to be liberated, & thus find their
own food, or whether they are to be
confined & fed; if so, on what food? If the
former method is to be adopted there is
reason to believe that bird life will be
quickly reduced, for there is little or nothing
else for foxes to secure

The "Monte" fox, mentioned in, (Red 35)
is, I understand, a native of Tierra del Fuego,
From the single skin seen, it appears to be as
large as a Collie dog, while the small pampa fox
is scarcely as large as a small cat in the body.

Submitted. I see no objection to permission being granted. In 436/30 attached sheet 8, Mr. Miller was given permission to land on Sedge Is. Guanaco and Skunks - about 15 of the former were put on the Island also a number of the latter. The Island has not since been visited so no information is available as to how the animals are progressing.

Weddell Island

6th April 1926.

Sir,

I am writing to ask if His Excellency the Governor would be disposed to grant me permission to introduce the Patagonian Pampa fox to Staats and Te Islands in the Beaver group situated at a considerable distance from the mainland.

My idea is to establish a fox farm in conjunction with the usual number of sheep and cattle which these two Islands carry at present.

The skin of the pampa fox is worth over £1:- selling locally; but in London their value must be very much more. These small foxes do comparatively little harm to sheep, and if necessary are easily exterminated, and more especially on Islands. I am unable to give their technical name, but I think this can be found in "Darwins Voyage of the Beagle".

The range of the pampa fox extends from the Straits of Magellan to the warm climate of the Province of Buenos Aires, but the fur is only valuable in the colder regions of the South in the same latitude as these Islands.

I have the honour to be,

Your obedient servant,

John Hamilton

Hon.

The Colonial Secretary

Stanley.

16th June, 26.

Sir,

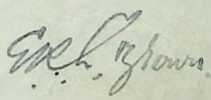

I am directed by the Acting Governor to inform you that an application has been received for permission to introduce the Patagonian Pampa fox to Staats and Te Islands of the Beaver Group, and to say that His Excellency would be glad to have any observations the Falkland Islands Sheep Breeders Association cares to offer as to the advisability or otherwise of allowing such an importation.

2. I am to explain that, as far as is known, this small type of fox will not attack sheep, whilst as a means of keeping down geese, it has proved of the greatest use in Patagonia.

I am,

Sir,

Your obedient servant,

for Colonial Secretary.

G. I. Turner, Esq.,

Secretary of

The Falkland Islands Sheep Breeders Association,

S T A N L E Y.

16th June,

26.

Sir,

I am directed by the Acting Governor to acknowledge the receipt of your letter of the 6th of April requesting permission to introduce the Patagonian Pampa fox to Staats and Te Islands of the Beaver Group.

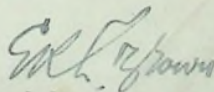

2. I am to inform you that His Excellency is in full sympathy with the object of your application but that the question of the introduction of a new species of animal requires careful consideration from all points of view, and that before any decision can be arrived at, it has been considered advisable to make comprehensive enquiries.

3. I am to add that a further communication will be sent to you in due course.

I am,

Sir,

Your obedient servant,

for Colonial Secretary.

J. Hamilton, Esq.,

Port Howard
West Falklands

Sept 22nd 1926.

Sir

I have the honour to ask for permission to import ^{some} ~~the~~ Patagonian Pampa Foxes on to River Island (off River Harbour)

I may state we have for years been endeavouring to improve this Island, but have been greatly handicapped by the Guse, we have spent hundreds of pounds, & planted thousands of Tussac plants, the past winter alone we put in 111,400 plants, we have also tried English grass suds, which the Guse eat as soon as they appear, at present we are sowing a lot of New Zealand grass suds, which we have lately imported, but unless we can find something to keep the Guse down on this Island our experiments are only a waste of money.

I beg to mention this Island carried on an average 500 Sheep until 1917, since when we have had no sheep on it, for 3 years we had nothing on it, & then put a few horses on it, & fenced the Tussac out.

Trusting you will grant the permission asked for.

I have the honour to be, Sir,

Your obedient servant

R. B. Pole Evans

Manager for J. L. Waldron Esq.

