

REPORT ON THE SPANISH

SOUTHWEST ATLANTIC FISHERIES

1984

SOUTHWEST ATLANTIC FISHERIES 1983

1.- INTRODUCTION

The first Spanish registered vessels to visit the South West Atlantic - Fishing Grounds, outside the 200 miles off Argentina and around the Falkland Islands, started fishing during the last days of february 1983.

The activity of the Spanish Fleet along 1983 has been developed between February and December, with the main activity during April and October.

Vessels operating in those fishing grounds are all of them modern freezing stern trawlers of advanced technology.

2.- THE MAIN FISHERIES RESOURCES

We may conclude from the obtained results during 1983 that the area is a very rich one as far as fisheries resources is concerned. The main commercial species during 1983 have been: short-finned squid (in spanish "pota" --- "Illex argentinus"), long-finned squid (in spanish "calamar", "Loligo pataconica") and hake ("Merluccius hubbsi").

There are other species of comercial interest which appear as a by- --- catch of the mayor squid fishery like: KINKLIP, RED HAKE, CONGER-EEL, SKATES, etc..

The presence of the mayor species has shown a marked seasonality. Catches of "pota" and hake have been most significant during February-July period. From July to November the "pota" did completely dissapear from the fishing - grounds, appearing again in December. Hake, although it maintains a steady - presence all along the year, has shown minimum abundances between August and December.

On the contrary, the "calamar" started to show up in the fishery in july, being very abundant up till October. During November and December its -- precense in the fishery has been almost nill.

3.- CHARACTERISTICS OF THE VESSELS AND FISHING GEAR

Vessels composing the Spanish Fleet in the South West Atlantic Fishing Grounds, are all modern stern freezer trawlers of modern technology with a great catching and freezing capacity.

As far as the size is concerned, they are all above 350 G.R.T. and 1000 H.P. in the main engine, some of them greater than 2000 G.R.T. and 5000 H.P.

The fishing gear used for catching "pota" and "calamar" are all bottom trawls, generally with a great vertical opening in the mouth, the gear has sted-bobbins in the foot rope, therefore assuming that the gear does not work too close to the bottom. Towing speed is around four knots.

4.- LANDINGS DURING 1963

4.1. Fisheries of "pota" and "hake"

VESSEL SIZE	G.R.T. RANGE	NUMBER OF VESSELS	S.F>	MAKE /
5	150 - 499,9	3	783	600
6	500 - 999,9	2	480	470
7	1000 - 1999,9	3	1188	1530
S	+ 2000	1	833	600
TOTAL		9	3184	3200

4.2. Mixed Fishery ("pota", hake and "calamar")

VESSEL SIZE	G.R.T. RANGE	NUMBER OF VESSELS	"POTA" (MT)	HAKE (MT)	"CALAMAR" (MT)
5	150 - 499,9	3	181	410	590
6	500 - 999,9	1	-	41	150
TOTAL		4	131	451	740

4.3. "Calamar" Fishery

VESSEL SIZE CATEGORY	G.R.T. RANGE	NUMBER OF VESSELS	"CALAMAR" (TONS)
5	150 - 499,9	5	1985
6	500 - 999,9	1	537
7	1000 - 1999,9	11	11162
8	+ 2000	2	2520
	TOTAL	19	16204

✓ 05

5.- MONTHLY EVOLUTION OF THE LANDINGS IN SPANISH PORTS DURING 1983

	<u>"POTA"</u>	<u>HAKE</u>	<u>"CALAMAR"</u>
APRIL	320	140	-
MAY	788	930	-
JUNE	1033	850	-
JULY	413	530	-
AUGUST	630	750	-
SEPTEMBER	-	-	352
OCTOBER	-	-	6263
NOVEMBER	-	-	9029
DECEMBER	-	-	560
TOTAL	3184	3200,	16204

6.- MONTHLY PRESENCE OF THE SPANISH VESSELS IN THE SOUTH WEST ATLANTIC FISHERY

6.1. Hake and "Pota" Fishery

This fishery has been carried out during 1983, mainly in the February-July period. The presence of Spanish vessels by category according to the GRT, has been as follows:

	NUMBER OF VESSELS					
	FEBRUARY	MARCH	APRIL	MAY	JUNE	JULY
Vessels OTB-5						
(150-499,9 GRT)	---	---	2	3	3	2
Vessels OTB-6						
(500-999,9 GRT)	1	1	2	2	1	1
Vessels OTB-7						
(1000-1999,9 GRT)	---	2	3	1	1	1
Vessels OTB-8						
(+ 2000 GRT)	---	1	1	1	1	---

6.2. "Calamar" Fishery

This fishery has been carried out during the July-October period. The presence of Spanish vessels has been as follows:

	NUMBER OF VESSELS				
	JULY	AUGUST	SEPTEMBER	OCTOBER	NOVEMBER
Vessels OTB-5					
(150-499,9 GRT)	4	6	4	2	-
Vessels OTB-6					
(500-999,9 GRT)	1	1	1	-	-
Vessels OTB-7					
(1000-1,999,9 GRT)	2	8	11	9	2
Vessels OTB-8					
(+ 2000 GRT)	1	2	2	2	-

7.- CATCH PER UNIT OF EFFORT

Catch per effective fishing day (day in which a fishing activity has been carried out), and per vessel according to the GRT and by each of the main species sought, are presented. Those data correspond to the activity during 1983:

	MEAN CATCH PER DAY FISHED		
	HAKE	"POTA"	"CALAMAR"
VESSELS OTB-5 (150-499,9 GRT)	2,89	2,87	6,21
VESSELS OTB-6 (500-999,9 GRT)	3,81	4,25	6,92
VESSELS OTB-7 (1000-1,999,9 GRT)	8,88	5,64	17,81
VESSELS OTB-8 (+ 2000 GRT)	9,42	8,01	20,12

