Sir

I noted in the catalogue to be printed for the Museum (in the list of Birds known in the Falklands) that "it would be interesting to see if a number of the English House Sparrow. = *Passer domesticus* that arrived here on board three whaling factories & one Cargo Boat in Nov-December 1919 from Monte Video survived." Since their arrival I have not seen them until now. A pair have now established themselves in a hole in the East end of my house between the roof & the match-lining.

This bird is probably the most destructive of all small birds that have been introduced into various places.

Almost the whole of America is over-run with them including Canada, Rio de Janeiro, Monte Video, Buenos Aires, also parts of the Cape & Australia. They are very destructive to gardens, & to native Finches,

In order to prevent a worse spreading I would suggest that all seen, should be shot on sight, a pair of them in the Museum would be sufficient to prove their arrival, to Science & would in my mind, be much more useful there, than alive.

To The Hon.
Colonial Secretary

I have the honour to be
Sir
your obedient servant
A. J. Bennett