The Honourable
Colonial Secretary
Stanley

EXTRACT FROM LETTER FROM MR. J. HAMILTON DATED 22nd. (10)
MARCH, 1928. FILED AS REDS 748 IN H.P. 112/29.

Weddell Island.

22nd March. 1928.

The Honourable,
The Colonial Secretary,
Port Stanley.

Sir,

I have the honour to inform you that I landed seven foxes in Staats Island one pair of which I am holding in captivity in order to present them to the Government as a trial in fur-bearing in South Georgia. That is to say if His Excellency the Governor finds it convenient to accept them. At present the foxes are being fed in a shed in Staat's Island. Awaiting your reply which if you kindly forward to Mr. Robertson of Port Stephens he will send the communication to Weddell Island.

MAGISTRATE,
SOUTH GEORGIA.

With reference to the suggestion made by you recently that the Government should consider the possibilities of fox-farming at South Georgia. His Excellency would be glad to learn if there are islands or localities on mainland in which animals could be segregated pending investigation of their effect on other forms of wild life. What is it proposed that the foxes should feed on and may it be assumed that they could be introduced without detriment to penguins. The latter consideration is most important.

— With reference to your telegram of the 4th inst., and my reply of the following day regarding fox farming.

2. I have been approached by several of the whaling managers and asked to obtain the Government's views on the subject of the establishment of a fur fox industry in this Island.

3. Subject to expert opinion, in Norway, where the silver fox is now extensively farmed it was proposed to bring out a few pairs next season and breed them under control in this Dependency.

4. The proposed company had wished to rent Mutton Island in Stromness Bay and some acres of ground adjacent thereto, and to fence this ground off from the remainder of the Island.

5. The only information required was as to whether the Government would have objected to renting the ground for this purpose, if required, at a nominal rental, as if the industry proved successful an adequate revenue would be derived from a duty on the skins.

6. As, unfortunately, many of the managers have sailed before you have been able to reply to my telegram I fear the matter will now have to be held in abeyance.

Frederick B. Allison
Magistrate.

Extract from letter from Mr. J. Hamilton, of
28th April, 1923. (Original filed in M.P. 102/27.)

The receipt of your letter No. 112/23 of the 7th of April in which I am informed of His Excellency the Governor's acceptance of the two foxes for South Georgia affords me much pleasure and satisfaction and I am still further gratified by His Excellency's words of kindness and encouragement in the latter part of the above communication.

SECRETARY.

H.P. 278/26

GOVERNMENT HOUSE,
STANLEY.

22

28th May, 1928.

FALKLAND ISLANDS.

No. 183.

Sir,

I have the honour to inform you that I have had under consideration the question of the introduction into South Georgia of the silver fox with the view to the possible establishment in that Dependency of the fox fur industry.

2. I have come to the conclusion that it is not desirable that this Government should itself actively participate in such an undertaking but I think that it can well encourage private enterprise in this direction.

3. I would explain that the Magistrate, South Georgia, has been approached on the subject by several of the whaling managers who propose to obtain expert advice in Norway, where the silver fox is now extensively farmed, and to bring out a few pairs next season for breeding under supervision.

4. I have to ask therefore for your approval in principle to the proposed establishment of the industry and to the grant by this Government of reasonable facilities to those concerned. Such facilities would take the form primarily of the lease of suitable areas of land, for example Mutton /Island

ARNOLD HODSON

IVY

23.
27 SEP 1928
SECRETARY
FALKLAND ISLANDS

FALKLAND ISLANDS

Dorning Street,

No. 152

28 August, 1928.

Repls. 21-22.

Sir,

I have the honour to acknowledge the receipt of Mr. Hodson's despatch No. 183 of the 28th of May regarding the proposed introduction into South Georgia of the silver fox with the view to the establishment in that Dependency of the fox fur industry.

2. I have to inform you that I do not view with favour the proposal to introduce foxes unless the strictest supervision is to be exercised. I fear that if enlarged on the main Island they would exterminate penguins and other birds. If the foxes were turned adrift on say, Hutton Island they would devour such birds as exist there and then starve.

3. I think, however, that an experiment might be made on a small island if regular supplies of food can be assured. During the whaling season whale meat could be given and possibly elephant or other seal meat in the off season, but it is essential that the animals should be properly looked after as a whole-time occupation by one who understands them.