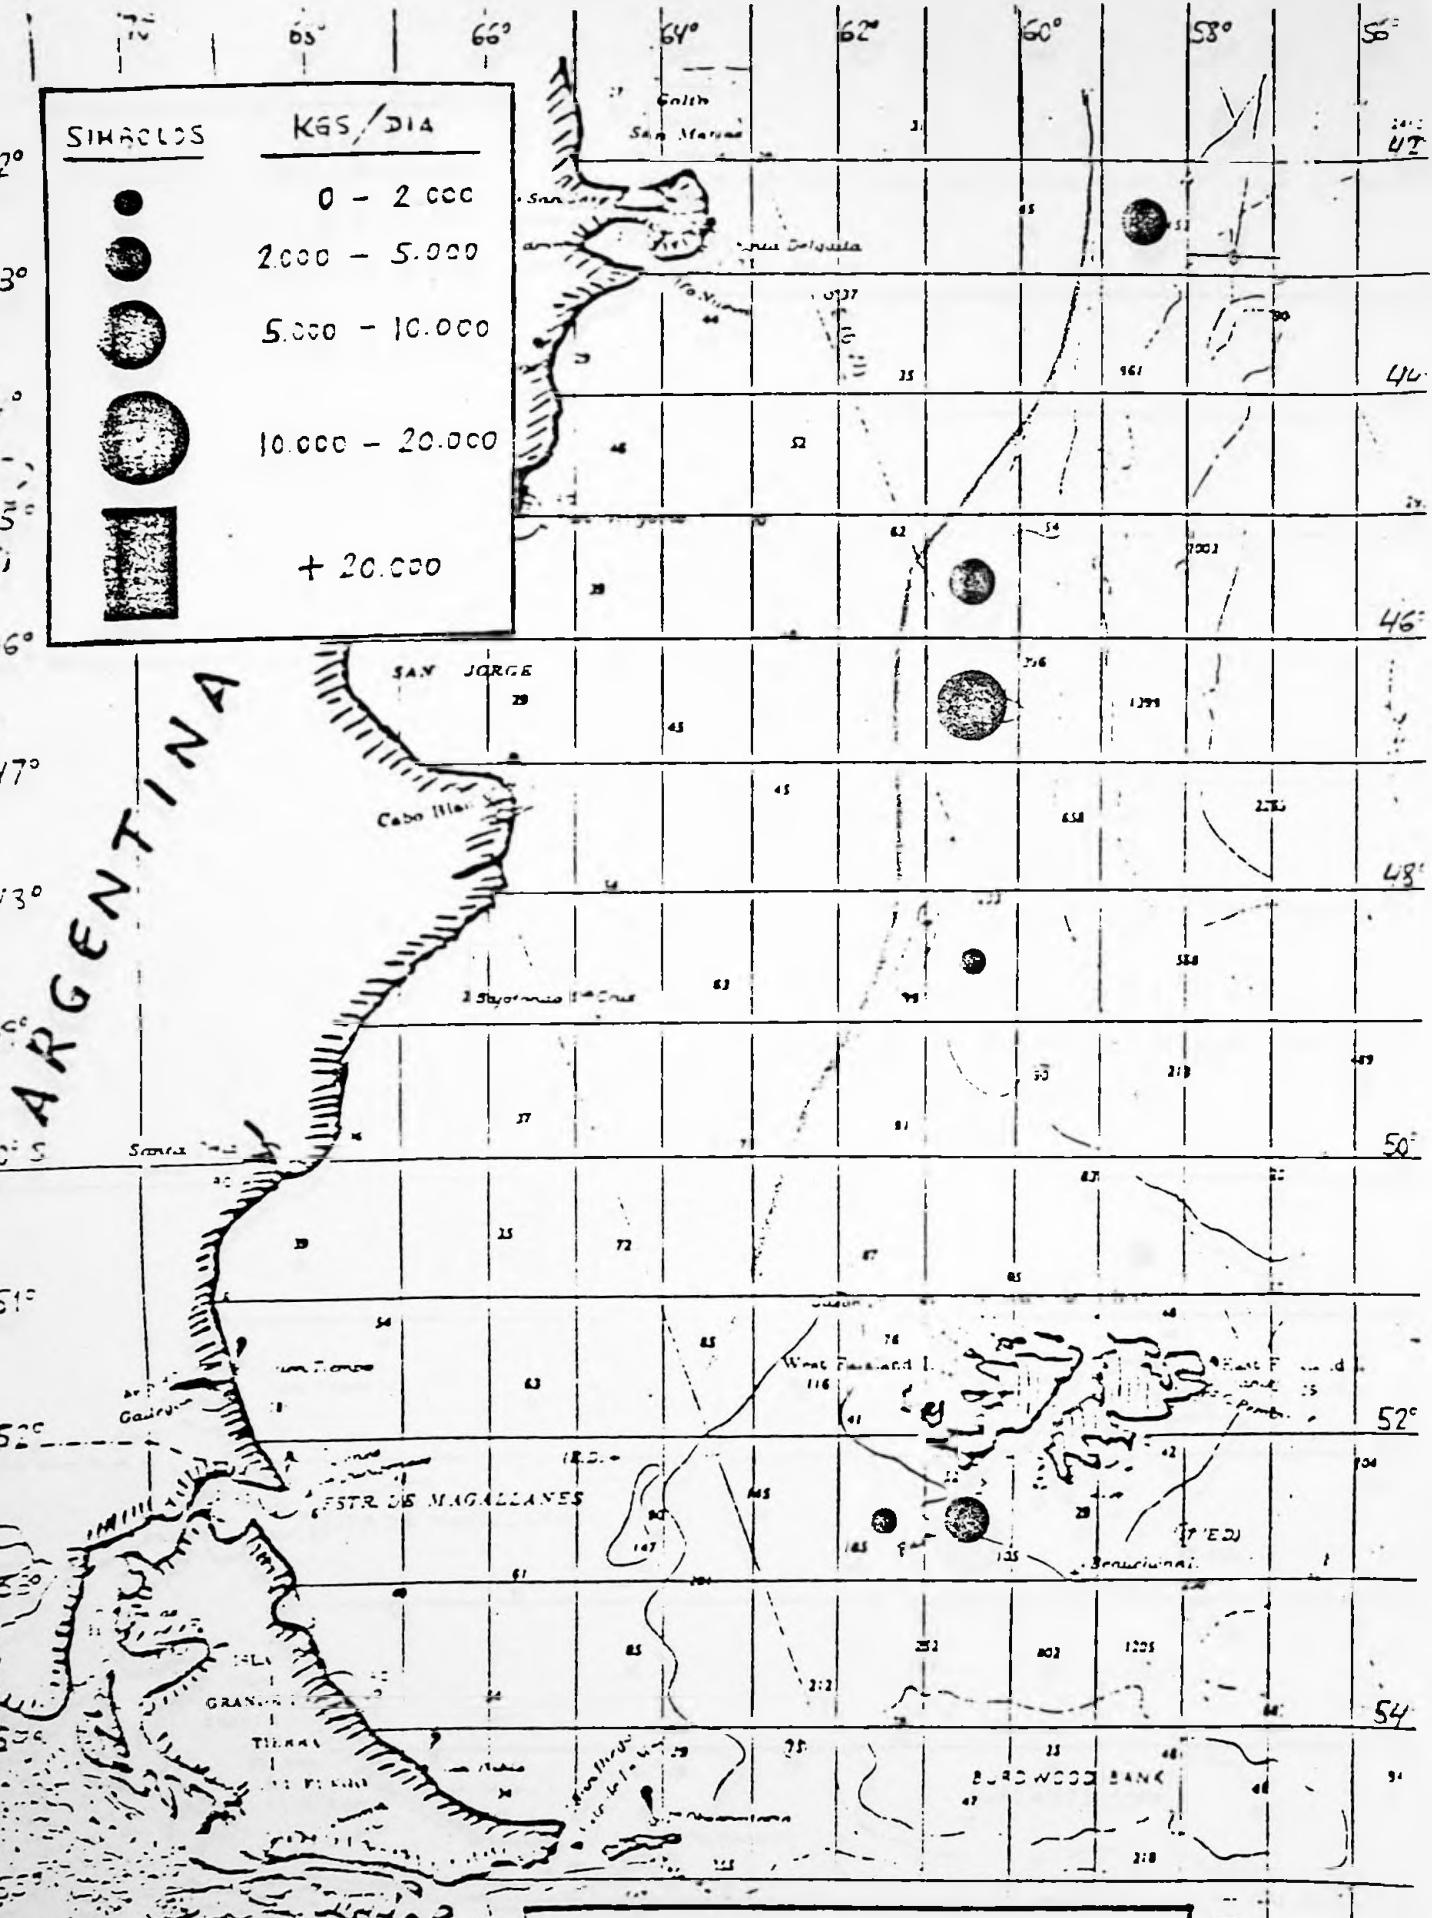

8.- DISTRIBUTION AND ABUNDANCE OF MAIN CATCH SOUGHT

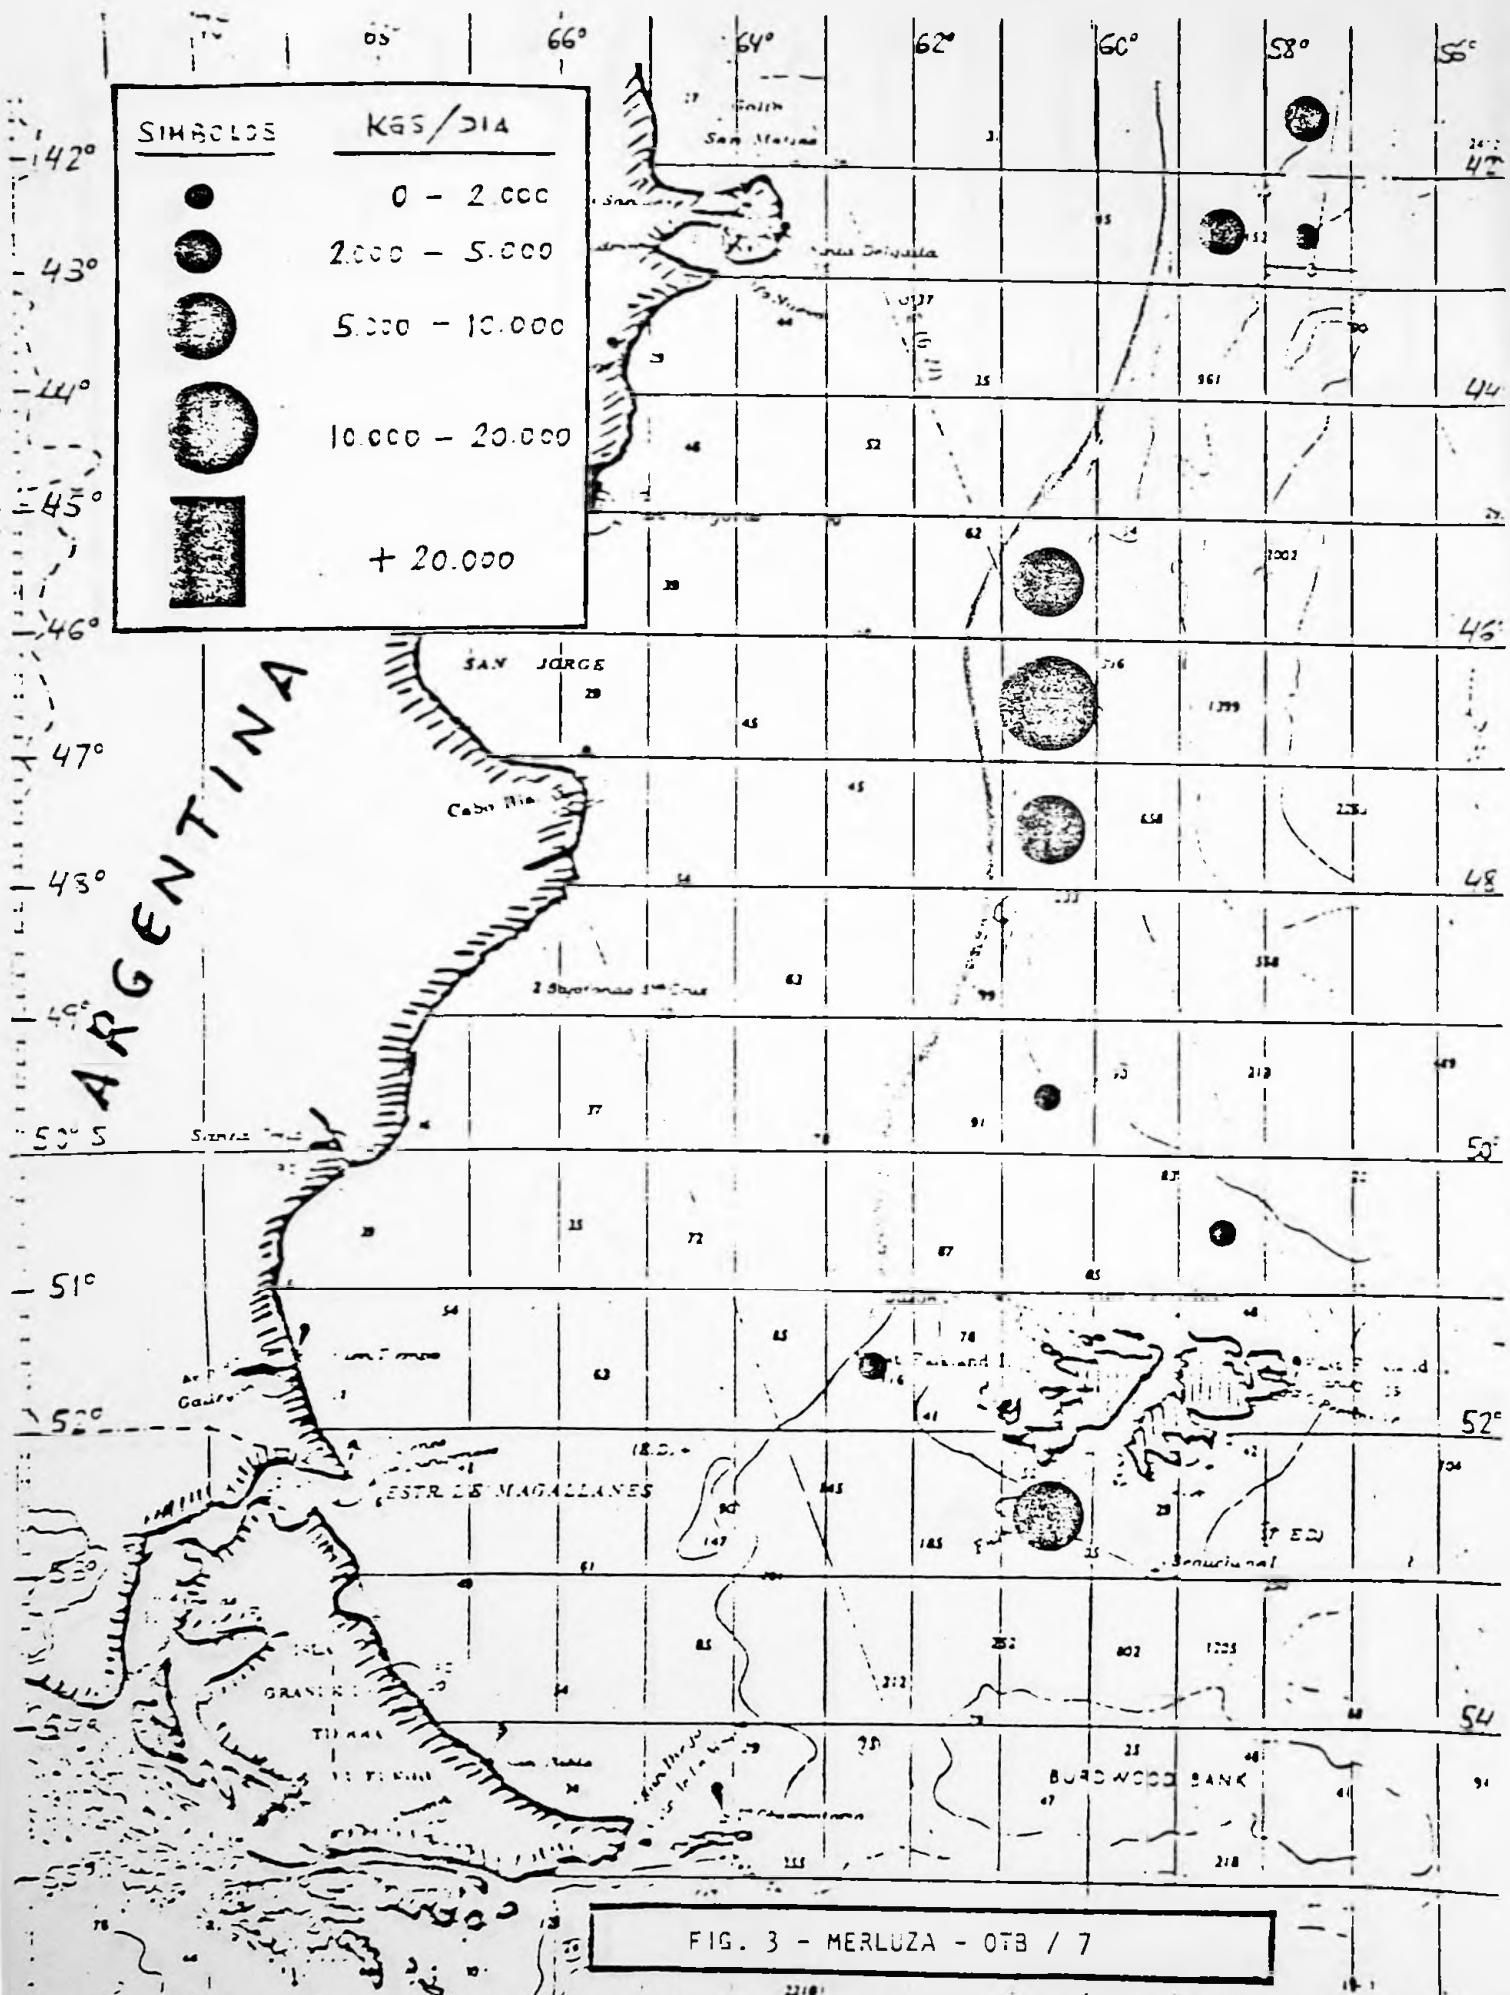

The figures shown here represent the distribution and a representation of the abundance of the catches made the Spanish fleet during 1983.

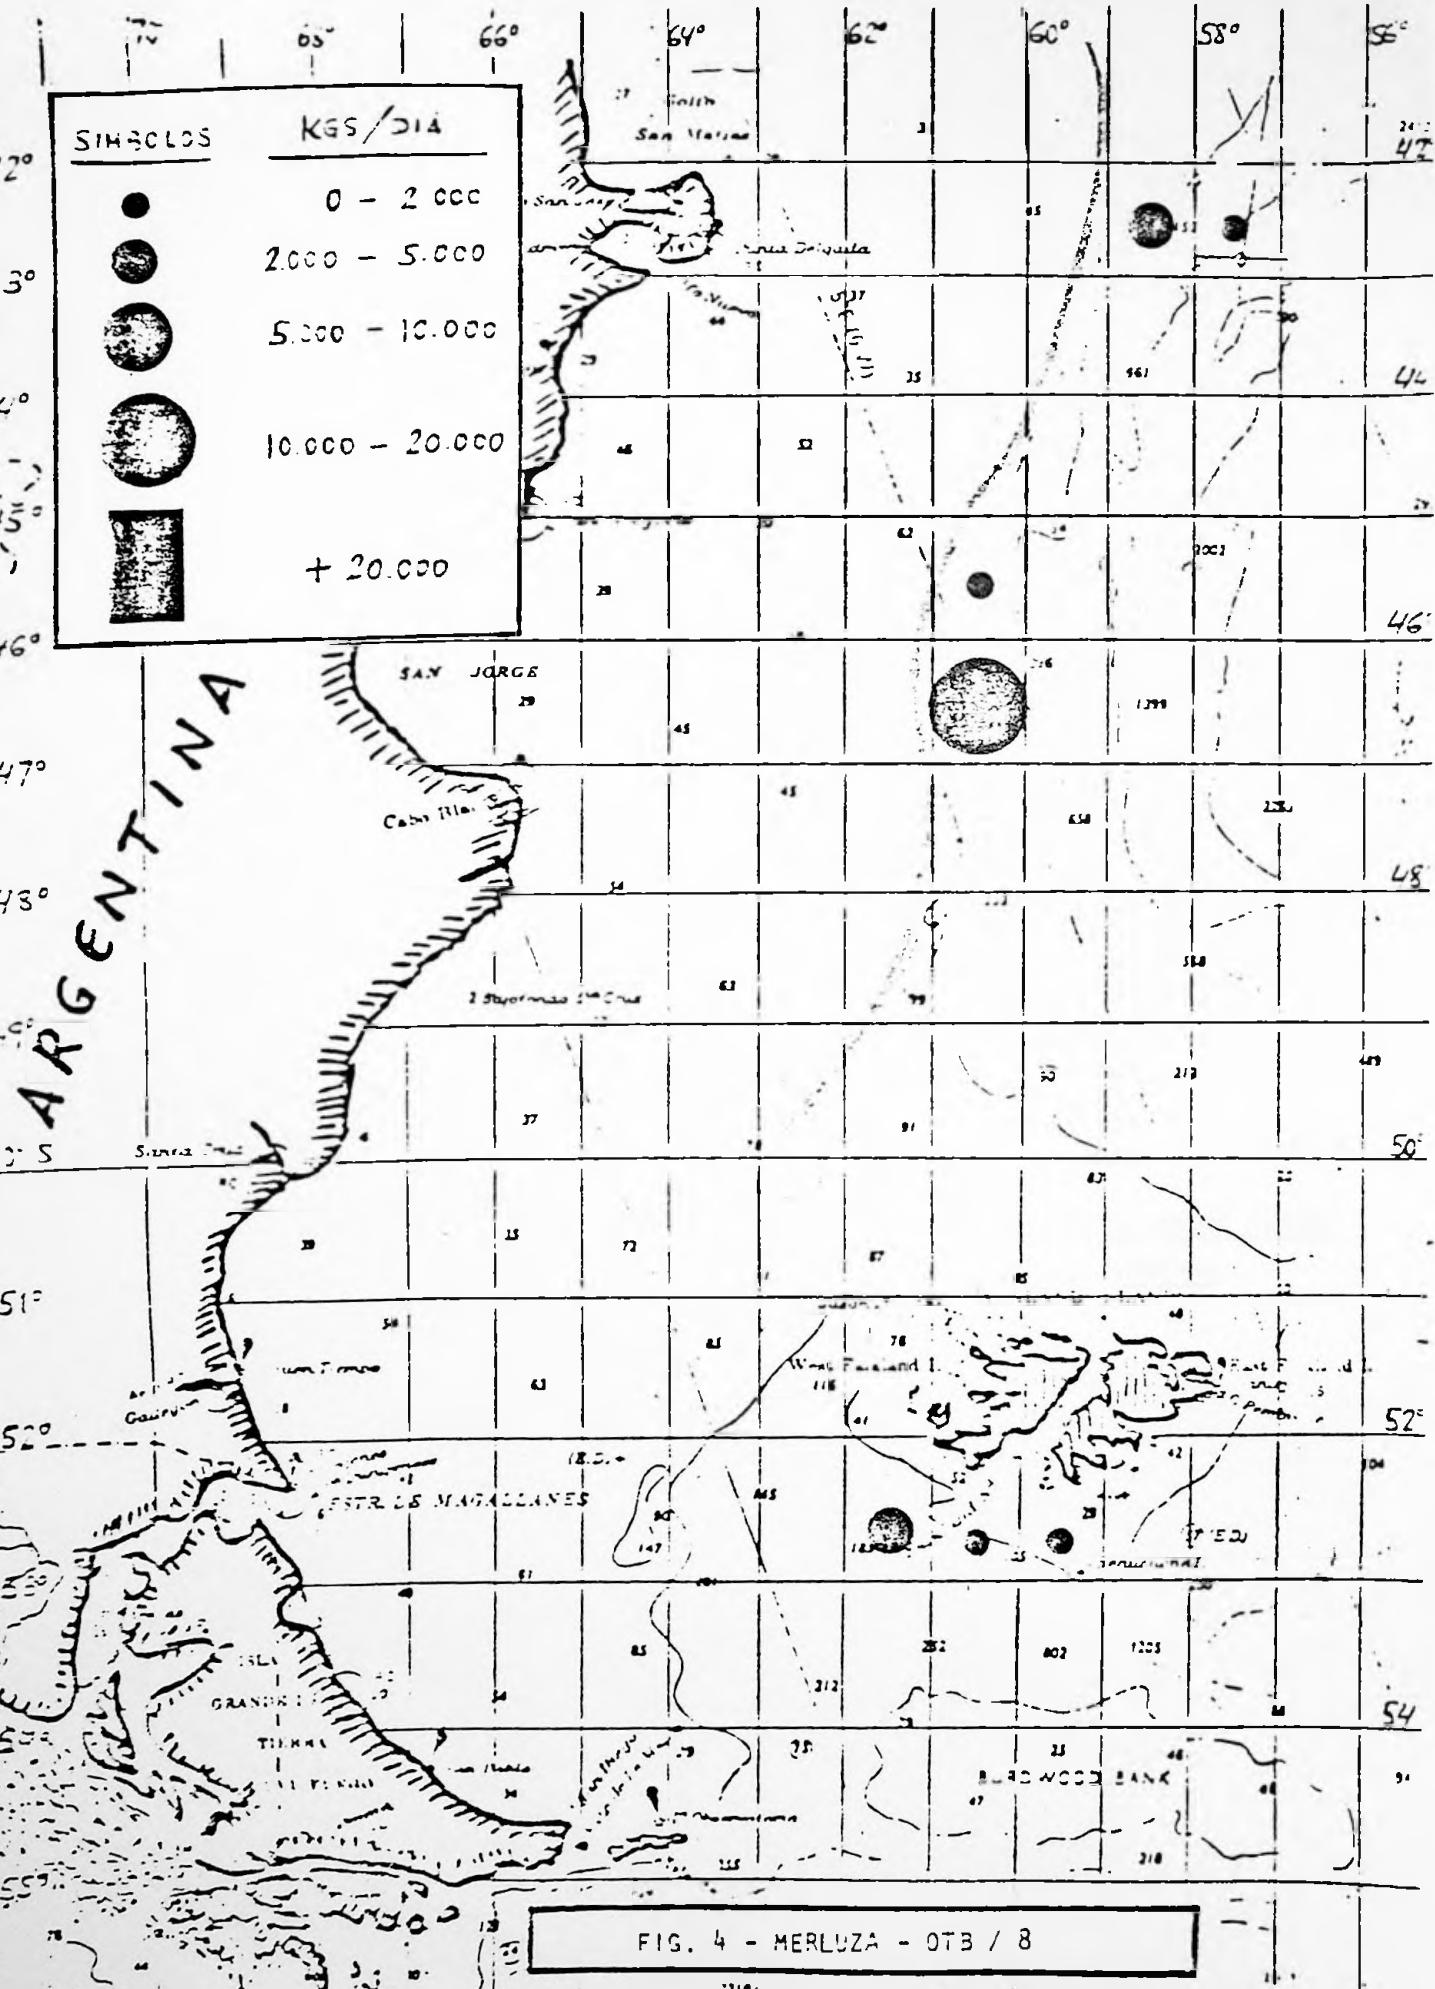

The mean catch per day fished obtained for each of the main species: hake, "calamar" and "pota", has been distributed in 1 degree latitude x 1 degree longitude. Abundance of each species has been defined through - the catch per unit of effort. Using this index for each one of the different size categories according to their GRT.