I have the honour to be,

Sir,

Your most obedient,
humble servant,

THE OFFICER ADMINISTERING

Handwritten in red:
The C.S.
M

Sir, I beg to thank you for your letter referring to a permit application directed by me to Mr Ellis in London through my agent in Scotland. It was very kind of you to offer to assist me in the matter in question.

At present I beg to request permission to introduce six horses and eighteen Foxes to Weddell Island, the latter to be forwarded later to Saint Island.

The Chilean Government have placed a ban on the exportation of other seals, Oryz, & other wild animals for a period of three years, but as my foxes are not being very well on the above Island I am anxious to increase their numbers before another new law is put in force.

I shall be very grateful for a telegraphic reply shortly after receipt of this letter. A steamer will be leaving here with other horses about the end of this month. I cannot bring any seal to carry this project through satisfactorily.

#

(39)

satisfactorily, even if the permit is
favorably received and granted within
a short period. The person might disappear
or be lost on the enclosed journey, or some
other means seem difficultly present
itself at any time.

While thanking you in anticipation,
I have the honor to be
your obedient servant
John Hamilton.

EXTRACT OF LETTER FROM MR. J. HAMILTON.

Magallanes. July 7th, 1931

The Honourable,
The Colonial Secretary,
STANLEY.

Sir,

.....

I am glad to say the Chilean Government by decree have again allowed the free exportation of foxes and those which I had in keeping are now being sent in the "Morven" under the permit obtained from Stanley on a previous occasion. The "Morven" goes direct to Fox Bay and afterwards to Staat Island and Weddell.

.....

I have the honour to be,
Your obedient servant,
(Sgd.) J. Hamilton.

39

Extract from Secretary of State's despatch, No. 136
of the 18th of October, 1932, - Original filed in M.P.
181/32.

Note - 10/10/32.

I enclose in this connection a copy of a note which has been prepared by one of the officers of the "Discovery" Committee which will be of assistance to you in considering further the question of the introduction of foxes into the Colony.

I have, etc.,

(SGD.) P. CUNLIFFE-LISTER.

GOVERNOR,
SIR JAMES O'GRADY, K.C.M.G.,
&c., &c., &c.

Copy.

Two species of fox are commonly spoken of as inhabiting Patagonia,

- 1. The "Little Fox" or perhaps "The Fox"
- 2. The "Monte Fox", that is "Hill Fox".

The nomenclature of the South American foxes is in some confusion but so far as I can make out the following species are those named above.

- 1. The "Little" Fox is Pseudalopex griseus
length, head and body, 550mm.
do. skull..... 125mm.
- 2. The "Monte" Fox is Pseudalopex culpaeus
length, head and body, 700mm
do skull..... 165mm.

P. culpaeus has a skull considerably more strongly developed than that of P. griseus and is obviously a much more powerful animal, as is suggested by the statement which I have often heard that the "Little" Fox will not attack sheep while the "Monte" Fox will attack lambs at anyrate if not adult sheep.

The Common Fox and the Silver Fox are intermediate in size between the two species named above.

On silver fox farms the animals are contained by a fence 6 ft. 6in. high with an additional 3 ft. overhang on the inside and the methods of farming entail constant supervision.

It may be that Mr. Evans intends to put foxes on the island and to let them fend for themselves, a visit being made from time to time for the purpose of killing off superfluous stock; he may have the hope that this procedure would produce a little profit from an island which is at present non-productive.

I do not consider that such a method would succeed unless steps were taken to ensure an adequate food supply for the animals.

Mutton/

Mutton is a good food for foxes and could easily be procured since cast sheep are abundant in the Falklands. The provision of a food supply would probably also minimise any inclination to wander.

There would be little fear of the foxes spreading to other islands in Falkland Sound since the tides run strongly in that channel.

So far as the introduction of Silver Foxes is concerned, it might be advisable to inform Mr. Evans that there is no chance of their succeeding without constant attention and the provision of suitable enclosures.

I can see no objection to the introduction of the "Little" Fox (P. griseus) if steps are taken to provide the animals with sufficient food.