8.1. DISTRIBUTION AND ABUNDANCE OF HAKE
("MERLUZA") PER VESSEL CATEGORY

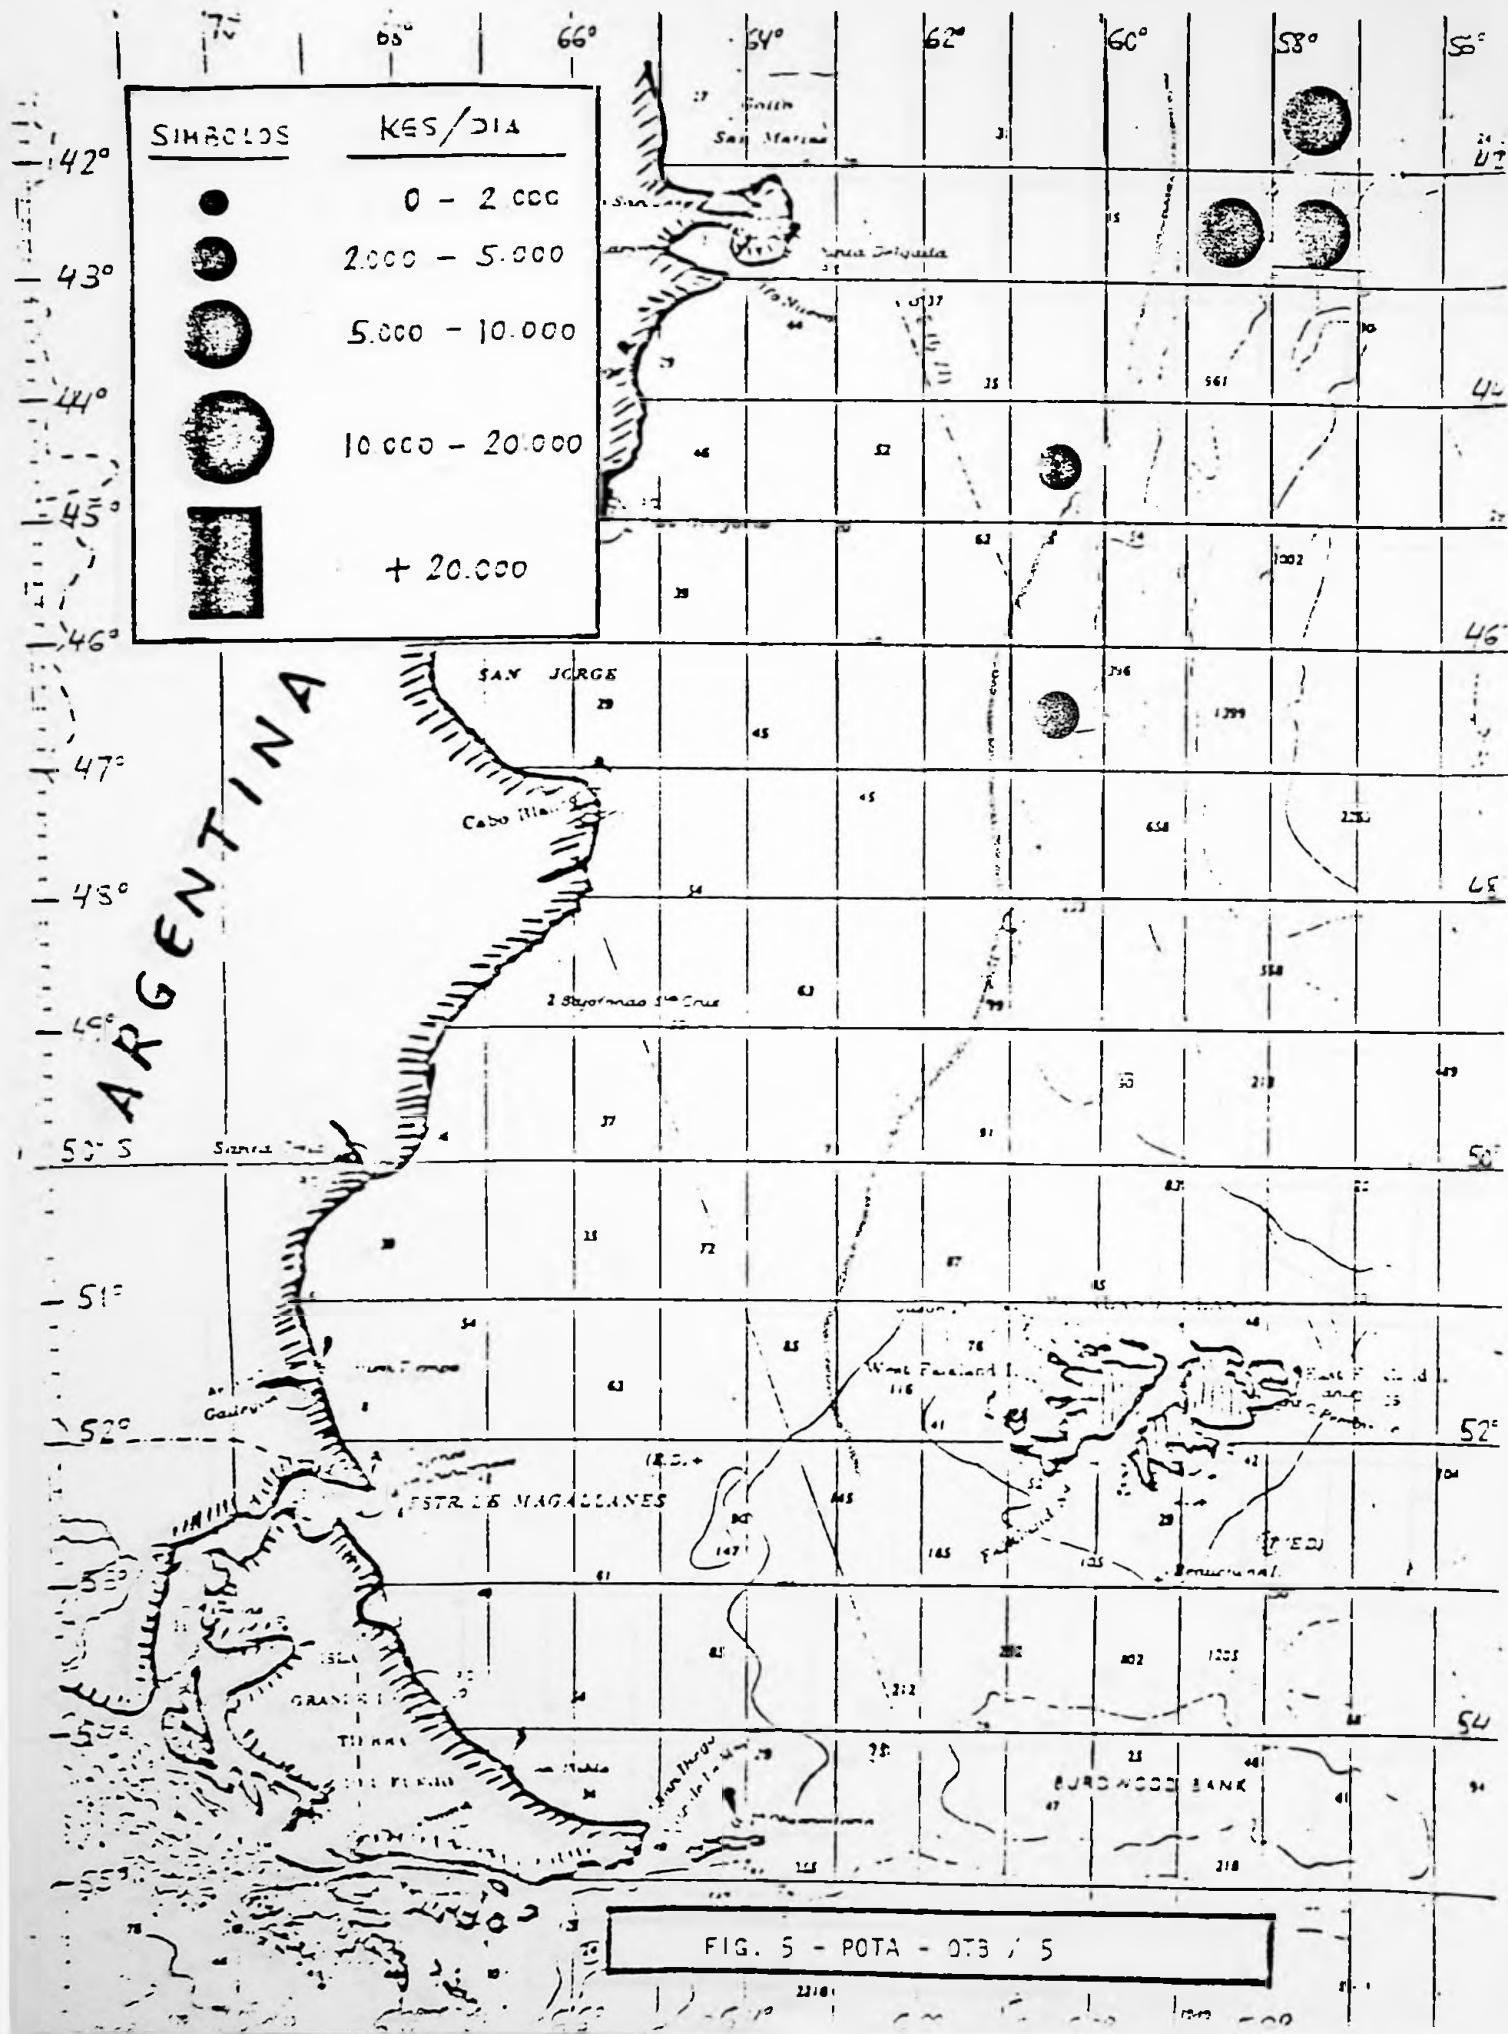

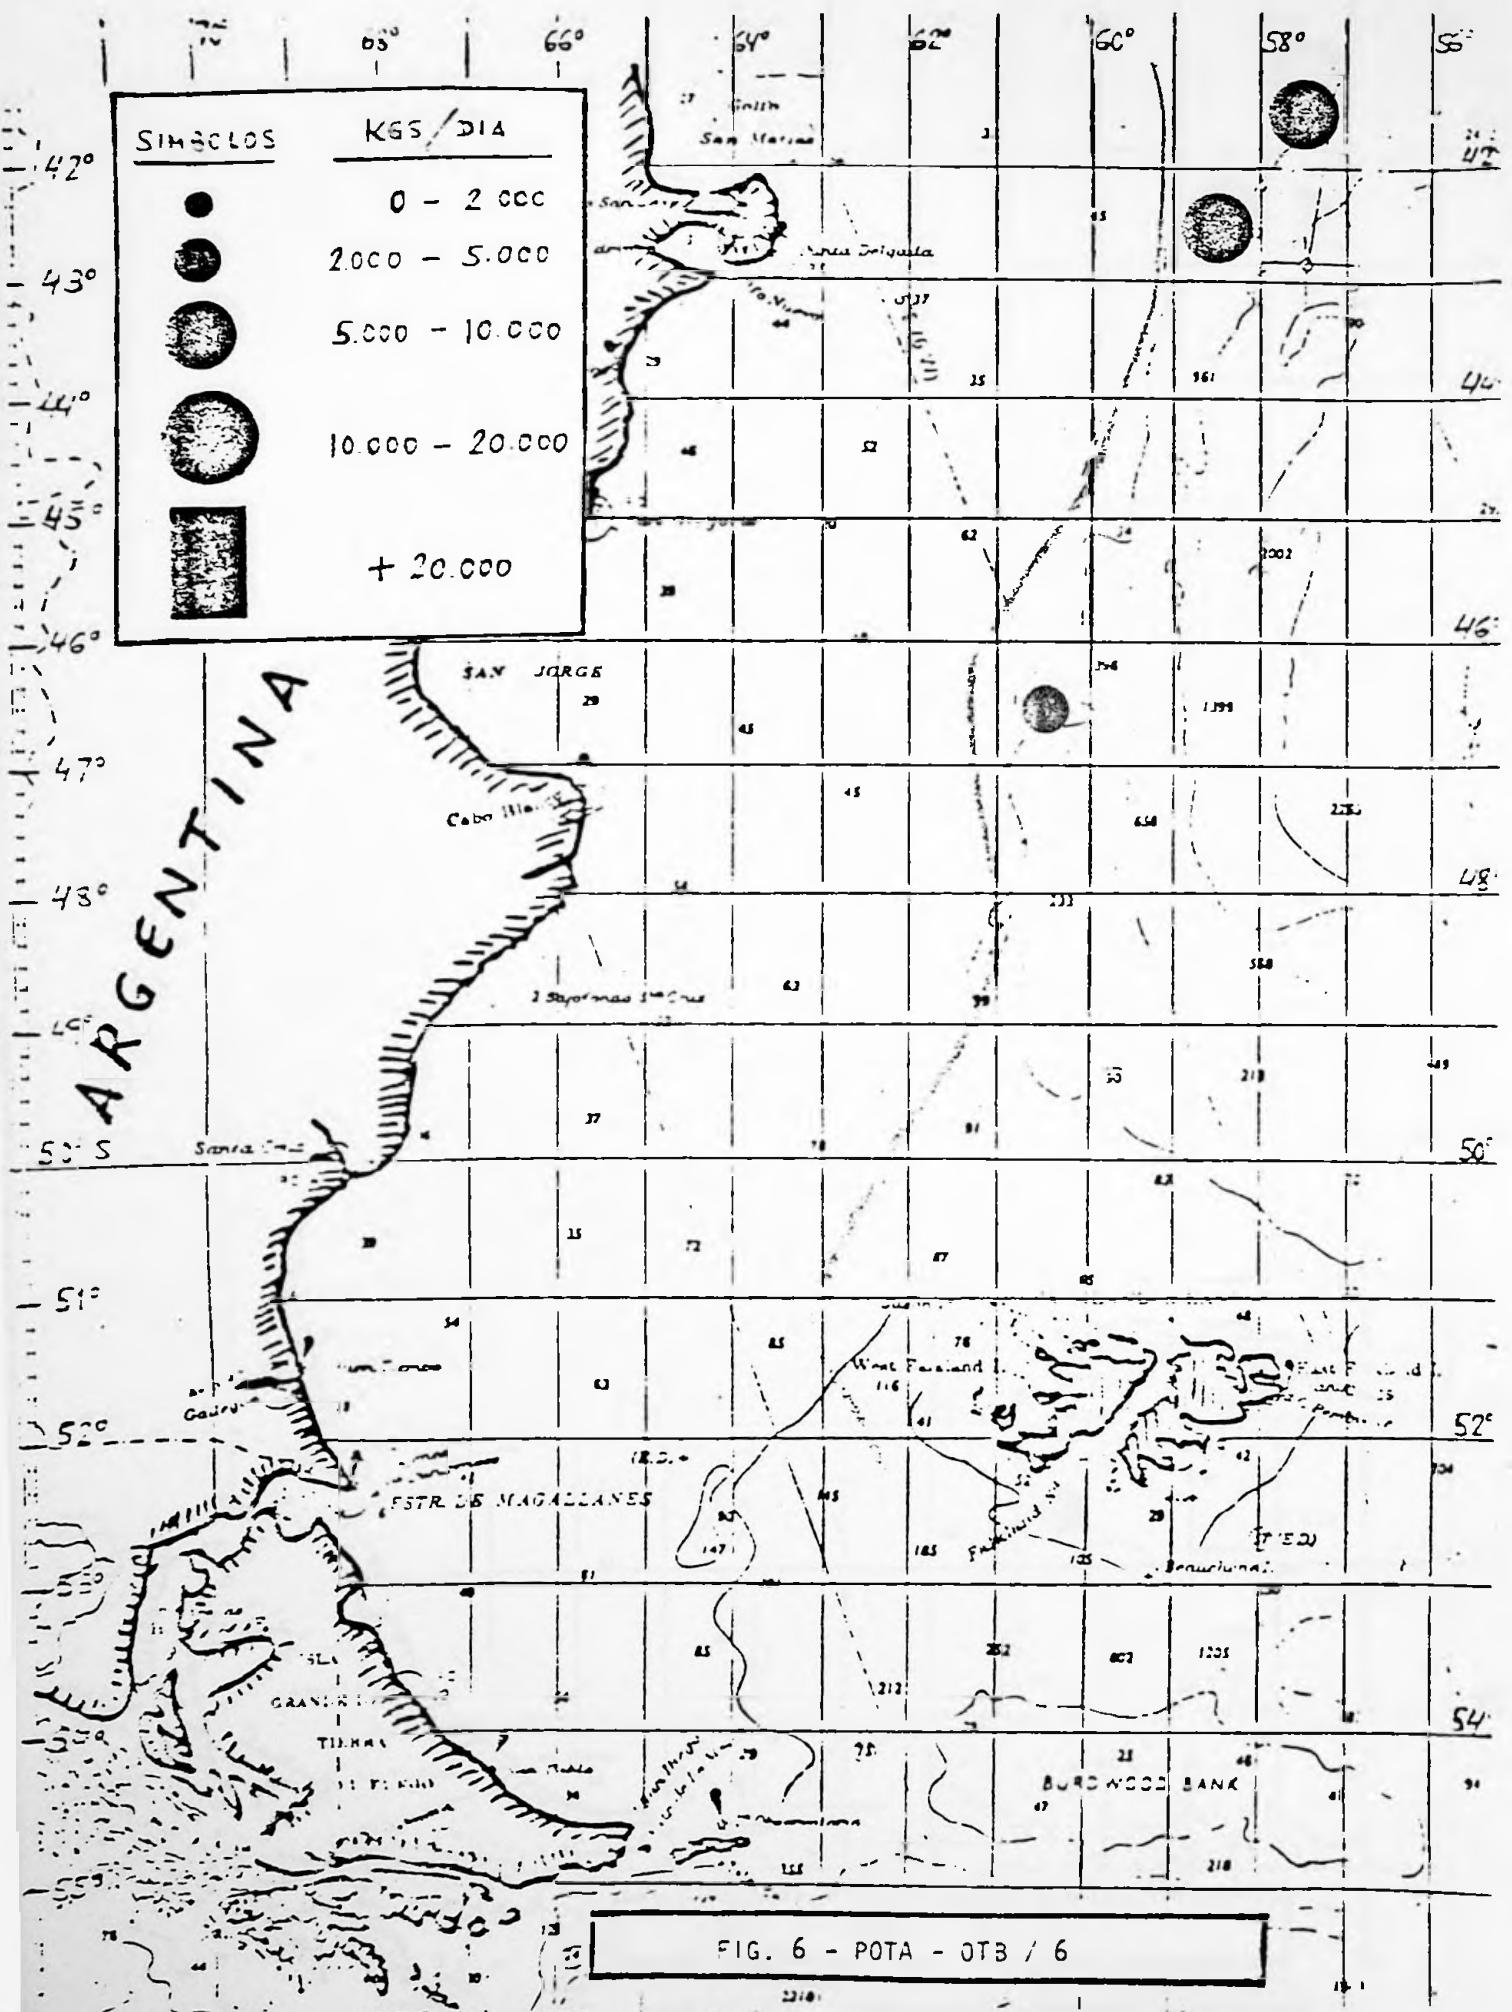

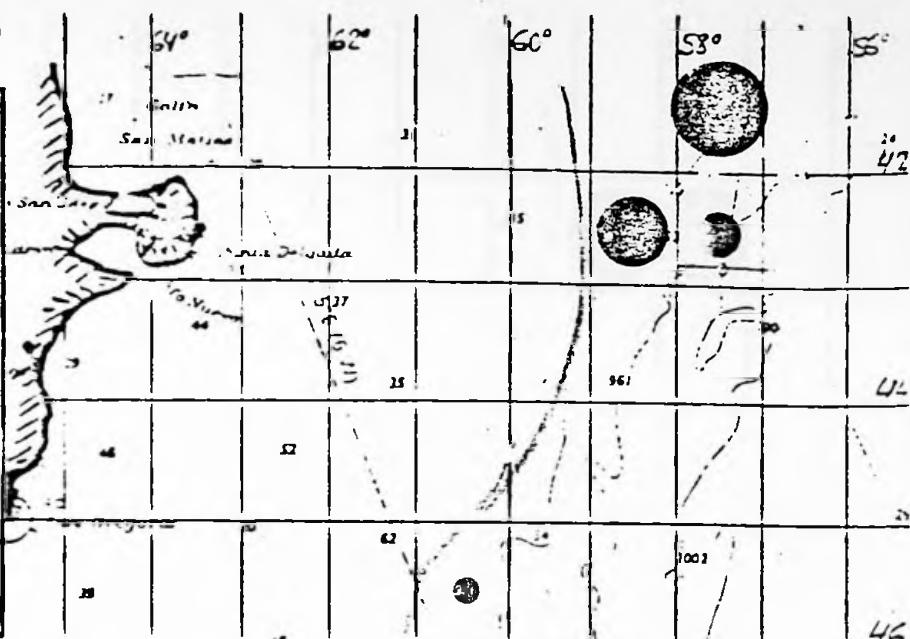

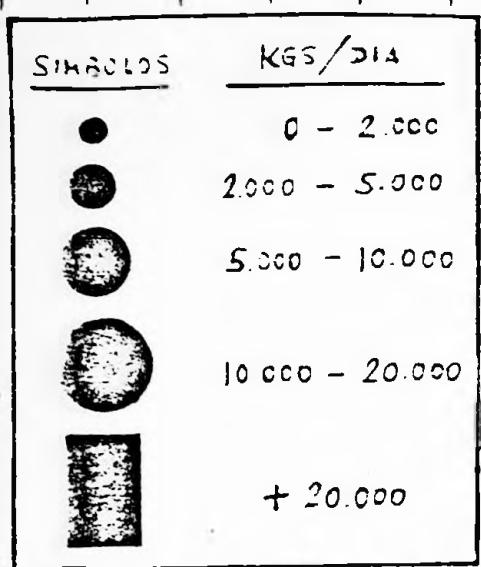

8.2. DISTRIBUTION AND ABUNDANCE OF SHORT FINNED
SCUID ("POTA") PER VESSEL CATEGORY

ARGENTINA

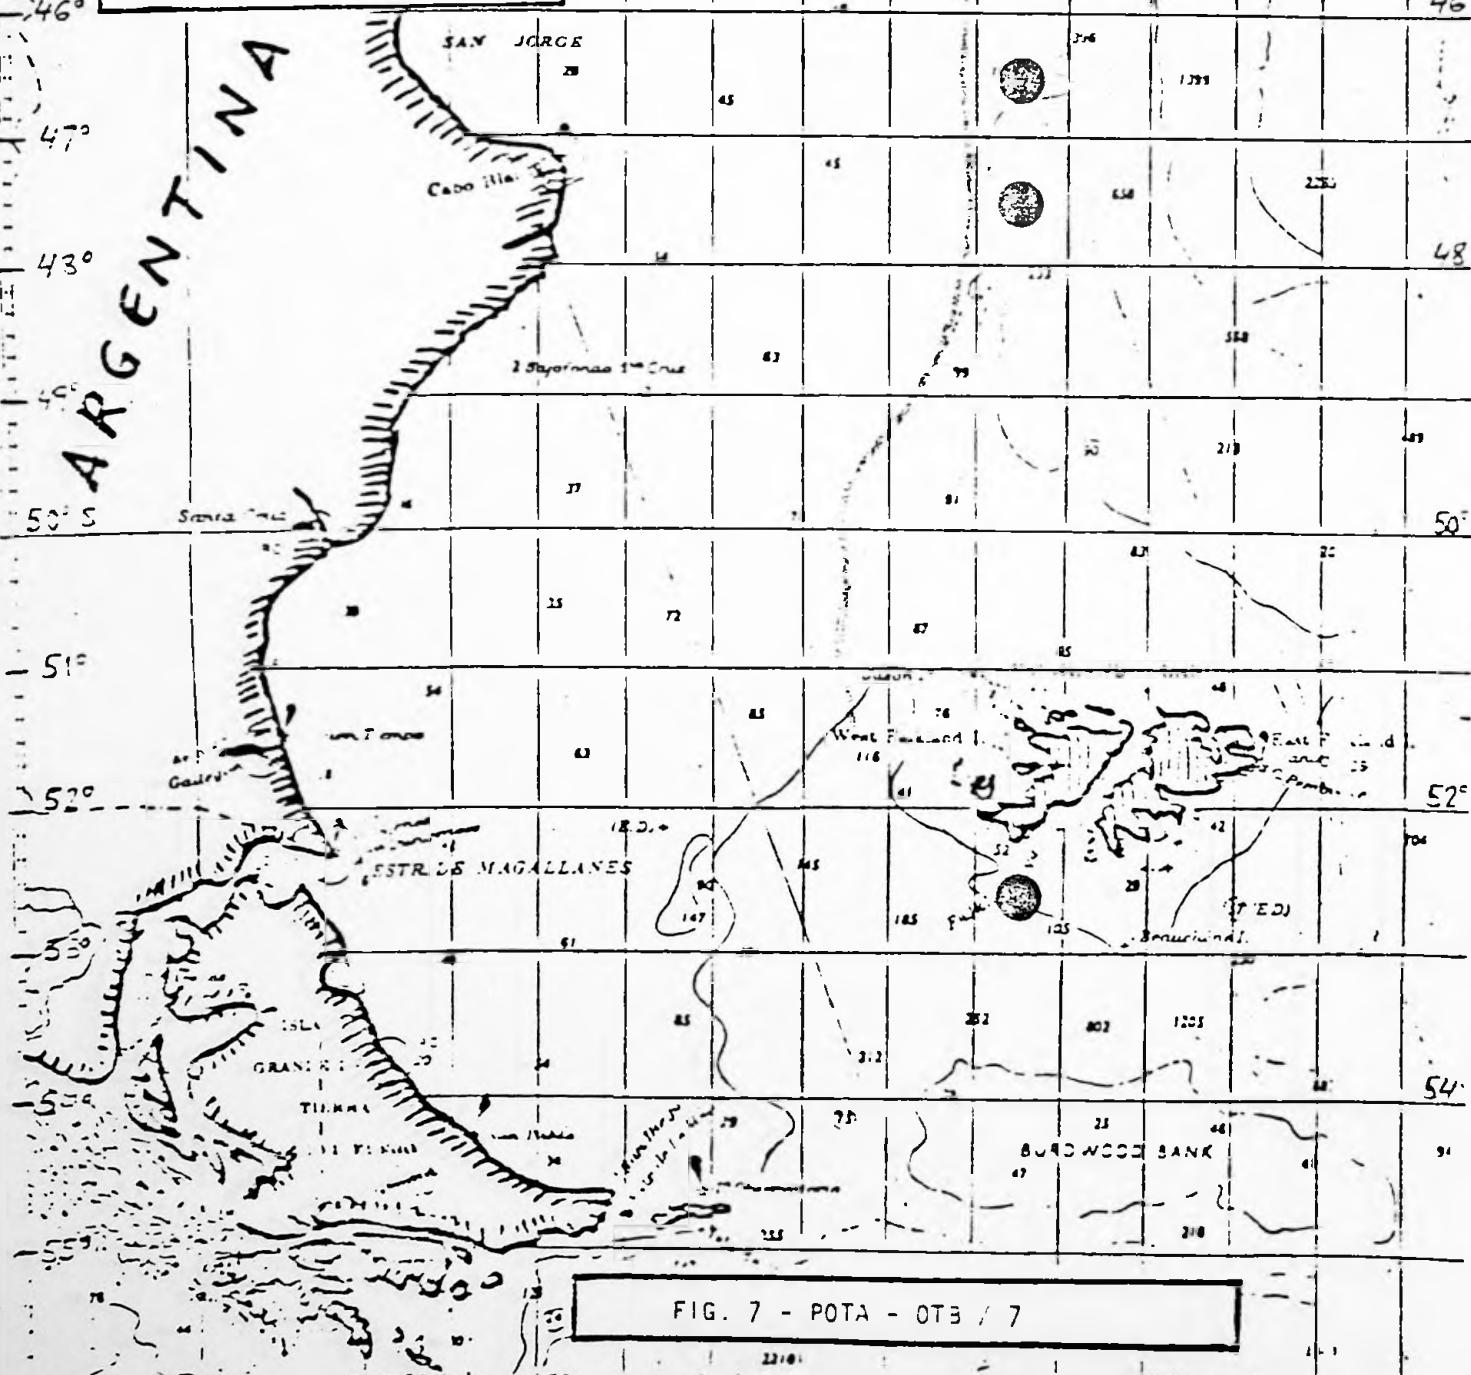

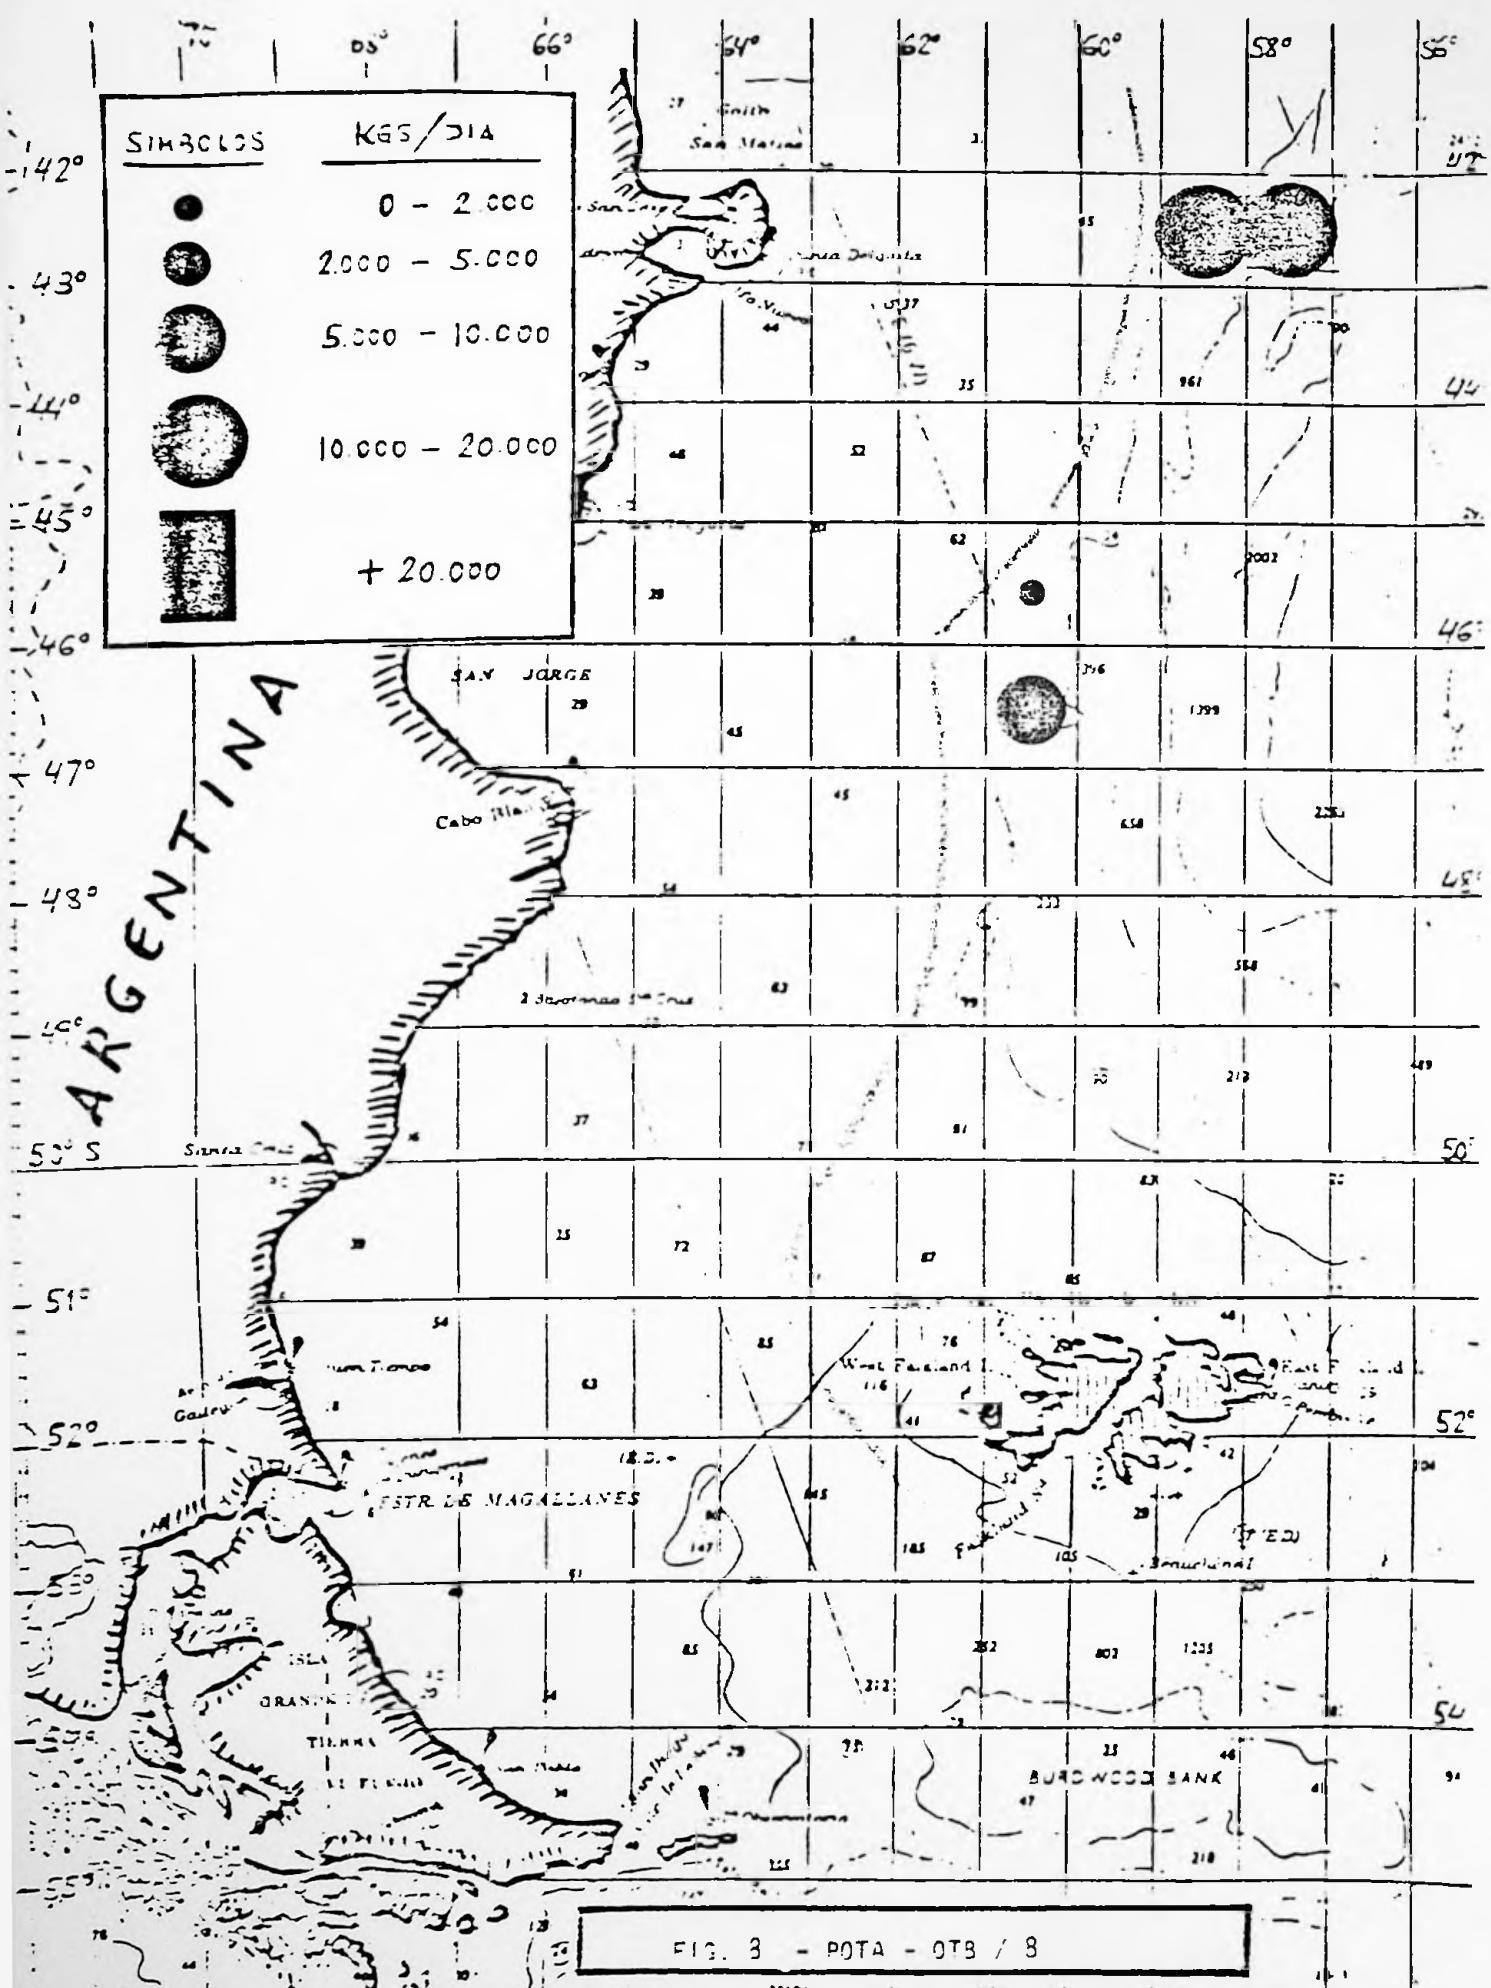

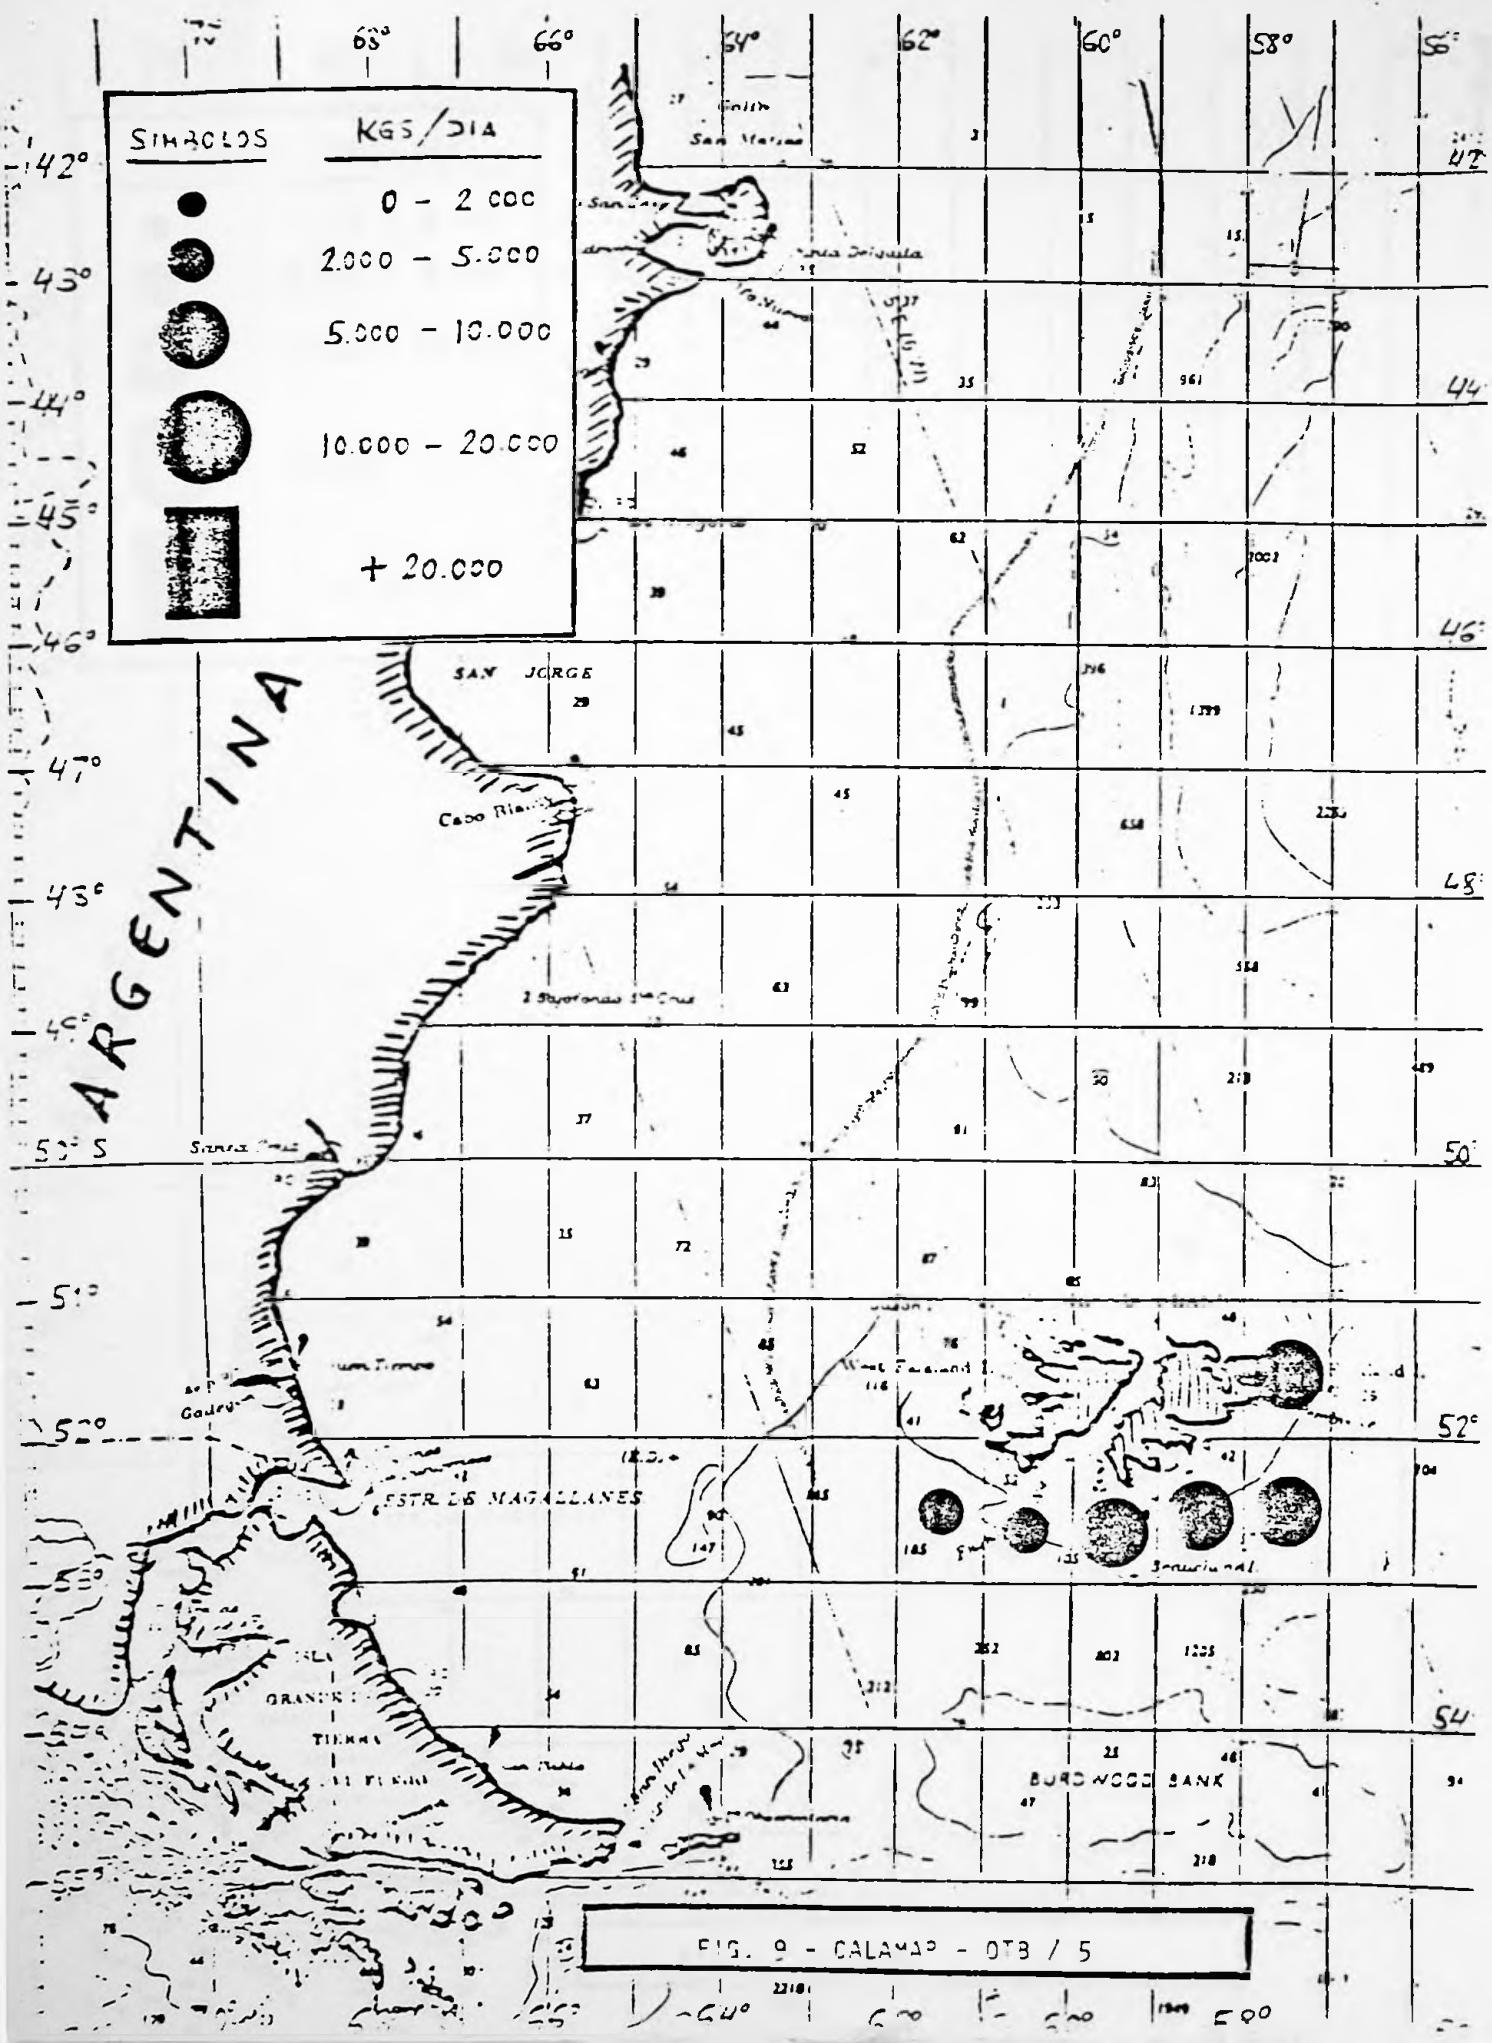

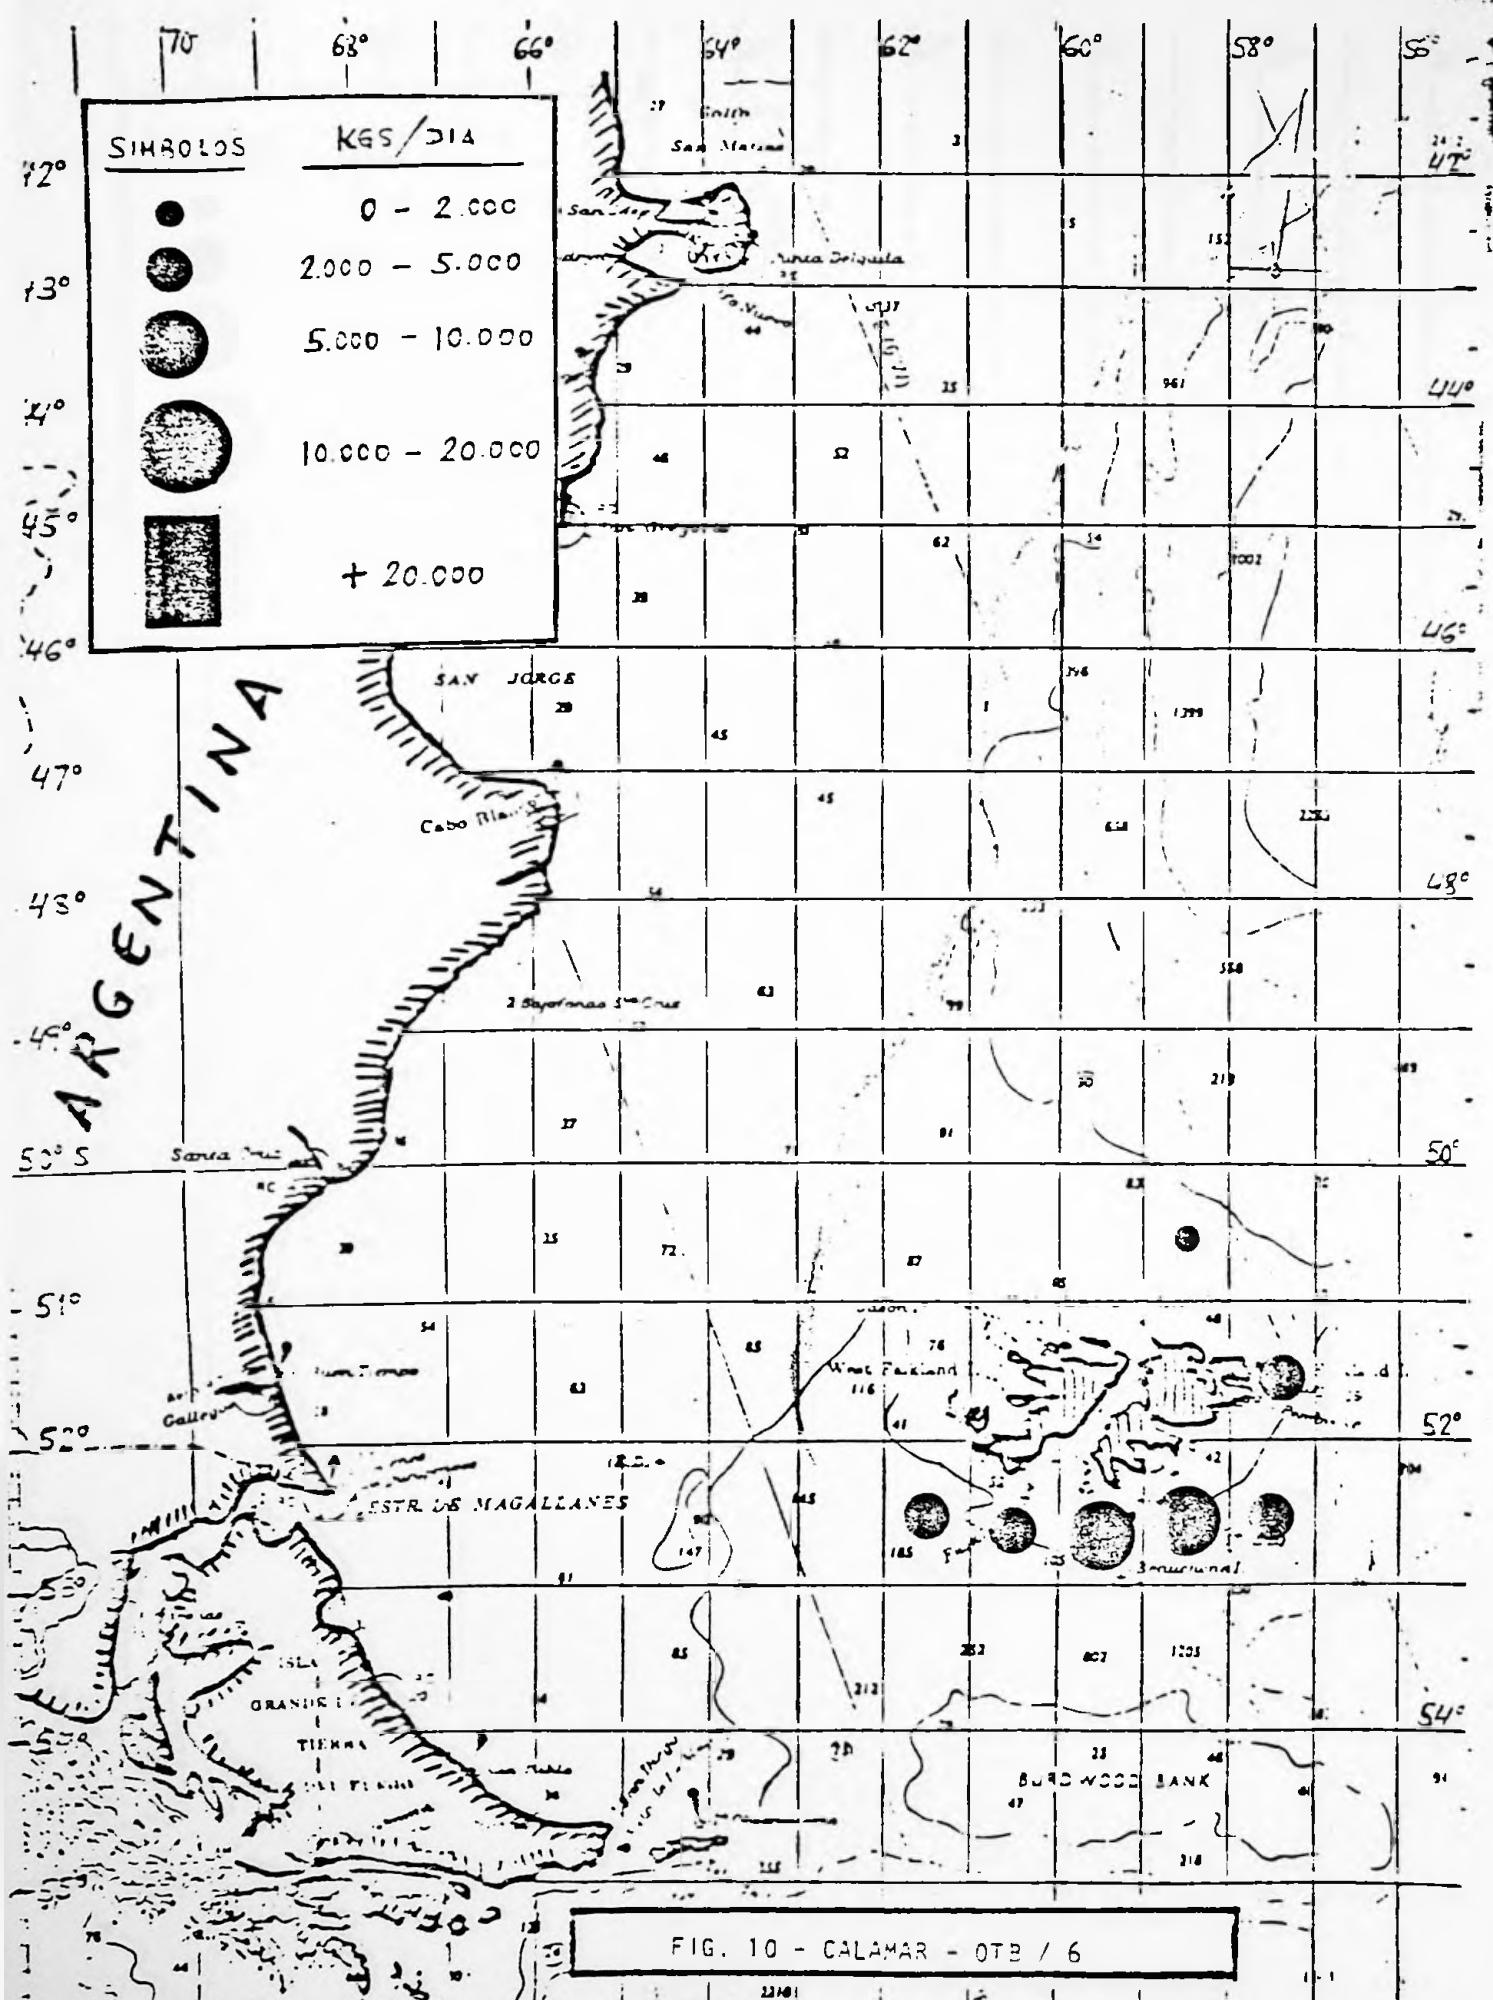

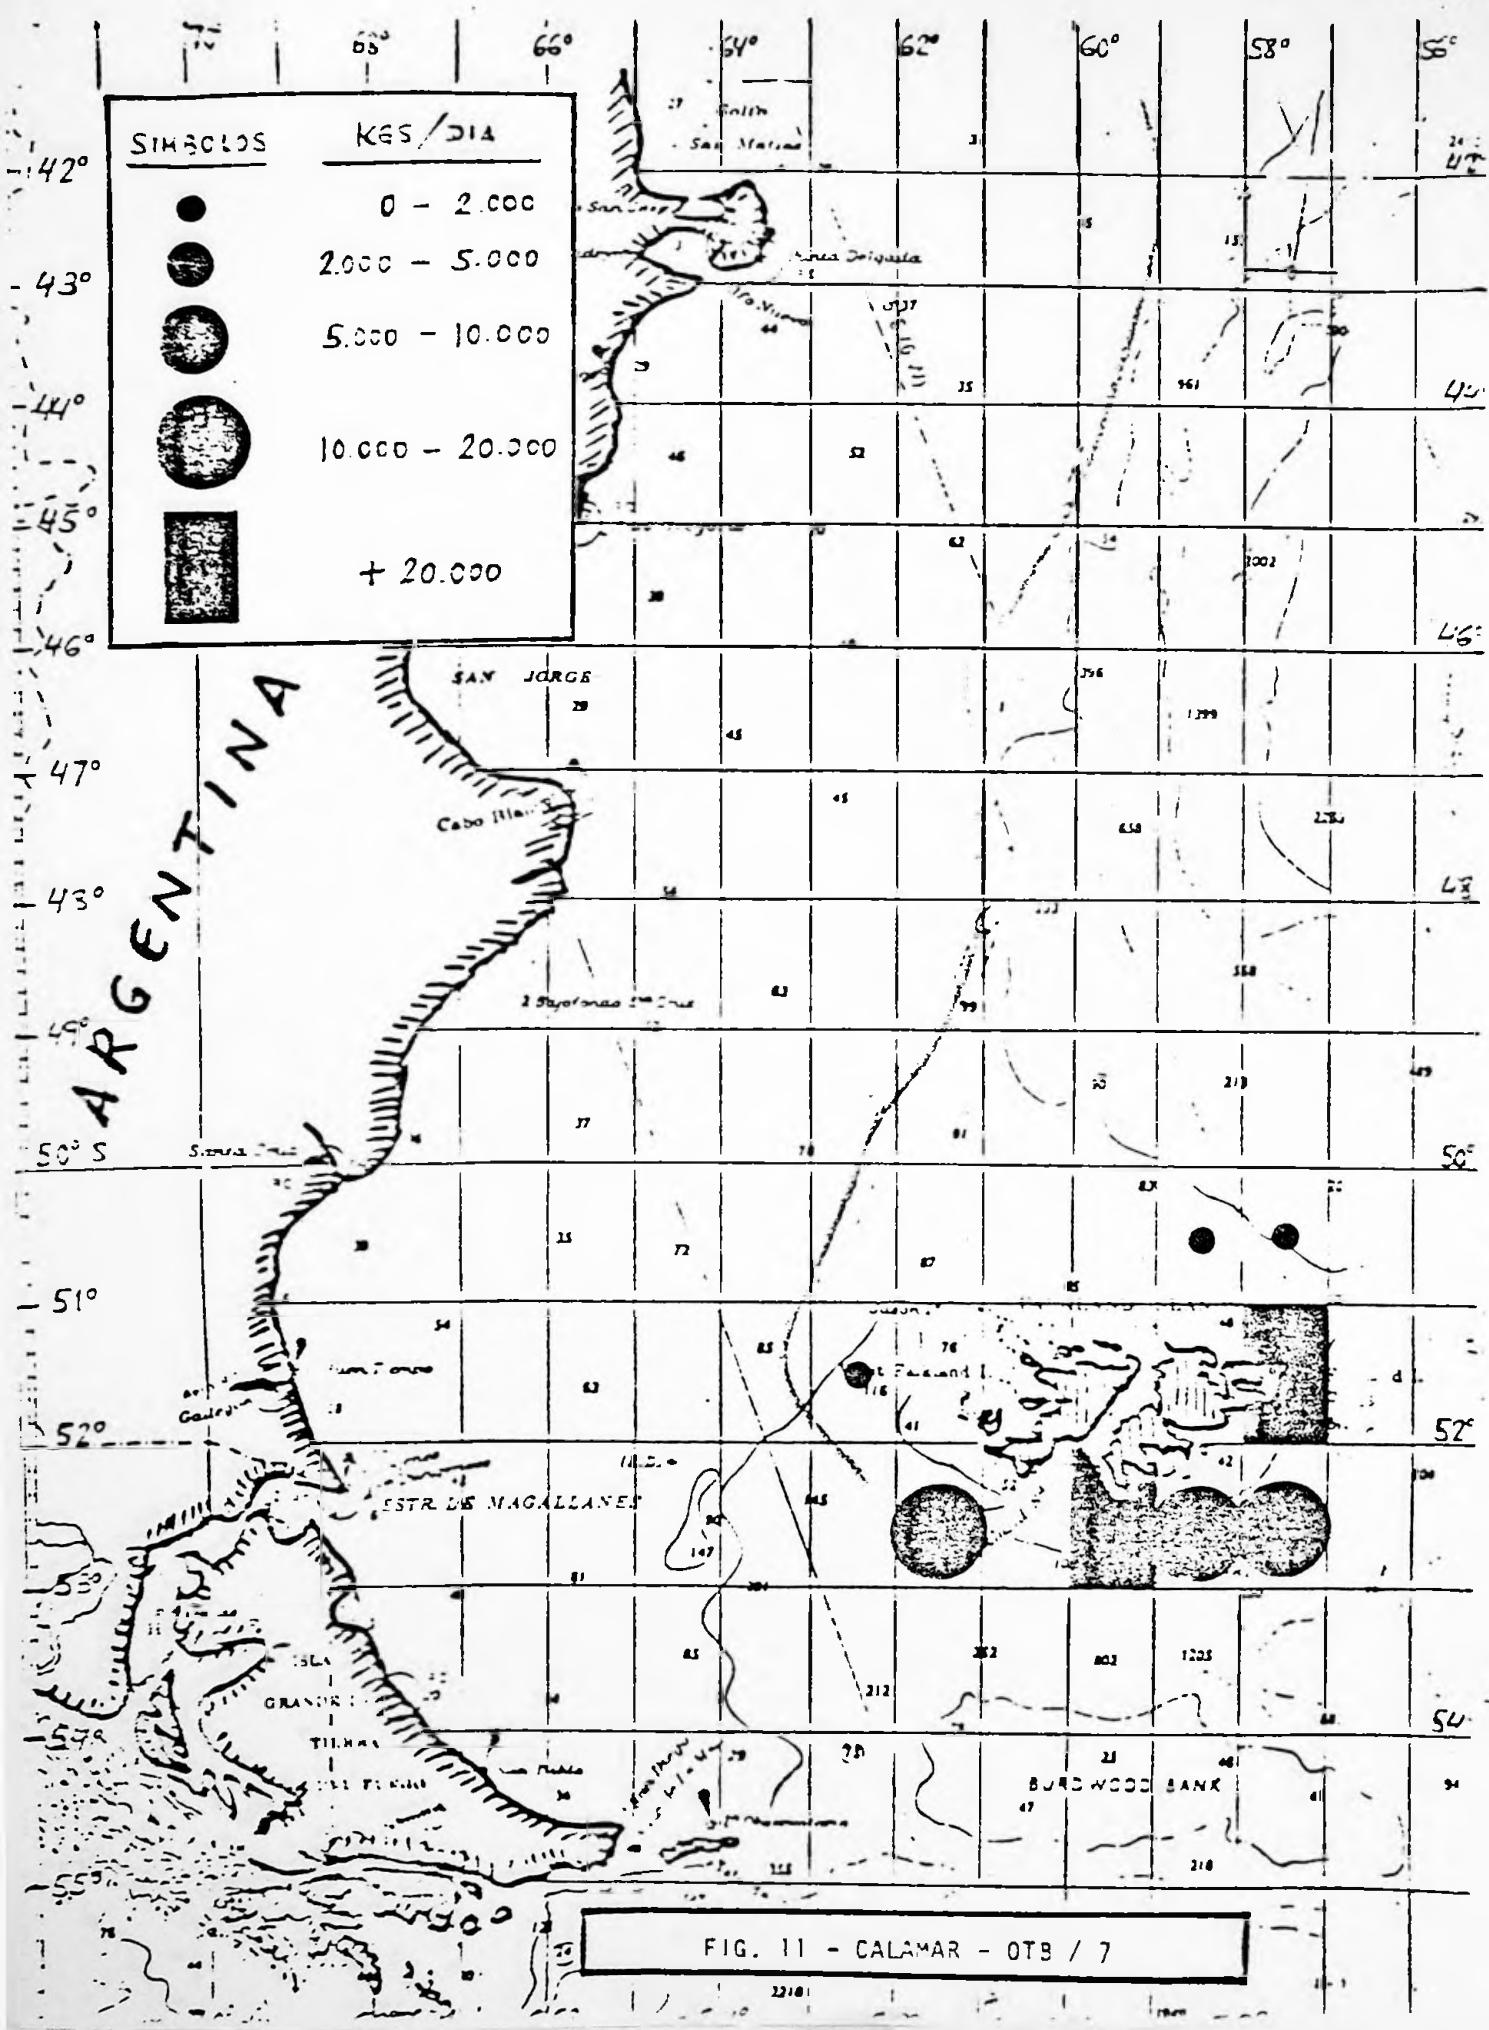

FIG. 7 - POTA - OTB / 7

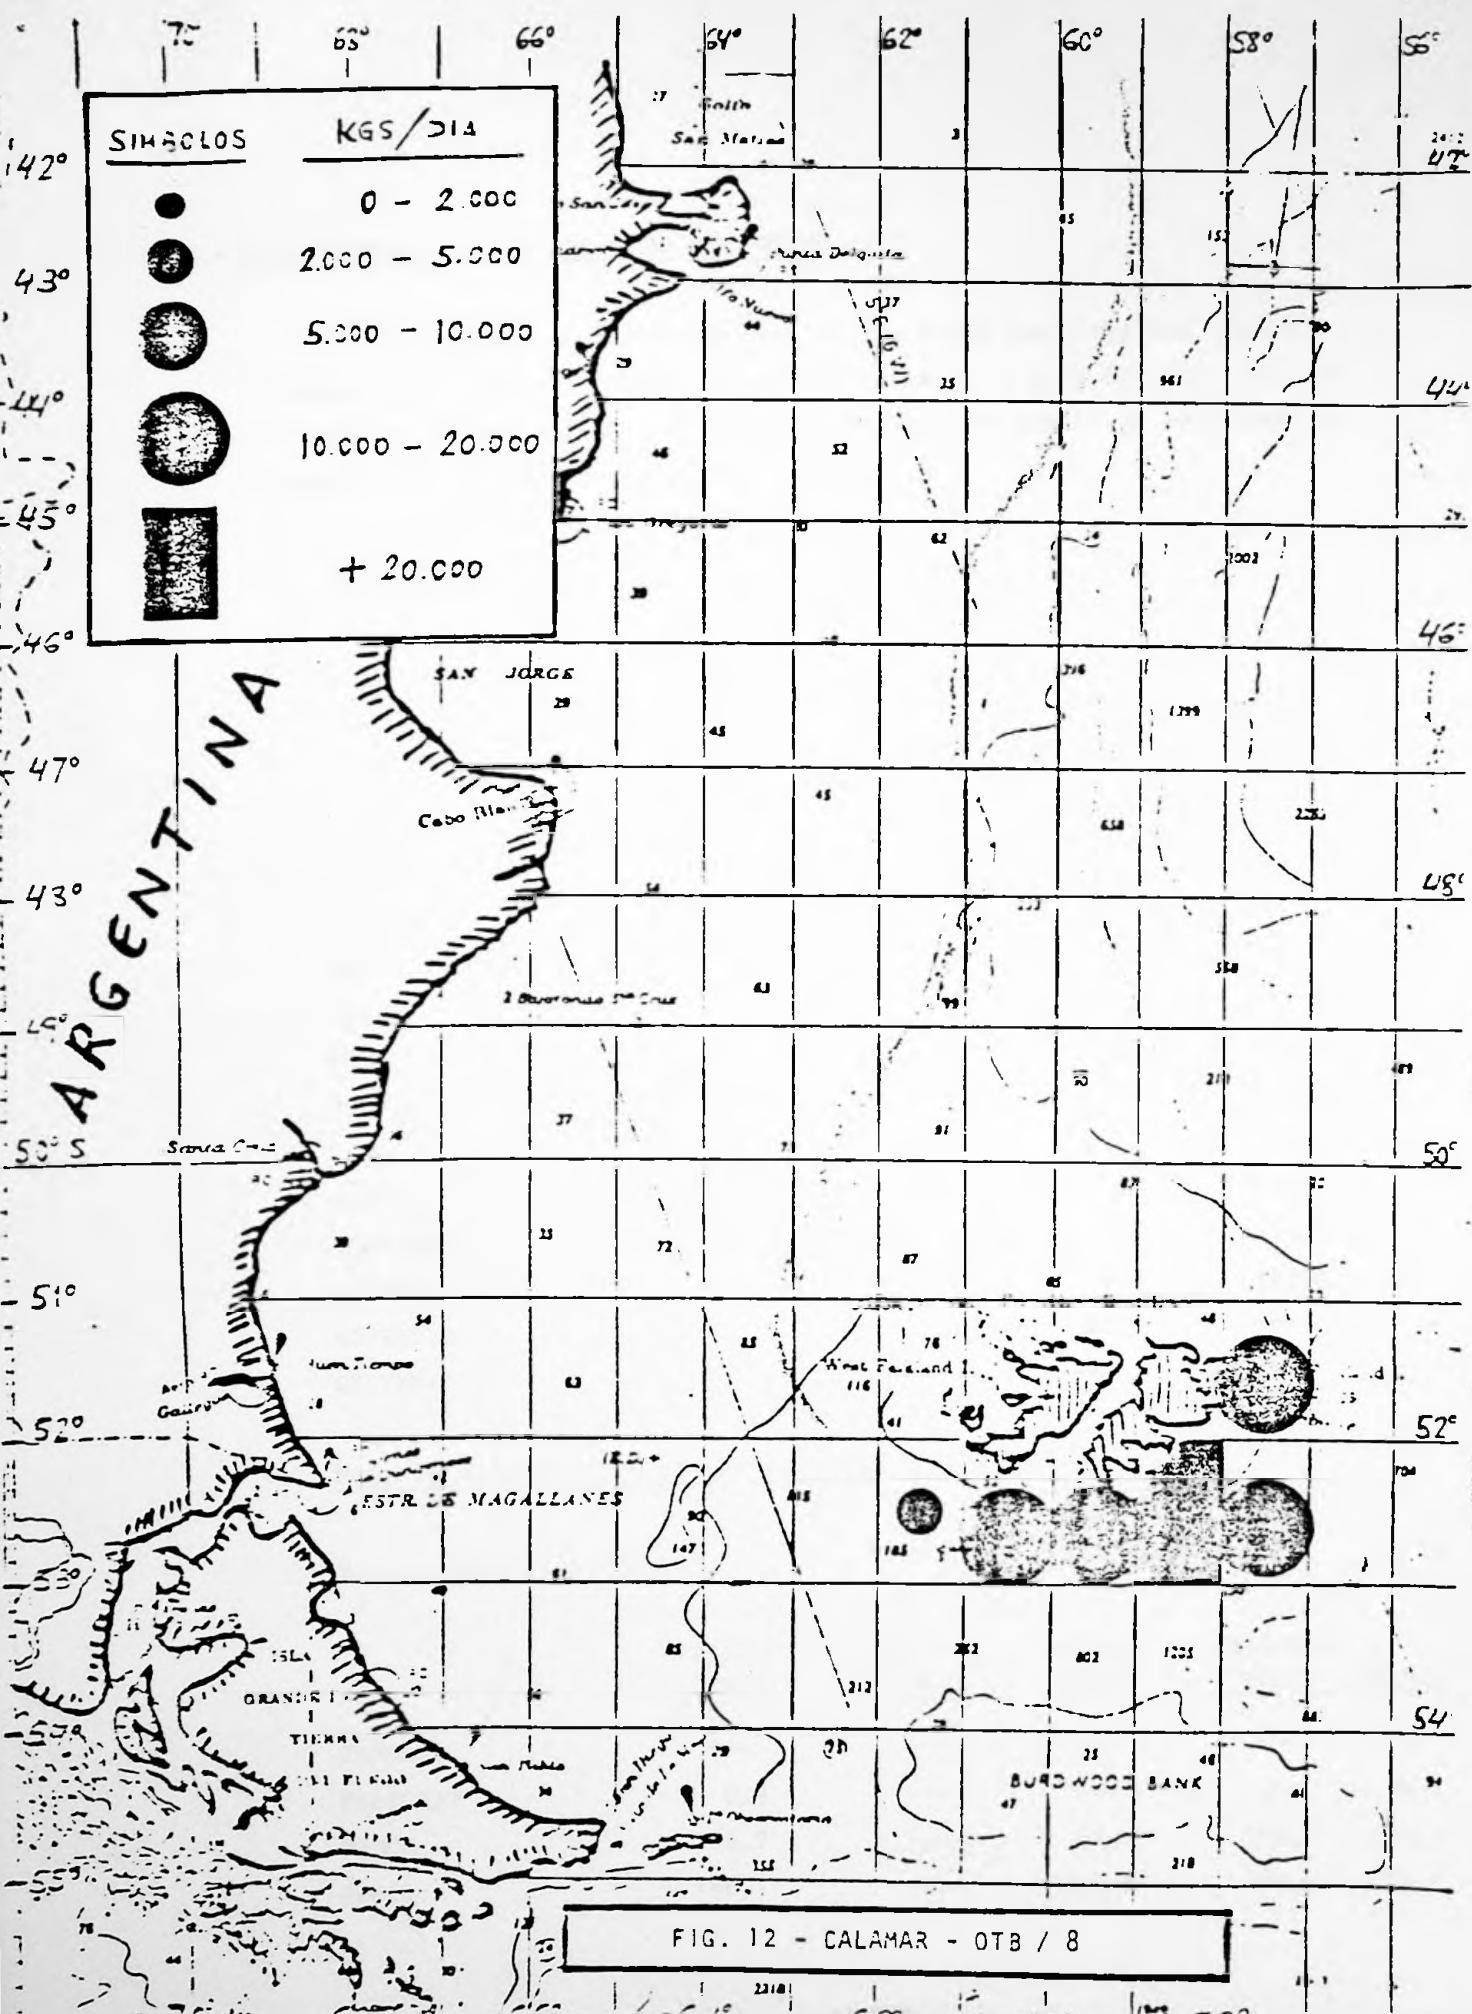

8.3. DISTRIBUTION AND ABUNDANCE OF LONG FINNED
 SQUID ("CALAMAR") PER VESSEL CATEGORY

9.- DISTRIBUTION OF THE CAPTURES PER MONTH

The distribution of the catches of the three main species ("pota", "calamar" and hake) per month along 1983, has been made for the total of the catches of the fleet, taking a representative sample of each boat -- cathegory depending on their GRT.

9.1. Size of the Sample Used

<u>MONTHS</u>	<u>VESSELS OTB-5</u>	<u>VESSELS OTB-6</u>	<u>VESSELS OTB-7</u>	<u>VESSELS OTB-8</u>
